
Several rounds of fiscal stimuli have been announced under the umbrella scheme of Atma Nirbhar Bharat mission in response to the COVID crisis. In this context, it is important that the policy interventions are aligned with the production structure of the economy so as to reap maximum benefits. The paper uses input-output analysis to identify the major sectors of the economy based on the sectoral multipliers. It also investigates into ‘leakages’, i.e., the change in intermediate imports associated with a unit change in domestic production. The interaction between linkages and leakages is analysed, which reveals two distinct patterns – in the case of services, higher imports are associated with higher domestic linkages, while the opposite holds for industry, i.e., higher intermediate imports are associated with lower domestic linkages. The paper also identifies the sectors for export promotion and the sectors where domestic capabilities need to be developed for supply chain resilience.
