Reserve Bank of India (Prudential Regulations on Basel III Capital Framework, Exposure Norms, Significant Investments, Classification, Valuation and Operation of Investment Portfolio Norms and Resource Raising Norms for All India Financial Institutions) Directions, 2021 - Draft

In exercise of the powers conferred by Section 45 L of the Reserve Bank of India Act, 1934, the Reserve Bank of India being satisfied that it is necessary and expedient in the public interest and in the interest of financial sector policy so to do, hereby, issues the Directions hereinafter specified.

Chapter I - Preliminary

1. **Short Title and Commencement**

   (a) These Directions shall be called Reserve Bank of India (Prudential Regulations on Basel III Capital Framework, Exposure Norms, Significant Investments, Classification, Valuation and Operation of Investment Portfolio Norms and Resource Raising Norms for All India Financial Institutions) Directions, 2021

   (b) These Directions shall come into effect on the day these are placed on the official website of the Reserve Bank of India.

2. **Applicability**

   These Directions shall be applicable to the All India Financial Institutions (AIFIs) regulated by Reserve Bank of India, viz. EXIM Bank, NABARD, NHB and SIDBI.
Chapter II - Basel III Capital Regulations

Part A: Guidelines on Minimum Capital Requirement

1. Introduction

1.1 While being essentially risk-based, the prudential regulation for various types of financial sector entities (banks, security firms, development finance institutions, non-banking financial entities) across the world tends to be broadly similar. Internationally, many development finance institutions have chosen to adopt Basel III Regulations because the micro-prudential elements of Basel standards generally measure and capitalise financial risks regardless of the entities that undertake them. Basel III strengthens the institution-level i.e. micro prudential regulation, with the intention to raise the resilience of individual financial institutions in periods of stress. Basel III standards have a macro prudential focus also, addressing system wide risks, which can build up across the banking/financial sector, as well as the pro-cyclical amplification of these risks over time. These standards mainly seek to raise the quality and level of capital to ensure that financial entities are better able to absorb losses on both a going concern and a gone concern basis, increase the risk coverage of the capital framework, introduce leverage ratio to serve as a backstop to the risk-based capital measure, raise the standards for the supervisory review process (Pillar 2) and public disclosures (Pillar 3) etc.

1.2 Over the years, the role of the AIFIs (EXIM Bank, NABARD, NHB & SIDBI) in the Indian financial system has undergone significant change reflecting the changes in their business models. As the Indian economy grows further, the AIFIs are increasingly being seen as key institutions to promote the flow of direct or indirect credit to the economic sectors they cater to. It has been decided, therefore, to extend Basel III Capital framework to the AIFIs as detailed in the following paragraphs.

2. Approach to Implementation and Effective Date

2.1 The AIFIs shall implement all the three Pillars of Basel III capital regulations. Under Pillar 1, the AIFIs shall adopt the standardized approaches for measurement of capital charge for credit risk and market risk. For operational risk, AIFIs shall adopt the Basic Indicator Approach. The AIFIs will implement other approaches as envisaged under Basel III as and when banks will adopt these approaches.

2.2 Basel III Capital Regulations- Landmarks for AIFIs: It has been decided to extend Basel III Capital Regulations to AIFIs as per the following timeline:

<table>
<thead>
<tr>
<th>Minimum capital ratios</th>
<th>April 1, 2022¹</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Common Equity Tier 1 (CET1)</td>
<td>5.5%</td>
</tr>
<tr>
<td>Capital conservation buffer (CCB)</td>
<td>2.5%</td>
</tr>
<tr>
<td>Minimum CET1+ CCB</td>
<td>8%</td>
</tr>
</tbody>
</table>

¹ For NHB, since the accounting year is July-June, the implementation shall commence on July 1, 2022
### Minimum capital ratios

<td>7%</td>
</tr>
<tr>
<td>Minimum Total Capital*</td>
<td>9%</td>
</tr>
<tr>
<td>Minimum Total Capital + CCB</td>
<td>11.5%</td>
</tr>
</tbody>
</table>

#### 3. Scope of Application of Capital Adequacy Framework

3.1 An AIFI shall comply with the capital adequacy ratio requirements at two levels:

(a) the consolidated (“Group”) level² capital adequacy ratio requirements, which measure the capital adequacy of an AIFI based on its capital strength and risk profile after consolidating the assets and liabilities of its subsidiaries / joint ventures / associates etc. except those engaged in insurance and any non-financial activities; and

(b) the standalone (“Solo”) level capital adequacy ratio requirements, which measure the capital adequacy of an AIFI based on its standalone capital strength and risk profile.

Accordingly, overseas operations of an AIFI through its branches will be covered in both the above scenarios.

3.2 For the purpose of these guidelines, the subsidiary is an enterprise that is controlled by another enterprise (known as the parent). AIFIs will follow the definition of ‘control’ as given in the applicable accounting standards.

3.3 Capital Adequacy at Group / Consolidated Level

3.3.1 All financial subsidiaries except subsidiaries engaged in insurance and any non-financial activities (both regulated and unregulated) should be fully consolidated for the purpose of capital adequacy. This would ensure assessment of capital adequacy at the group level, taking into account the risk profile of assets and liabilities of the consolidated subsidiaries.

3.3.2 The insurance and non-financial subsidiaries / joint ventures / associates etc. of an AIFI should not be consolidated for the purpose of capital adequacy. The equity and other regulatory capital investments in the insurance and non-financial subsidiaries will be deducted from consolidated regulatory capital of the group. Equity and other regulatory capital investments in the unconsolidated insurance and non-financial entities/subsidiaries of AIFIs (which also include joint ventures / associates of the parent AIFI) will be treated in terms of paragraphs 4.4.8 and 5.13.6 respectively.

3.3.3 All regulatory adjustments indicated in paragraph 4.4 are required to be made to the consolidated Common Equity Tier 1 capital of the parent AIFI as indicated therein.

3.3.4 Minority interest (i.e. non-controlling interest) and other capital issued out of consolidated subsidiaries as per paragraph 3.3.1 that is held by third parties will be recognized in the consolidated regulatory capital of the parent AIFI subject to certain conditions as stipulated in paragraph 4.3.

---

² A consolidated AIFI should maintain a minimum Capital to Risk-weighted Assets Ratio (CRAR) as applicable to an AIFI on an ongoing basis.
3.3.5 AIFIs should ensure that majority owned financial entities that are not consolidated for capital purposes and for which the investment in equity and other instruments eligible for regulatory capital status is deducted, meet their respective regulatory capital requirements. In case of any shortfall in the regulatory capital requirements in the unconsolidated entity, the shortfall shall be fully deducted from the Common Equity Tier 1 capital.

3.4 Capital Adequacy at Solo Level

3.4.1 While assessing the capital adequacy of an AIFI at solo level, all regulatory adjustments indicated in paragraph 4.4 are required to be made. In addition, investments in the capital instruments of the subsidiaries, which are consolidated in the consolidated financial statements of the group, will also have to be deducted from the corresponding capital instruments issued by the AIFI.

3.4.2 In case of any shortfall in the regulatory capital requirements in the unconsolidated entity (e.g. insurance subsidiary), the shortfall shall be fully deducted from the Common Equity Tier 1 capital.

4. Composition of Regulatory Capital

4.1 General

AIFIs are required to maintain a minimum Pillar 1 Capital to Risk-weighted Assets Ratio (CRAR) of 9% on an on-going basis (other than capital conservation buffer and countercyclical capital buffer etc.). The Reserve Bank will take into account the relevant risk factors and the internal capital adequacy assessments of each AIFI to ensure that the capital held by an AIFI is commensurate with the AIFI's overall risk profile. This would include, among others, the effectiveness of the AIFI’s risk management systems in identifying, assessing / measuring, monitoring and managing various risks including interest rate risk in the banking book, liquidity risk, concentration risk and residual risk. Accordingly, the Reserve Bank will consider prescribing a higher level of minimum capital ratio for each AIFI under the Pillar 2 framework on the basis of their respective risk profiles and their risk management systems. Further, in terms of the Pillar 2 requirements, AIFIs are expected to operate at a level well above the minimum requirement. An AIFI should compute Basel III capital ratios in the following manner:

\[
\text{Common Equity Tier 1 capital ratio} = \frac{\text{Common Equity Tier 1 Capital}}{\text{Credit Risk RWA}^* + \text{Market Risk RWA} + \text{Operational Risk RWA}}
\]

\[
\text{Tier 1 capital ratio} = \frac{\text{Eligible Tier 1 Capital}}{\text{Credit Risk RWA}^* + \text{Market Risk RWA} + \text{Operational Risk RWA}}
\]

\[
\text{Total Capital (CRAR#)} = \frac{\text{Eligible Total Capital}}{\text{Credit Risk RWA} + \text{Market Risk RWA} + \text{Operational Risk RWA}}
\]

* RWA = Risk weighted Assets;
# Capital to Risk Weighted Asset Ratio

4.2 Elements of Regulatory Capital and the Criteria for their Inclusion in the Definition of Regulatory Capital

4.2.1 Components of Capital

Total regulatory capital will consist of the sum of the following categories:
(i) Tier 1 Capital (going-concern capital\(^3\))
   
   (a) Common Equity Tier 1
   
   (b) Additional Tier 1

(ii) Tier 2 Capital (gone-concern capital)

4.2.2 Limits and Minima

(i) As a matter of prudence, it has been decided that AIFIs shall maintain a minimum total capital (MTC) of 9% of total risk weighted assets (RWAs) i.e. capital to risk weighted assets (CRAR). This will be further divided into different components as described under paragraphs 4.2.2(ii) to 4.2.2(vii).

(ii) Common Equity Tier 1 (CET1) capital must be at least 5.5% of risk-weighted assets (RWAs) i.e. for credit risk + market risk + operational risk on an ongoing basis.

(iii) Tier 1 capital must be at least 7% of RWAs on an ongoing basis. Thus, within the minimum Tier 1 capital, Additional Tier 1 capital can be admitted maximum at 1.5% of RWAs.

(iv) Total Capital (Tier 1 Capital plus Tier 2 Capital) must be at least 9% of RWAs on an ongoing basis. Thus, within the minimum CRAR of 9%, Tier 2 capital can be admitted maximum up to 2%.

(v) If an AIFI has complied with the minimum Common Equity Tier 1 and Tier 1 capital ratios, then the excess Additional Tier 1 capital can be admitted for compliance with the minimum CRAR of 9% of RWAs.

(vi) In addition to the minimum Common Equity Tier 1 capital of 5.5% of RWAs, AIFIs are also required to maintain a capital conservation buffer (CCB) of 2.5% of RWAs in the form of Common Equity Tier 1 capital. Details of operational aspects of CCB have been furnished in paragraph 15. Thus, with full implementation of capital ratios and CCB the capital requirements are summarised as follows:

<table>
<thead>
<tr>
<th>Regulatory Capital</th>
<th>As % to RWAs</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) Minimum Common Equity Tier 1 Ratio</td>
<td>5.5</td>
</tr>
<tr>
<td>(ii) Capital Conservation Buffer (comprised of Common Equity)</td>
<td>2.5</td>
</tr>
<tr>
<td>(iii) Minimum Common Equity Tier 1 Ratio plus Capital Conservation Buffer [(i)+(ii)]</td>
<td>8.0</td>
</tr>
<tr>
<td>(iv) Additional Tier 1 Capital</td>
<td>1.5</td>
</tr>
<tr>
<td>(v) Minimum Tier 1 Capital Ratio [(i) +(iv)]</td>
<td>7.0</td>
</tr>
<tr>
<td>(vi) Tier 2 Capital</td>
<td>2.0</td>
</tr>
<tr>
<td>(vii) Minimum Total Capital Ratio (MTC) [(v)+(vi)]</td>
<td>9.0</td>
</tr>
<tr>
<td>(viii) Minimum Total Capital Ratio plus Capital Conservation Buffer [(vii)+(ii)]</td>
<td>11.5</td>

\(^3\) From regulatory capital perspective, going-concern capital is the capital which can absorb losses without triggering bankruptcy of the AIFI. Gone-concern capital is the capital which will absorb losses only in a situation of liquidation of the AIFI.
For the purpose of all prudential exposure limits linked to capital funds, the ‘capital funds’ will be defined as the sum of all eligible Common Equity Tier 1 capital, Additional Tier 1 capital and Tier 2 capital, net of regulatory adjustments and deductions.

4.2.3 Common Equity Tier 1 Capital

4.2.3.1 Common Equity – AIIFs

A. Elements of Common Equity Tier 1 Capital

Elements of Common Equity component of Tier 1 capital will comprise the following:

(i) Common shares (paid-up equity capital) issued by the AIIFI which meet the criteria for classification as common shares for regulatory purposes as given in Annex 1;

(ii) Stock surplus (share premium) resulting from the issue of common shares;

(iii) Statutory reserves;

(iv) Capital reserves representing surplus arising out of sale proceeds of assets;

(v) Other disclosed free reserves, if any;

(vi) Balance in Profit & Loss Account at the end of the previous financial year;

(vii) Revaluation reserves\(^4\) at a discount of 55% subject to meeting the criteria prescribed in paragraph 4.4.8 (i);

(viii) Cumulative net loss upto the quarter end

(ix) AIIFs may reckon the profits in current financial year for CRAR calculation on a quarterly basis provided the incremental provisions made for non-performing assets at the end of any of the four quarters of the previous financial year have not deviated more than 25% from the average of the four quarters. The amount which can be reckoned would be arrived at by using the following formula:

\[EP_t = (NP_t - 0.25^*D^*t)\]

Where;

\[EP_t = \text{Eligible profit up to the quarter ‘t’ of the current financial year; } t \text{ varies from 1 to 4}\]

\(^4\) These reserves often serve as a cushion against unexpected losses, but they are less permanent in nature and cannot be considered as ‘Core Capital’. Revaluation reserves arise from revaluation of assets that are undervalued on the AIIFI’s books, typically AIIFI premises. The extent to which the revaluation reserves can be relied upon as a cushion for unexpected losses depends mainly upon the level of certainty that can be placed on estimates of the market values of the relevant assets, the subsequent deterioration in values under difficult market conditions or in a forced sale, potential for actual liquidation at those values, tax consequences of revaluation, etc. Therefore, it would be prudent to consider revaluation reserves at a discount of 55% while determining their value for inclusion in capital. Such reserves will have to be reflected on the face of the Balance Sheet as revaluation reserves.
NP_t = Net profit up to the quarter ‘t’

D = average annual dividend paid during last three years

(x) While calculating capital adequacy at the consolidated level, common shares issued by consolidated subsidiaries of the AIFI and held by third parties (i.e. minority interest) which meet the criteria for inclusion in Common Equity Tier 1 capital (refer to paragraph 4.3.2); and

(xi) Less: Regulatory adjustments / deductions applied in the calculation of Common Equity Tier 1 capital [i.e. to be deducted from the sum of items (i) to (x)].

**B. Criteria for Classification as Common Shares for Regulatory Purposes**

Common Equity is recognised as the highest quality component of capital and is the primary form of funding which ensures that an AIFI remains solvent. Therefore, under Basel III, common shares to be included in Common Equity Tier 1 capital must meet the criteria as furnished in Annex 1.

4.2.4 Additional Tier 1 Capital

4.2.4.1 Additional Tier 1 Capital – AIFIs

**A. Elements of Additional Tier 1 Capital**

Additional Tier 1 capital will consist of the sum of the following elements:

(i) Perpetual Non-Cumulative Preference Shares (PNCPS), which comply with the regulatory requirements as specified in Annex 2;

(ii) Stock surplus (share premium) resulting from the issue of instruments included in Additional Tier 1 capital;

(iii) Debt capital instruments eligible for inclusion in Additional Tier 1 capital, which comply with the regulatory requirements as specified in Annex 3;

(iv) Any other type of instrument generally notified by the Reserve Bank from time to time for inclusion in Additional Tier 1 capital;

(v) While calculating capital adequacy at the consolidated level, Additional Tier 1 instruments issued by consolidated subsidiaries of the AIFI and held by third parties which meet the criteria for inclusion in Additional Tier 1 capital (refer to paragraph 4.3.3); and

(vi) Less: Regulatory adjustments / deductions applied in the calculation of Additional Tier 1 capital [i.e. to be deducted from the sum of items (i) to (v)].

**B. Criteria for Classification as Additional Tier 1 Capital for Regulatory Purposes**

Under Basel III, the criteria for instruments to be included in Additional Tier 1 capital have been modified to improve their loss absorbency as indicated in Annex 2, 3 and 15. Criteria for inclusion of Perpetual Non-Cumulative Preference Shares (PNCPS) in Additional Tier 1 Capital are furnished in Annex 2. Criteria for inclusion of Perpetual Debt Instruments (PDI) in Additional Tier 1 Capital are furnished in Annex 3. Annex 14 contains criteria for loss absorption through conversion / write-down / write-off of Additional Tier 1 instruments on breach of the pre-specified trigger and of all non-common equity regulatory capital instruments at the point of non-viability.
4.2.5 Elements of Tier 2 Capital

Under Basel III, there will be a single set of criteria governing all Tier 2 debt capital instruments.

4.2.5.1 Tier 2 Capital - AIFIs

A. Elements of Tier 2 Capital

(i) General Provisions and Loss Reserves

a. Provisions or loan-loss reserves held against future, presently unidentified losses, which are freely available to meet losses which subsequently materialize, will qualify for inclusion within Tier 2 capital. Accordingly, General Provisions on Standard Assets, Floating Provisions\(^5\), incremental provisions in respect of unhedged foreign currency exposures\(^6\), Provisions held for Country Exposures, Investment Reserve Account, excess provisions which arise on account of sale of NPAs and ‘countercyclical provisioning buffer’ will qualify for inclusion in Tier 2 capital. However, these items together will be admitted as Tier 2 capital up to a maximum of 1.25% of the total credit risk-weighted assets under the standardized approach.

b. Provisions ascribed to identified deterioration of particular assets or loan liabilities, whether individual or grouped should be excluded. Accordingly, for instance, specific provisions on NPAs, both at individual account or at portfolio level, provisions in lieu of diminution in the fair value of assets in the case of restructured advances, provisions against depreciation in the value of investments will be excluded.

(ii) Debt Capital Instruments issued by the AIFIs;

(iii) Preference Share Capital Instruments [Perpetual Cumulative Preference Shares (PCPS) / Redeemable Non-Cumulative Preference Shares (RNCPS) / Redeemable Cumulative Preference Shares (RCPS)] issued by the AIFIs;

(iv) Stock surplus (share premium) resulting from the issue of instruments included in Tier 2 capital;

(v) While calculating capital adequacy at the consolidated level, Tier 2 capital instruments issued by consolidated subsidiaries of the AIFI and held by third parties which meet the criteria for inclusion in Tier 2 capital (refer to paragraph 4.3.4);

(vi) Revaluation reserves at a discount of 55% subject to it not being included under CET1 as prescribed in paragraph 4.2.3.1 (A) (vii)

(vii) Any other type of instrument generally notified by the Reserve Bank from time to time for inclusion in Tier 2 capital; and

\(^5\) AIFIs will have the option to net off such provisions from Gross NPAs to arrive at Net NPA, or reckoning it as part of their Tier 2 capital as per circular DBOD.NO.BP.BC.33/21.04.048/2009-10 dated August 27, 2009 addressed to banks.

\(^7\) Please refer to circular DBOD.No.BP.BC.87/21.04.048/2010-11 dated April 21, 2011 on provisioning coverage ratio (PCR) for advances addressed to banks.
B. Criteria for Classification as Tier 2 Capital for Regulatory Purposes

Under Basel III, the criteria for instruments\(^8\) to be included in Tier 2 capital have been modified to improve their loss absorbency as indicated in Annex 4, 5 and 15. Criteria for inclusion of Debt Capital Instruments as Tier 2 capital are furnished in Annex 4. Criteria for inclusion of Perpetual Cumulative Preference Shares (PCPS) / Redeemable Non-Cumulative Preference Shares (RNCPS) / Redeemable Cumulative Preference Shares (RCPS) as part of Tier 2 capital are furnished in Annex 5. Annex 14 contains criteria for loss absorption through conversion / write-off of all non-common equity regulatory capital instruments at the point of non-viability.

4.3 Recognition of Minority Interest (i.e. Non-Controlling Interest) and Other Capital Issued out of Consolidated Subsidiaries that is Held by Third Parties

4.3.1 Under Basel III, the minority interest is recognised only in cases where there is considerable explicit or implicit assurance that the minority interest which is supporting the risks of the subsidiary would be available to absorb the losses at the consolidated level. Accordingly, the portion of minority interest which supports risks in a subsidiary that is a bank will be included in group’s Common Equity Tier 1. Consequently, minority interest in the subsidiaries which are not banks will not be included in the regulatory capital of the group. In other words, the proportion of surplus capital which is attributable to the minority shareholders would be excluded from the group’s Common Equity Tier 1 capital.

4.3.2 Treatment of Minority Interest Corresponding to Common Shares Issued by Consolidated Subsidiaries

Minority interest arising from the issue of common shares by a fully consolidated subsidiary of the AIFI may receive recognition in Common Equity Tier 1 capital only if: (a) the instrument giving rise to the minority interest would, if issued by the AIFI, meet all of the criteria for classification as common shares for regulatory capital purposes as stipulated in Annex 1; and (b) the subsidiary that issued the instrument is itself a bank\(^9\). The amount of minority interest meeting the criteria above that will be recognised in consolidated Common Equity Tier 1 capital will be calculated as follows:

(i) Total minority interest meeting the two criteria above minus the amount of the surplus Common Equity Tier 1 capital of the subsidiary attributable to the minority shareholders.

(ii) Surplus Common Equity Tier 1 capital of the subsidiary is calculated as the Common Equity Tier 1 of the subsidiary minus the lower of: (a) the minimum Common Equity Tier 1 capital requirement of the subsidiary plus the capital conservation buffer (i.e. 8.0% of risk weighted assets) and (b) the portion of the consolidated minimum Common Equity Tier 1 capital requirement plus the capital conservation buffer (i.e. 8.0% of consolidated risk weighted assets) that relates to the subsidiary.

---

\(^8\) Please also refer circular DBOD BP BC No.75/21.06.001/2010-11 dated January 20, 2011 on ‘Regulatory Capital Instruments – Step up Option’ doing away with step up option. AIFIs may also refer to the BCBS Press Release dated September 12, 2010 indicating announcements made by the Group of Governors and Heads of Supervision on higher global minimum capital standards.

\(^9\) For the purposes of this paragraph, All India Financial Institutions, Non-banking Financial Companies regulated by RBI and Primary Dealers will be considered to be a bank.
The amount of the surplus Common Equity Tier 1 capital that is attributable to the minority shareholders is calculated by multiplying the surplus Common Equity Tier 1 by the percentage of Common Equity Tier 1 that is held by minority shareholders.

4.3.3 Treatment of Minority Interest Corresponding to Tier 1 Qualifying Capital Issued by Consolidated Subsidiaries

Tier 1 capital instruments issued by a fully consolidated subsidiary of the AIFI to third party investors (including amounts under paragraph 4.3.2) may receive recognition in Tier 1 capital only if the instruments would, if issued by the AIFI, meet all of the criteria for classification as Tier 1 capital. The amount of this capital that will be recognised in Tier 1 capital will be calculated as follows:

(i) Total Tier 1 capital of the subsidiary issued to third parties minus the amount of the surplus Tier 1 capital attributable to the third party investors.

(ii) Surplus Tier 1 capital of the subsidiary is calculated as the Tier 1 capital of the subsidiary minus the lower of: (a) the minimum Tier 1 capital requirement of the subsidiary plus the capital conservation buffer (i.e. 9.5% of risk weighted assets) and (b) the portion of the consolidated minimum Tier 1 capital requirement plus the capital conservation buffer (i.e. 9.5% of consolidated risk weighted assets) that relates to the subsidiary.

(iii) The amount of the surplus Tier 1 capital that is attributable to the third party investors is calculated by multiplying the surplus Tier 1 capital by the percentage of Tier 1 capital that is held by third party investors.

The amount of this Tier 1 capital that will be recognised in Additional Tier 1 capital will exclude amounts recognised in Common Equity Tier 1 capital under paragraph 4.3.2.

4.3.4 Treatment of Minority Interest Corresponding to Tier 1 Capital and Tier 2 Capital Qualifying Capital Issued by Consolidated Subsidiaries

Total capital instruments (i.e. Tier 1 and Tier 2 capital instruments) issued by a fully consolidated subsidiary of the AIFI to third party investors (including amounts under paragraphs 4.3.2 and 4.3.3) may receive recognition in Total Capital only if the instruments would, if issued by the AIFI, meet all of the criteria for classification as Tier 1 or Tier 2 capital. The amount of this capital that will be recognised in consolidated Total Capital will be calculated as follows:

(i) Total capital instruments of the subsidiary issued to third parties minus the amount of the surplus Total Capital of the subsidiary attributable to the third party investors.

(ii) Surplus Total Capital of the subsidiary is calculated as the Total Capital of the subsidiary minus the lower of: (a) the minimum Total Capital requirement of the subsidiary plus the capital conservation buffer (i.e. 11.5% of risk weighted assets) and (b) the portion of the consolidated minimum Total Capital requirement plus the capital conservation buffer (i.e. 11.5% of consolidated risk weighted assets) that relates to the subsidiary.

(iii) The amount of the surplus Total Capital that is attributable to the third party investors is calculated by multiplying the surplus Total Capital by the percentage of Total Capital that is held by third party investors.

The amount of this Total Capital that will be recognised in Tier 2 capital will exclude amounts recognised in Common Equity Tier 1 capital under paragraph 4.3.2 and amounts recognised in Additional Tier 1 under paragraph 4.3.3.
4.3.5 An illustration of calculation of minority interest and other capital issued out of consolidated subsidiaries that is held by third parties is furnished in Annex 15.

4.4 Regulatory Adjustments / Deductions
The following paragraphs deal with the regulatory adjustments / deductions which will be applied to regulatory capital both at solo and consolidated level.

4.4.1 Goodwill and all Other Intangible Assets
(i) Goodwill and all other intangible assets should be deducted from Common Equity Tier 1 capital including any goodwill included in the valuation of significant investments in the capital of other financial and insurance entities which are outside the scope of regulatory consolidation. In terms of AS 23 – Accounting for investments in associates, goodwill/capital reserve arising on the acquisition of an associate by an investor should be included in the carrying amount of investment in the associate but should be disclosed separately. Therefore, if the acquisition of equity interest in any associate involves payment which can be attributable to goodwill, this should be deducted from the Common Equity Tier 1 of the AIFI.

(ii) The full amount of the intangible assets is to be deducted net of any associated deferred tax liabilities which would be extinguished if the intangible assets become impaired or derecognized under the relevant accounting standards. For this purpose, the definition of intangible assets would be in accordance with the Indian accounting standards. Losses in the current period and those brought forward from previous periods should also be deducted from Common Equity Tier 1 capital, if not already deducted.

(iii) Application of these rules at consolidated level would mean deduction of any goodwill and other intangible assets from the consolidated Common Equity which is attributed to the Balance Sheets of subsidiaries, in addition to deduction of goodwill and other intangible assets which pertain to the solo AIFI.

4.4.2 Deferred Tax Assets (DTAs)\(^*\)
(i) Deferred tax assets (DTAs) associated with accumulated losses and other such assets should be deducted in full from CET1 capital.

(ii) DTAs which relate to timing differences (other than those related to accumulated losses) may, instead of full deduction from CET1 capital, be recognised in the CET1 capital up to 10% of an AIFI’s CET1 capital, at the discretion of AIFIs [after the application of all regulatory adjustments mentioned from paragraphs 4.4.1 to 4.4.8.2 (C) (ii) of this Chapter].

(iii) Further, the limited recognition of DTAs as at (ii) above along with limited recognition of significant investments in the common shares of unconsolidated financial (i.e. financial and insurance) entities in terms of paragraph 4.4.8.2(C) (iii) of this Chapter taken together must not exceed 15% of the CET1 capital, calculated after all regulatory adjustments set out from paragraphs 4.4.1 to 4.4.8 of this Chapter. However, AIFIs shall ensure that the CET1 capital arrived at after application of 15% limit should in no case result in recognising any item more than the 10% limit

\(^*\) Please refer to circular DBR.No.BP.BC.83/21.06.2015-16 dated March 1, 2016 on “Master Circular – Basel III Capital Regulations – Revision” addressed to banks
applicable individually.

(iv) The amount of DTAs which is to be deducted from CET1 capital may be netted with associated deferred tax liabilities (DTLs) provided that:

- both the DTAs and DTLs relate to taxes levied by the same taxation authority and offsetting is permitted by the relevant taxation authority;
- the DTLs permitted to be netted against DTAs must exclude amounts that have been netted against the deduction of goodwill, intangibles and defined benefit pension assets; and
- the DTLs must be allocated on a pro rata basis between DTAs subject to deduction from CET1 capital as at (i) and (ii) above.

(v) The amount of DTAs which is not deducted from CET1 capital (in terms of para (ii) above) will be risk weighted at 250% as in the case of significant investments in common shares not deducted from AIFI’s CET1 capital as indicated in paragraph 4.4.8 (C)(iii) of this Chapter.

(vi) Where the DTL is in excess of the DTA (excluding DTA associated with accumulated losses), the excess shall neither be adjusted against item (i) nor added to Common Equity Tier 1 capital.

(vii) Application of these rules at consolidated level would mean deduction of DTAs from the consolidated Common Equity which is attributed to the subsidiaries, in addition to deduction of DTAs which pertain to the solo AIFI.

4.4.3 Cash Flow Hedge Reserve

(i) The amount of the cash flow hedge reserve which relates to the hedging of items that are not fair valued on the balance sheet (including projected cash flows) should be derecognised in the calculation of Common Equity Tier 1. This means that positive amounts should be deducted and negative amounts should be added back. This treatment specifically identifies the element of the cash flow hedge reserve that is to be derecognised for prudential purposes. It removes the element that gives rise to artificial volatility in Common Equity, as in this case the reserve only reflects one half of the picture (the fair value of the derivative, but not the changes in fair value of the hedged future cash flow).

(ii) Application of these rules at consolidated level would mean derecognition of cash flow hedge reserve from the consolidated Common Equity which is attributed to the subsidiaries, in addition to derecognition of cash flow hedge reserve pertaining to the solo AIFI.

4.4.4 Gain-on-Sale Related to Securitisation Transactions

(i) As per Basel III rule text, banks are required to derecognise in the calculation of Common Equity Tier 1 capital, any increase in equity capital resulting from a securitisation transaction, such as that associated with expected future margin income (FMI) resulting in a gain-on-sale. However, as per existing guidelines on securitization of standard assets issued by RBI, AIFIs are not permitted to recognise the gain-on-sale in the P&L account including cash profits. Therefore, there is no need for any deduction on account of gain-on-sale on securitization. Similarly, AIFIs are allowed to amortise the profit including cash profit over the period of the securities issued by the SPV. However, if an AIFI is following an accounting practice which in substance results in recognition of realized or unrealized gains at the inception of the securitization transactions, the treatment stipulated as per Basel III
rule text as indicated in the beginning of the paragraph would be applicable.

(ii) Application of these rules at consolidated level would mean deduction of gain-on-sale from the consolidated Common Equity which is recognized by the subsidiaries in their P&L and/or equity, in addition to deduction of any gain-on-sale recognised by the AIFI at the solo level.

4.4.5 Cumulative Gains and Losses due to Changes in Own Credit Risk on Fair Valued Financial Liabilities

(i) AIFIs are required to derecognise in the calculation of Common Equity Tier 1 capital, all unrealised gains and losses which have resulted from changes in the fair value of liabilities that are due to changes in the AIFI’s own credit risk. In addition, with regard to derivative liabilities, derecognise all accounting valuation adjustments arising from the AIFI’s own credit risk. The offsetting between valuation adjustments arising from the AIFI’s own credit risk and those arising from its counterparties’ credit risk is not allowed. If an AIFI values its derivatives and securities financing transactions (SFTs) liabilities taking into account its own creditworthiness in the form of debit valuation adjustments (DVAs), then the AIFI is required to deduct all DVAs from its Common Equity Tier 1 capital, irrespective of whether the DVAs arises due to changes in its own credit risk or other market factors. Thus, such deduction also includes the deduction of initial DVA at inception of a new trade. In other words, though an AIFI will have to recognize a loss reflecting the credit risk of the counterparty (i.e. credit valuation adjustments-CVA), the AIFI will not be allowed to recognize the corresponding gain due to its own credit risk.

(ii) Application of these rules at consolidated level would mean derecognition of unrealised gains and losses which have resulted from changes in the fair value of liabilities that are due to changes in the subsidiaries’ credit risk, in the calculation of consolidated Common Equity Tier 1 capital, in addition to derecognition of any such unrealised gains and losses attributed to the AIFI at the solo level.

4.4.6 Defined Benefit Pension Fund Assets and Liabilities

(i) Defined benefit pension fund liabilities, as included on the balance sheet, must be fully recognised in the calculation of Common Equity Tier 1 capital (i.e. Common Equity Tier 1 capital cannot be increased through derecognising these liabilities). For each defined benefit pension fund trust that is an asset on the balance sheet, the asset should be deducted in the calculation of Common Equity Tier 1 net of any associated deferred tax liability which would be extinguished if the asset should become impaired or derecognised under the relevant accounting standards.

(ii) Application of these rules at consolidated level would mean deduction of defined benefit pension fund assets and recognition of defined benefit pension fund liabilities pertaining to subsidiaries in the consolidated Common Equity Tier 1, in addition to those pertaining to the solo AIFI.

(iii) The entire amount of unamortized expenditure (if any) towards this head should be deducted from common equity Tier 1 capital for the purpose of capital adequacy ratios.

4.4.7 Treatment of revaluation reserves & foreign currency translation reserve

11 It includes other defined employees’ funds also.
(i) Revaluation reserves arising out of change in the carrying amount of an AIFI’s property consequent upon its revaluation may, at the discretion of AIFIs, be reckoned as CET1 capital at a discount of 55%, instead of as Tier 2 capital, subject to meeting the following conditions:

- AIFI is able to sell the property readily at its own will and there is no legal impediment in selling the property;
- the revaluation reserves are shown under Schedule: Reserves & Surplus in the Balance Sheet of the AIFI;
- revaluations are realistic, in accordance with Indian Accounting Standards.
- valuations are obtained, from two independent valuers, at least once in every 3 years; where the value of the property has been substantially impaired by any event, these are to be immediately revalued and appropriately factored into capital adequacy computations;
- the external auditors of the AIFI have not expressed a qualified opinion on the revaluation of the property;
- the instructions on valuation of properties and other specific requirements as mentioned in the circular DBOD.BP.BC.No.50/21.04.018/2006-07 January 4, 2007 on ‘Valuation of Properties - Empanelment of Valuers’ are strictly adhered to.

(ii) AIFIs may, at their discretion, reckon foreign currency translation reserve arising due to translation of financial statements of their foreign operations in terms of Accounting Standard (AS) 11 as CET1 capital at a discount of 25% subject to meeting the following conditions:

- the FCTR is shown under Schedule: Reserves & Surplus in the Balance Sheet of the AIFI;
- the external auditors of the AIFI have not expressed a qualified opinion on the FCTR.

4.4.8 Investments in the Capital of Banking, Financial and Insurance Entities

4.4.8.1 Limits on an AIFI’s Investments in the Capital of Banking, Financial and Insurance Entities

(i) An AIFI’s investment in the capital instruments issued by banking, financial and insurance entities is subject to the following limits:

(a) An AIFI’s investments in the capital instruments issued by banking, financial and insurance entities should not exceed 10% of its capital funds, but after all deductions mentioned in paragraph 4 (upto paragraph 4.4.8).

(b) AIFIs should not acquire any fresh stake in a bank’s/AIFI’s equity shares, if by such acquisition, the investing AIFI’s holding exceeds 5% of the investee bank’s/ AIFI’s equity capital.

---

12 Please refer to circular DBR.No.BP.BC.83/21.06.2015-16 dated March 1, 2016 on “Master Circular – Basel III Capital Regulations – Revision addressed to banks

13 These rules will be applicable to an AIFI’s equity investments in bank and financial entities, even if such investments are exempted from ‘capital market exposure’ limit.
(c) An AIFI’s equity investment in a single company /non-financial/commercial entity that is made in conformity with its statutory mandate shall not exceed 49 per cent of the equity of the investee company/entity. An AIFI can hold up to 49 per cent of equity of a company as a pledgee. However, if the AIFI ends up acquiring this in satisfaction of its claims, it shall be brought down below 10 per cent limit within three years.

(d) Equity investment by an AIFI in a subsidiary company, financial services company, financial institution, stock and other exchanges should not exceed 10% of the AIFI's paid-up share capital and reserves.

(e) Equity investment by an AIFI in companies engaged in non-financial services activities would be subject to a limit of 10% of the investee company’s paid up share capital or 10% of the AIFI’s paid up share capital and reserves, whichever is less.

(f) Equity investments in any non-financial services company held by (a) an AIFI/bank; (b) entities which are AIFI’s subsidiaries, associates or joint ventures or entities directly or indirectly controlled by the AIFI; and (c) mutual funds managed by AMCs controlled by the AIFI should in the aggregate not exceed 20% of the investee company’s paid up share capital.

(g) An AIFI’s equity investments in subsidiaries and other entities that are engaged in financial services activities together with equity investments in entities engaged in non-financial services activities should not exceed 20% of the AIFI’s paid-up share capital and reserves. The cap of 20% would not apply for investments classified under ‘Held for Trading’ category and which are not held beyond 90 days.

(ii) An indicative list of institutions which may be deemed to be financial institutions other than banks and insurance companies for capital adequacy purposes is as under:

- Asset Management Companies of Mutual Funds / Venture Capital Funds / Private Equity Funds etc;
- Non-Banking Finance Companies;
- Housing Finance Companies;
- Primary Dealers;
- Merchant Banking Companies;
- Entities engaged in activities which are ancillary to the business of banking under the B.R. Act, 1949; and
- Central Counterparties (CCPs).

(iii) Investments made by a banking subsidiary/ associate in the equity or non-equity regulatory capital instruments issued by its parent AIFI should be deducted from such subsidiary's regulatory capital following corresponding deduction approach, in its capital adequacy assessment on a solo basis. The regulatory treatment of investment by the non-banking financial subsidiaries / associates in the parent AIFI's regulatory capital would, however, be governed by the applicable regulatory capital norms of the respective regulators of such subsidiaries / associates.

4.4.8.2 Treatment of an AIFI’s Investments in the Capital Instruments Issued by Banking, Financial and Insurance Entities within Limits

The investment of AIFIs in the regulatory capital instruments of other financial entities contributes to the inter-connectedness amongst the financial institutions. In addition, these
investments also amount to double counting of capital in the financial system. Therefore, these investments have been subjected to stringent treatment in terms of deduction from respective tiers of regulatory capital. A schematic representation of treatment of AIFIs’ investments in capital instruments of financial entities is shown in Figure 1 below. Accordingly, all investments in the capital instruments issued by banking, financial and insurance entities within the limits mentioned in paragraph 4.4.8.1 will be subject to the following rules:

![Figure 1: Investments in the Capital Instruments of Banking, Financial and Insurance Entities](image)

**Figure 1: Investments in the Capital Instruments of Banking, Financial and Insurance Entities that are outside the scope of regulatory consolidation**

(A) Reciprocal Cross- Holdings in the Capital of Banking, Financial and Insurance Entities

Reciprocal cross holdings of capital might result in artificially inflating the capital position of AIFIs. Such holdings of capital will be fully deducted. AIFIs must apply a "corresponding deduction approach" to such investments in the capital of other banks, other financial institutions and insurance entities. This means the deduction should be applied to the same

---

14 For this purpose, investments held in AFS / HFT category may be reckoned at their market values, whereas, those held in HTM category may be reckoned at values appearing in the Balance sheet of the AIFI.
component of capital (Common Equity, Additional Tier 1 and Tier 2 capital) for which the capital would qualify if it was issued by the AIFI itself. For this purpose, a holding will be treated as reciprocal cross holding if the investee entity has also invested in any class of AIFI’s capital instruments which need not necessarily be the same as the AIFI’s holdings.

(B) Investments in the Capital of Banking, Financial and Insurance Entities which are outside the Scope of Regulatory Consolidation and where the AIFI does not Own more than 10% of the Issued Common Share Capital of the Entity

(i) The regulatory adjustment described in this section applies to investments in the capital of banking, financial and insurance entities that are outside the scope of regulatory consolidation and where the AIFI does not own more than 10% of the issued common share capital of the entity. In addition:

(a) Investments include direct, indirect\(^*\) and synthetic holdings of capital instruments. For example, AIFIs should look through holdings of index securities to determine their underlying holdings of capital.

(b) Holdings in both the banking book and trading book are to be included. Capital includes common stock (paid-up equity capital) and all other types of cash and synthetic capital instruments (e.g. subordinated debt).

(c) Underwriting positions held for five working days or less can be excluded. Underwriting positions held for longer than five working days must be included.

(d) If the capital instrument of the entity in which the AIFI has invested does not meet the criteria for Common Equity Tier 1, Additional Tier 1, or Tier 2 capital of the AIFI, the capital is to be considered common shares for the purposes of this regulatory adjustment\(^*\).

(e) With the prior approval of RBI an AIFI can temporarily exclude certain investments where these have been made in the context of resolving or providing financial assistance to reorganise a distressed institution.

(ii) If the total of all holdings listed in paragraph (i) above, in aggregate exceed 10% of the AIFI’s Common Equity (after applying all other regulatory adjustments in full listed prior to this one), then the amount above 10% is required to be deducted, applying a corresponding deduction approach. This means the deduction should be applied to the same component of capital for which the capital would qualify if it was issued by the AIFI itself. Accordingly, the amount to be deducted from common equity should be calculated as the total of all holdings which in aggregate exceed 10% of the AIFI’s common equity (as per above) multiplied by the common equity holdings as a percentage of the total capital holdings. This would result in a Common Equity deduction which corresponds to the proportion of total capital holdings held in Common Equity. Similarly, the amount to be deducted from Additional Tier 1 capital should be calculated as the total of all holdings which in aggregate exceed 10% of the AIFI's Common Equity (as per above) multiplied by the Additional Tier 1 capital holdings as a percentage of the total capital holdings. The amount to be deducted from Tier 2 capital should be calculated as the total of all holdings which in aggregate exceed 10% of the AIFI's Common Equity (as per above) multiplied by the Tier 2 capital holdings as a percentage of the total capital holdings. (Please refer to illustration given in Annex 10).

\(^*\) Indirect holdings are exposures or part of exposures that, if a direct holding loses its value, will result in a loss to the AIFI substantially equivalent to the loss in the value of direct holding.

\(^*\) If the investment is issued out of a regulated financial entity and not included in regulatory capital in the relevant sector of the financial entity, it is not required to be deducted.
(iii) If, under the corresponding deduction approach, an AIFI is required to make a deduction from a particular tier of capital and it does not have enough of that tier of capital to satisfy that deduction, the shortfall will be deducted from the next higher tier of capital (e.g. if an AIFI does not have enough Additional Tier 1 capital to satisfy the deduction, the shortfall will be deducted from Common Equity Tier 1 capital).

(iv) Investments below the threshold of 10% of AIFI’s Common Equity, which are not deducted, will be risk weighted. Thus, instruments in the trading book will be treated as per the market risk rules and instruments in the banking book should be treated as per the standardised approach or internal ratings-based approach (as applicable). For the application of risk weighting the amount of the holdings which are required to be risk weighted would be allocated on a pro rata basis between the Banking and Trading Book. However, in certain cases, such investments in both scheduled and non-scheduled commercial banks will be fully deducted from Common Equity Tier 1 capital of investing AIFI as indicated in paragraphs 5.6, 8.3.5 and 8.4.4.

(v) For the purpose of risk weighting of investments in as indicated in para (iv) above, investments in securities having comparatively higher risk weights will be considered for risk weighting to the extent required to be risk weighted, both in banking and trading books. In other words, investments with comparatively poor ratings (i.e. higher risk weights) should be considered for the purpose of application of risk weighting first and the residual investments should be considered for deduction.

(C) **Significant Investments in the Capital of Banking, Financial and Insurance Entities which are outside the Scope of Regulatory Consolidation**

(i) The regulatory adjustment described in this section applies to investments in the capital of banking, financial and insurance entities that are outside the scope of regulatory consolidation where the AIFI owns more than 10% of the issued common share capital of the issuing entity or where the entity is an affiliate of the AIFI. In addition:

- Investments include direct, indirect and synthetic holdings of capital instruments. For example, AIFI should look through holdings of index securities to determine their underlying holdings of capital.

- Holdings in both the banking book and trading book are to be included. Capital includes common stock and all other types of cash and synthetic capital instruments (e.g. subordinated debt).

- Underwriting positions held for five working days or less can be excluded. Underwriting positions held for longer than five working days must be included.

---

17 Investments in entities that are outside of the scope of regulatory consolidation refers to investments in entities that have not been consolidated at all or have not been consolidated in such a way as to result in their assets being included in the calculation of consolidated risk-weighted assets of the group.

18 An affiliate of an AIFI is defined as a company that controls, or is controlled by, or is under common control with, the AIFI. Control of a company is defined as (1) ownership, control, or holding with power to vote 20% or more of a class of voting securities of the company; or (2) consolidation of the company for financial reporting purposes.

19 Indirect holdings are exposures or part of exposures that, if a direct holding loses its value, will result in a loss to the AIFI substantially equivalent to the loss in the value of direct holding.
If the capital instrument of the entity in which the AIFI has invested does not meet the criteria for Common Equity Tier 1, Additional Tier 1, or Tier 2 capital of the bank, the capital is to be considered common shares for the purposes of this regulatory adjustment.

With the prior approval of RBI, an AIFI can temporarily exclude certain investments where these have been made in the context of resolving or providing financial assistance to reorganise a distressed institution.

(ii) Investments other than Common Shares

All investments included in para (i) above which are not common shares must be fully deducted following a ‘corresponding deduction’ approach. This means the deduction should be applied to the same tier of capital for which the capital would qualify if it was issued by the AIFI itself. If the AIFI is required to make a deduction from a particular tier of capital and it does not have enough of that tier of capital to satisfy that deduction, the shortfall will be deducted from the next higher tier of capital (e.g. if an AIFI does not have enough Additional Tier 1 capital to satisfy the deduction, the shortfall will be deducted from Common Equity Tier 1 capital).

(iii) Investments which are Common Shares

All investments included in para (i) above which are common shares and which exceed 10% of the AIFI’s Common Equity (after the application of all regulatory adjustments) will be deducted while calculating Common Equity Tier 1 capital. The amount that is not deducted (upto 10% if AIFI’s common equity invested in the equity capital of such entities) in the calculation of Common Equity Tier 1 will be risk weighted at 250% (refer to illustration in Annex 10). However, in certain cases, such investments in both scheduled and non-scheduled commercial banks will be fully deducted from Common Equity Tier 1 capital of investing bank as indicated in paragraphs 5.6, 8.3.5 and 8.4.4.

4.4.8.3 With regard to computation of indirect holdings through mutual funds or index funds, of capital of banking, financial and insurance entities which are outside the scope of regulatory consolidation as mentioned in paragraphs 4.4.8.2(B) and 4.4.8.2(C) above, the following rules may be observed:

(i) If the amount of investments made by the mutual funds / index funds / venture capital funds / private equity funds / investment companies in the capital instruments of the financial entities is known; the indirect investment of the AIFI in such entities would be equal to AIFI’s investments in these entities multiplied by the percent of investments of such entities in the financial entities’ capital instruments.

(ii) If the amount of investments made by the mutual funds / index funds / venture capital funds / private equity funds / investment companies in the capital instruments of the financial entities is not known but, as per the investment policies / mandate of these entities such investments are permissible; the indirect investment would be equal to AIFI’s investments in these entities multiplied by maximum permissible limit which these entities are authorized to invest in the financial entities’ capital instruments.

(iii) If neither the amount of investments made by the mutual funds / index funds / venture capital funds / private equity funds in the capital instruments of financial

---

20 If the investment is issued out of a regulated financial entity and not included in regulatory capital in the relevant sector of the financial entity, it is not required to be deducted.
entities nor the maximum amount which these entities can invest in financial entities are known but, as per the investment policies / mandate of these entities such investments are permissible; the entire investment of the AIFI in these entities would be treated as indirect investment in financial entities. AIFIs must note that this method does not follow corresponding deduction approach i.e. all deductions will be made from the Common Equity Tier 1 capital even though, the investments of such entities are in the Additional Tier 1 / Tier 2 capital of the investing AIFI.

4.4.8.4 Application of these rules at consolidated level would mean:

(i) Identifying the relevant entities below and above threshold of 10% of common share capital of investee entities, based on aggregate investments of the consolidated group (parent plus consolidated subsidiaries) in common share capital of individual investee entities.

(ii) Applying the rules as stipulated in paragraphs 4.4.8.2(A), 4.4.8.2(B) and 4.4.8.2(C) and segregating investments into those which will be deducted from the consolidated capital and those which will be risk weighted. For this purpose,

- investments of the entire consolidated entity in capital instruments of investee entities will be aggregated into different classes of instruments.
- the consolidated Common Equity of the group will be taken into account.

4.4.8.5 When returns of the investors of the capital issues are counter guaranteed by the AIFI, such investments will not be considered as regulatory capital for the purpose of capital adequacy.

4.4.9 As indicated in paragraphs 3.3.2 and 3.4.1, equity investments in non-financial subsidiaries should be fully deducted from the consolidated and solo CET1 capital of the AIFI respectively, after making all the regulatory adjustments as indicated in above paragraphs.

4.4.10 Intra Group Transactions and Exposures

Attention is invited to circular DBOD.No.BP.BC.96/21.06.102/ 2013-14 dated February 11, 2014 on “Guidelines on Management of Intra-Group Transactions and Exposures" in terms of which intra-group exposures beyond permissible limits subsequent to March 31, 2016, if any, would be deducted from Common Equity Tier 1 capital of the bank. The same instructions shall apply to the AIFIs.

4.5 Transitional arrangements for AIFIs

Capital instruments already issued by the AIFIs which no longer qualify under Basel III will be allowed to be counted as Tier 1 or Tier 2, as the case may be, as per the existing rules until their maturity or the first call date. All capital instruments issued by AIFIs after these directions come into effect shall comply with the requirements set out hereunder.
5.  Capital Charge for Credit Risk

5.1 General

Under the Standardised Approach, the rating assigned by the eligible external credit rating agencies will largely support the measure of credit risk. The Reserve Bank has identified the external credit rating agencies that meet the eligibility criteria specified under the revised Framework. AIFIs may rely upon the ratings assigned by the external credit rating agencies chosen by the Reserve Bank for assigning risk weights for capital adequacy purposes as per the mapping furnished in these guidelines.

5.2 Claims on Domestic Sovereigns

5.2.1 Both fund based and non-fund based claims on the central government will attract a zero risk weight. Central Government guaranteed claims will attract a zero risk weight.

5.2.2 The Direct loan / credit / overdraft exposure, if any, of AIFIs to the State Governments and the investment in State Government securities will attract zero risk weight. State Government guaranteed claims will attract 20 per cent risk weight.

5.2.3 The risk weight applicable to claims on central government exposures will also apply to the claims on the Reserve Bank of India, DICGC, Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE) and Credit Risk Guarantee Fund Trust for Low Income Housing (CRGFTLIH). The claims on ECGC will attract a risk weight of 20 per cent.

5.2.4 The above risk weights for both direct claims and guarantee claims will be applicable as long as they are classified as ‘standard’ / performing assets. Where these sovereign exposures are classified as non-performing, they would attract risk weights as applicable to NPAs, which are detailed in paragraph 5.12.

5.2.5 The amount outstanding in the account styled as 'Amount receivable from Government of India under Agricultural Debt Waiver Scheme, 2008' shall be treated as a claim on the Government of India and would attract zero risk weight for the purpose of capital adequacy norms. However, the amount outstanding in the accounts covered by the Debt Relief Scheme shall be treated as a claim on the borrower and risk weighted as per the extant norms.

5.2.6 The above risk weights will be applied if such exposures are denominated in Indian Rupees and also funded in Indian Rupees.

5.3 Claims on Foreign Sovereigns and Foreign Central Banks

5.3.1 Subject to paragraph 5.3.2 below, claims on foreign sovereigns and their central banks will attract risk weights as per the rating assigned to those sovereigns and central banks/ sovereign and central bank claims, by international rating agencies as follows:

---

21 Please refer to the circular DBOD.No.BP.BC-90/21.04.048/2012-13 dated April 16, 2013 on Advances Guaranteed by ‘Credit Risk Guarantee Fund Trust for Low Income Housing (CRGFTLIH) - Risk Weights and Provisioning’.

22 For example: The risk weight assigned to an investment in US Treasury Bills by SBI branch in Paris, irrespective of the currency of funding, will be determined by the rating assigned to the Treasury Bills, as indicated in Table 2.

<td>150</td>
<td>100</td>
</tr>
</tbody>
</table>

* Standard & Poor’s

5.3.2 Claims on the foreign sovereign or foreign central bank in their jurisdiction, denominated in domestic currency of that jurisdiction, met out of the resources of the same currency will attract a risk weight of zero percent. However, in case a Host Supervisor requires a more conservative treatment to such claims in the books of the foreign branches of the AIFIs, they should adopt the requirements prescribed by the Host Country supervisors for computing capital adequacy.

5.4 Claims on Public Sector Entities (PSEs)

5.4.1 Claims on domestic public sector entities will be risk weighted in a manner similar to claims on Corporates.

5.4.2 Claims on foreign PSEs will be risk weighted as per the rating assigned by the international rating agencies as under:

Table 3: Claims on Foreign PSEs – Risk Weights

<table>
<thead>

5.5 Claims on MDBs, BIS and IMF

Claims on the Bank for International Settlements (BIS), the International Monetary Fund (IMF) and the following eligible Multilateral Development Banks (MDBs) evaluated by the BCBS will be treated similar to claims on scheduled banks meeting the minimum capital adequacy requirements and assigned a uniform twenty per cent risk weight:

(a) World Bank Group: IBRD and IFC,
(b) Asian Development Bank,
(c) African Development Bank,
(d) European Bank for Reconstruction and Development,
(e) Inter-American Development Bank,
(f) European Investment Bank,
(g) European Investment Fund,
(h) Nordic Investment Bank,
(i) Caribbean Development Bank,
(j) Islamic Development Bank and
(k) Council of Europe Development Bank.

---

23 For example: The risk weight assigned to an investment in US Treasury Bills by SDBI branch in New York will attract a zero per cent risk weight, irrespective of the rating of the claim, if the investment is funded from out of the USD denominated resources of SBI, New York. In case the SBI, New York, did not have any USD denominated resources, the risk weight will be determined by the rating assigned to the Treasury Bills as indicated in Table 2 above.
Similarly, claims on the International Finance Facility for Immunization (IFFIm) will also attract a twenty per cent risk weight.

5.6 Claims on Banks (Exposure to capital instruments)

5.6.1 In case of an AIFI’s investment in capital instruments of banks, the following such investments would not be deducted, but would attract appropriate risk weights (refer to the paragraph 4.4.8 above:

(i) Investments in capital instruments of banks where the investing AIFI holds not more than 10% of the issued common shares of the investee banks, subject to the following conditions:

- Aggregate of these investments, together with investments in the capital instruments in insurance and other financial entities, do not exceed 10% of Common Equity of the investing AIFI; and
- The equity investment in the investee entities is outside the scope of regulatory consolidation.

(ii) Equity investments in banks where the investing AIFI holds more than 10% of the issued common shares of the investee banks, subject to the following conditions:

- Aggregate of these investments, together with such investments in insurance and other financial entities, do not exceed 10% of Common Equity of the investing AIFI.
- The equity investment in the investee entities is outside the scope of regulatory consolidation.

Accordingly, the claims on banks incorporated in India and the branches of foreign banks in India, other than those deducted in terms of paragraph 4.4.8 above, will be risk weighted as under:

Table 4: Claims on Banks Incorporated in India and Foreign Bank Branches in India

<table>
<thead>
<tr>
<th>Level of Common Equity Tier 1 capital (CET1) including applicable capital conservation buffer (CCB) (%) of the investee bank (where applicable)</th>

</tbody>
</table>

* The deduction should be made from Common Equity Tier 1 Capital.

**Notes:**

(i) In the case of banks where no capital adequacy norms have been prescribed by the RBI, the lending / investing AIFI may calculate the CRAR of such a bank, notionally, by obtaining necessary information from the investee bank, using the capital adequacy norms as applicable to the commercial banks. In case, it is not found feasible to compute CRAR on such notional basis, the risk weight of 350 or 625 per cent, as per the risk perception of the investing AIFI, should be applied uniformly to the investing AIFI’s entire exposure.

(ii) In case of banks where capital adequacy norms are not applicable at present, the matter of investments in their capital-eligible instruments would not arise for now. However, this Table above will become applicable to them, if in future they issue any capital instruments where other banks/AIFIs are eligible to invest.

5.6.2 The claims on foreign banks will be risk weighted as under as per the ratings assigned by international rating agencies.

**Table 5: Claims on Foreign Banks – Risk Weights**

---

25 For example, as on March 31, 2016, minimum Common Equity Tier 1 of 5.5% and CCB between equal to 75% of 1.25% and less than 1.25%.
The exposures of the Indian branches of foreign banks, guaranteed / counter-guaranteed by the overseas Head Offices or the bank’s branch in another country would amount to a claim on the parent foreign bank and would also attract the risk weights as per Table 5 above.

5.6.3 However, the claims on a bank which are denominated in ‘domestic’ foreign currency met out of the resources in the same currency raised in that jurisdiction will be risk weighted at 20 per cent provided the bank complies with the minimum CRAR prescribed by the concerned bank regulator(s).

5.6.4 However, in case a Host Supervisor requires a more conservative treatment for such claims in the books of the foreign branches of the AIFIs, they should adopt the requirements prescribed by the Host supervisor for computing capital adequacy.

5.7 Claims on Primary Dealers
Claims on Primary Dealers shall be risk weighted in a manner similar to claims on corporates.

5.8 Claims on Corporates
5.8.1 Claims on corporates, shall be risk weighted as per the ratings assigned by the rating agencies registered with the SEBI and accredited by the Reserve Bank of India. The following table indicates the risk weight applicable to claims on corporates:

Unrated Unrated Unrated Unrated Unrated Unrated

For example: A Euro denominated claim of SBI branch in Paris on BNP Paribas, Paris which is funded from out of the Euro denominated deposits of SBI, Paris will attract a 20 per cent risk weight irrespective of the rating of the claim, provided BNP Paribas complies with the minimum CRAR stipulated by its regulator/supervisor in France. If BNP Paribas were breaching the minimum CRAR, the risk weight will be as indicated in Table 4 above.

26 For example: A Euro denominated claim of SBI branch in Paris on BNP Paribas, Paris which is funded from out of the Euro denominated deposits of SBI, Paris will attract a 20 per cent risk weight irrespective of the rating of the claim, provided BNP Paribas complies with the minimum CRAR stipulated by its regulator/supervisor in France. If BNP Paribas were breaching the minimum CRAR, the risk weight will be as indicated in Table 4 above.

27 Claims on corporates will include all fund based and non-fund based exposures other than those which qualify for inclusion under ‘sovereign’, ‘bank’, ‘regulatory retail’, ‘residential mortgage’, ‘non performing assets’, specified category addressed separately in these guidelines.

28 Please refer to circular DBOD.BP.BC.No.59/21.06.007/2013-14 dated October 17, 2013 addressed to banks.
(i) No claim on an unrated corporate may be given a risk weight preferential to that assigned to its sovereign of incorporation.

(ii) All unrated claims on corporates having aggregate exposure from banking system of more than ₹ 200 crore will attract a risk weight of 150%.

(iii) Claims on corporates having aggregate exposure from banking system of more than ₹ 100 crore which were rated earlier and subsequently have become unrated will attract a risk weight of 150%.

5.8.2 The Reserve Bank may increase the standard risk weight for unrated claims where a higher risk weight is warranted by the overall default experience. As part of the supervisory review process, the Reserve Bank would also consider whether the credit quality of unrated corporate claims held by individual AIFIs should warrant a standard risk weight higher than 100 per cent.

5.8.3 With a view to reflecting a higher element of inherent risk which may be latent in entities whose obligations have been subjected to re-structuring / re-scheduling either by AIFIs on their own or along with bankers / creditors, the claims on these entities should be assigned a higher risk weight until satisfactory performance under the revised payment schedule has been established as prescribed in the guidelines DBR.No.BP.BC.45/21.04.048/2018-19 dated June 7, 2019 on “Prudential Framework for Resolution of Stressed Assets” applicable to the AIFIs as amended from time to time. The applicable risk weights will be 125 per cent.

5.8.4 The claims on non-resident corporates will be risk weighted as under as per the ratings assigned by international rating agencies.

5.9 Claims included in the Regulatory Retail Portfolios

5.9.1 Claims (including both fund-based and non-fund based) that meet all the four criteria listed below in paragraph 5.9.3 may be considered as retail claims for regulatory capital purposes and included in a regulatory retail portfolio. Claims included in this portfolio shall be assigned a risk-weight of 75 per cent, except as provided in paragraph 5.12 below for non-performing assets.

5.9.2 The following claims, both fund based and non-fund based, shall be excluded from the regulatory retail portfolio:

(a) Exposures by way of investments in securities (such as bonds and equities), whether listed or not;

(b) Mortgage Loans to the extent that they qualify for treatment as claims secured by residential property\(^{29}\) or claims secured by commercial real estate\(^{30}\);

\(^{29}\) Mortgage loans qualifying for treatment as ‘claims secured by residential property’ are defined in paragraph 5.10.

\(^{30}\) As defined in paragraph 5.11.1.
5.9.3 Qualifying Criteria

(i) **Orientation Criterion** - The exposure (both fund-based and non fund-based) is to an individual person or persons or to a small business; Person under this clause would mean any legal person capable of entering into contracts and would include but not be restricted to individual and HUF; small business would include partnership firm, trust, private limited companies, public limited companies, co-operative societies etc. Small business is one where the total average annual turnover is less than ₹. 50 crore. The turnover criterion will be linked to the average of the last three years in the case of existing entities; projected turnover in the case of new entities; and both actual and projected turnover for entities which are yet to complete three years.

(ii) **Product Criterion** - The exposure (both fund-based and non-fund-based) takes the form of any of the following: revolving credits and lines of credit (including overdrafts), term loans and leases (e.g. installment loans and leases, student and educational loans) and small business facilities and commitments.

(iii) **Granularity Criterion** - AIFIs must ensure that the regulatory retail portfolio is sufficiently diversified to a degree that reduces the risks in the portfolio, warranting the 75 per cent risk weight. One way of achieving this is that no aggregate exposure to one counterpart should exceed 0.2 per cent of the overall regulatory retail portfolio. ‘Aggregate exposure’ means gross amount (i.e. not taking any benefit for credit risk mitigation into account) of all forms of debt exposures (e.g. loans or commitments) that individually satisfy the three other criteria. In addition, ‘one counterpart’ means one or several entities that may be considered as a single beneficiary (e.g. in the case of a small business that is affiliated to another small business, the limit would apply to the AIFI’s aggregated exposure on both businesses). While AIFIs may appropriately use the group exposure concept for computing aggregate exposures, they should evolve adequate systems to ensure strict adherence with this criterion. NPAs under retail loans are to be excluded from the overall regulatory retail portfolio when assessing the granularity criterion for risk-weighting purposes.

(iv) **Low value of individual exposures** - The maximum aggregated retail exposure to one counterpart should not exceed the absolute threshold limit of ₹. 7.5 crore.

5.9.4 For the purpose of ascertaining compliance with the absolute threshold, exposure would mean sanctioned limit or the actual outstanding, whichever is higher, for all fund based and non-fund based facilities, including all forms of off-balance sheet exposures. In the case of term loans and EMI based facilities, where there is no scope for redrawing any portion of the sanctioned amounts, exposure shall mean the actual outstanding.

5.9.5 The RBI would evaluate at periodic intervals the risk weight assigned to the retail portfolio with reference to the default experience for these exposures. As part of the supervisory review process, the RBI would also consider whether the credit quality of regulatory retail claims held by an AIFI should warrant a standard risk weight higher than 75 per cent.

5.10 Claims secured by Residential Property

5.10.1 Lending to individuals meant for acquiring residential property which are fully secured by mortgages on the residential property that is or will be occupied by the borrower, or that is rented, shall be risk weighted as indicated as per Table 7A below, based on Board
approved valuation policy. LTV ratio should be computed as a percentage with total outstanding in the account (viz. “principal + accrued interest + other charges pertaining to the loan” without any netting) in the numerator and the realisable value of the residential property mortgaged to the AIFI in the denominator.

*For all new housing loans sanctioned on or after the date of this Master Direction and up to March 31, 2022, the risk weights shall be applied as prescribed in circular DOR.No.BP.BC.24/08.12.015/2020-21 dated October 16, 2020

Notes:

1 - The LTV ratio should not exceed the prescribed ceiling in all fresh cases of sanction. In case the LTV ratio is currently above the ceiling prescribed for any reasons, efforts shall be made to bring it within limits.

2 - AIFIs’ exposures to third dwelling unit onwards to an individual will also be treated as CRE exposures, as indicated in paragraph 2 in Appendix 2 of Circular DBOD.BP.BC.No.42/08.12.015/2009-10 dated September 9, 2009 on ‘Guidelines on Classification of Exposures as Commercial Real Estate (CRE) Exposures’.

5.10.2 All other claims secured by residential property would attract the higher of the risk weight applicable to the counterparty or to the purpose for which the AIFI has extended finance.

5.10.3 Restructured housing loans should be risk weighted with an additional risk weight of 25 per cent to the risk weights prescribed above.

5.10.4 Loans / exposures to intermediaries for on-lending will not be eligible for inclusion under claims secured by residential property but will be treated as claims on corporates or claims included in the regulatory retail portfolio as the case may be.

5.10.5 Investments in mortgage backed securities (MBS) backed by exposures as at paragraph 5.10.1 above will be governed by the guidelines pertaining to securitisation exposures (refer to paragraph 5.16 below).

---

5.11 Claims Classified as Commercial Real Estate Exposure

5.11.1 Commercial Real Estate exposure is defined as per the guidelines issued vide circular DBOD.No.BP.BC.42/08.12.015/2009-10 dated September 9, 2009.

5.11.2 Claims mentioned above will attract a risk weight of 100 per cent.

5.11.3 Investments in mortgage backed securities (MBS) backed by exposures as at paragraph 5.11.1 above will be governed by the guidelines pertaining to securitisation exposures in terms of paragraph 5.16 below.

5.12 Non-Performing Assets (NPAs)

5.12.1 The unsecured portion of NPA (other than a qualifying residential mortgage loan which is addressed in paragraph 5.12.6), net of specific provisions (including partial write-offs), will be risk-weighted as follows:

(i) 150 per cent risk weight when specific provisions are less than 20 per cent of the outstanding amount of the NPA;
(ii) 100 per cent risk weight when specific provisions are at least 20 per cent of the outstanding amount of the NPA;
(iii) 50 per cent risk weight when specific provisions are at least 50 per cent of the outstanding amount of the NPA.

5.12.2 For the purpose of computing the level of specific provisions in NPAs for deciding the risk-weighting, all funded NPA exposures of a single counterparty (without netting the value of the eligible collateral) should be reckoned in the denominator.

5.12.3 For the purpose of defining the secured portion of the NPA, eligible collateral will be the same as recognised for credit risk mitigation purposes (paragraph 7.3.5). Hence, other forms of collateral like land, buildings, plant, machinery, current assets, etc. will not be reckoned while computing the secured portion of NPAs for capital adequacy purposes.

5.12.4 In addition to the above, where a NPA is fully secured by the following forms of collateral that are not recognised for credit risk mitigation purposes, either independently or along with other eligible collateral a 100 per cent risk weight may apply, net of specific provisions, when provisions reach 15 per cent of the outstanding amount:

(i) Land and building which are valued by an expert valuer and where the valuation is not more than three years old, and
(ii) Plant and machinery in good working condition at a value not higher than the depreciated value as reflected in the audited balance sheet of the borrower, which is not older than eighteen months.

5.12.5 The above collaterals (mentioned in paragraph 5.12.4) will be recognized only where the AIFI is having clear title to realize the sale proceeds thereof and can appropriate the same towards the amounts due to the AIFI. The AIFI’s title to the collateral should be well documented. These forms of collaterals are not recognised anywhere else under the standardised approach.

5.12.6 Claims secured by residential property, as defined in paragraph 5.10.1, which are NPA will be risk weighted at 100 per cent net of specific provisions. If the specific provisions in such loans are at least 20 per cent but less than 50 per cent of the outstanding amount, the risk weight applicable to the loan net of specific provisions will be 75 per cent. If the specific provisions are 50 per cent or more the applicable risk weight will be 50 per cent.

5.13 Specified Categories

5.13.1 Fund based and non-fund based claims on Venture Capital Funds, which are
considered as high risk exposures, will attract a higher risk weight of 150 per cent\textsuperscript{32}.

5.13.2 Reserve Bank may, in due course, decide to apply a 150 per cent or higher risk weight reflecting the higher risks associated with any other claim that may be identified as a high risk exposure.

5.13.3 Consumer credit, including personal loans will attract a risk weight of 100 per cent. As gold and gold jewellery are eligible financial collateral, the counterparty exposure in respect of personal loans secured by gold and gold jewellery will be worked out under the comprehensive approach as per paragraph 7.3.4. The ‘exposure value after risk mitigation’ shall attract the risk weight of 100 per cent.

5.13.4 Advances classified as ‘Capital market exposures’ will attract a 125 per cent risk weight or risk weight warranted by external rating (or lack of it) of the counterparty, whichever is higher. These risk weights will also be applicable to all banking book exposures, which are exempted from capital market exposure ceilings for direct investments / total capital market exposures\textsuperscript{33}.

5.13.5 The exposure to capital instruments issued by NBFCs which are not deducted and are required to be risk weighted in terms of paragraph 4.4.8.2(B) would be risk weighted at 125% or as per the external ratings, whichever is higher. The exposure to equity instruments issued by NBFCs which are not deducted and are required to be risk weighted in terms of paragraph 4.4.8.2(C) would be risk weighted at 250%. Exposures to all NBFCs (including HFCs), excluding Core Investment Companies (CICs), will be risk weighted as per the ratings assigned by the rating agencies registered with SEBI and accredited by the Reserve Bank of India, in a manner similar to that of corporates as prescribed under para 5.8.1. Exposures to CICs, rated as well as unrated, will be risk-weighted at 100%.

5.13.6 All investments made by the AIFIs in the paid-up equity of non-financial entities (other than subsidiaries) made under their statutory mandate which exceed 49% of the issued common share capital of the issuing entity or where the entity is an unconsolidated affiliate as defined in paragraph 4.4.8.2(C)(i) shall receive a risk weight of 1250%. Equity investments equal to or below 49% paid-up equity of such investee companies shall be assigned a 125% risk weight or the risk weight as warranted by rating or lack of it, whichever higher. An AIFI can hold up to 49% of equity of a company as a pledgee. However, if the AIFI ends up acquiring this in satisfaction of its claims, it shall be brought down below 10% limit within 3 years. In the event of failure to comply with this requirement, the entire exposure shall receive a risk weight of 1250%.

5.13.7 The exposure to capital instruments issued by financial entities (other than banks and NBFCs) which are not deducted and are required to be risk weighted in terms of paragraph 4.4.8.2(B) would be risk weighted at 125% or as per the external ratings whichever is higher. The exposure to equity instruments issued by financial entities (other than banks and NBFCs) which are not deducted and are required to be risk weighted in terms of paragraph 4.4.8.2(C) would be risk weighted at 250%.

\textsuperscript{32} SIDBI’s investment limit in MSME-dedicated VCFs without the prior approval of the Bank shall be 20% subject to the proviso that SIDBI will maintain a capital charge of 175%. For specific risk where SIDBI’s CME is between 20% and 30%, the capital charge will be at 200% and for CME above 30% and upto 40% the capital charge on specific risk will be 225%.

\textsuperscript{33} The applicable risk weight for banking book exposure / capital charge for market risk exposure for an AIFI’s equity investments in banks/financial institutions etc. are covered under paragraphs 5 and 8 respectively. These risk weights / capital charge will also apply to exposures which are exempt from ‘capital market exposure’ limit.
5.13.8 AIFI’s investments in the non-equity capital eligible instruments of banks should be risk weighted as prescribed in paragraph 5.6.1.

5.13.9 Unhedged Foreign Currency Exposure

If the extent of unhedged foreign currency exposures of entities is significant, this can increase the probability of default in times of high currency volatility. Therefore, the incremental capital requirements for AIFIs’ exposures to entities with unhedged foreign currency exposures (i.e. over and above the present capital requirements) as per the instructions contained in circulars DBOD.No.BP.BC.85/21.06.200/2013-14 and DBOD.No.BP.BC.116/21.06.200/2013-14 dated January 15, 2014 and June 3, 2014 addressed to banks, respectively, are as under:

<table>
<thead>
<tr>
<th>Likely Loss/EBID (%)</th>
<th>Incremental Capital Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 75 per cent</td>
<td>0</td>
</tr>
<tr>
<td>More than 75 per cent</td>
<td>25 per cent increase in the risk weight</td>
</tr>
</tbody>
</table>

5.14 Other Assets

5.14.1 Loans and advances to AIFI’s own staff which are fully covered by superannuation benefits and/or mortgage of flat/ house will attract a 20 per cent risk weight. Since flat/ house is not an eligible collateral and since AIFIs normally recover the dues by adjusting the superannuation benefits only at the time of cessation from service, the concessional risk weight shall be applied without any adjustment of the outstanding amount. In case an AIFI is holding eligible collateral in respect of amounts due from a staff member, the outstanding amount in respect of that staff member may be adjusted to the extent permissible, as indicated in paragraph 7 below.

5.14.2 Other loans and advances to AIFI’s own staff will be eligible for inclusion under regulatory retail portfolio and will therefore attract a 75 per cent risk weight.

5.14.3 All other assets will attract a uniform risk weight of 100 per cent.

5.15 Off-Balance Sheet Items

5.15.1 General

(i) The total risk weighted off-balance sheet credit exposure is calculated as the sum of the risk-weighted amount of the market related and non-market related off-balance sheet items. The risk-weighted amount of an off-balance sheet item that gives rise to credit exposure is generally calculated by means of a two-step process:

(a) the notional amount of the transaction is converted into a credit equivalent amount, by multiplying the amount by the specified credit conversion factor or by applying the current exposure method; and

(b) the resulting credit equivalent amount is multiplied by the risk weight applicable to the counterparty or to the purpose for which the AIFI has extended finance or the type of asset, whichever is higher.

(ii) Where the off-balance sheet item is secured by eligible collateral or guarantee, the

---

35 In this context, ‘entities’ means those entities which have borrowed from AIFIs including borrowing in INR and other currencies.
credit risk mitigation guidelines detailed in paragraph 7 may be applied.

5.15.2 Non-market-related Off Balance Sheet Items

(i) The credit equivalent amount in relation to a non-market related off-balance sheet item like, direct credit substitutes, trade and performance related contingent items and commitments with certain drawdown, other commitments, etc. will be determined by multiplying the contracted amount of that particular transaction by the relevant credit conversion factor (CCF).

(ii) Where the non-market related off-balance sheet item is an undrawn or partially undrawn fund-based facility, the amount of undrawn commitment to be included in calculating the off-balance sheet non-market related credit exposures is the maximum unused portion of the commitment that could be drawn during the remaining period to maturity. Any drawn portion of a commitment forms a part of AIFI’s on-balance sheet credit exposure.

(iii) In the case of irrevocable commitments to provide off-balance sheet facilities, the original maturity will be measured from the commencement of the commitment until the time the associated facility expires. For example an irrevocable commitment with an original maturity of 12 months, to issue a 6 month documentary letter of credit, is deemed to have an original maturity of 18 months. Irrevocable commitments to provide off-balance sheet facilities should be assigned the lower of the two applicable credit conversion factors. For example, an irrevocable commitment with an original maturity of 15 months (50 per cent - CCF) to issue a six month documentary letter of credit (20 per cent - CCF) would attract the lower of the CCF i.e., the CCF applicable to the documentary letter of credit viz. 20 per cent.

(iv) The credit conversion factors for non-market related off-balance sheet transactions are as under:

36 For example: (a) In the case of a cash credit facility for Rs.100 lakh (which is not unconditionally cancellable) where the drawn portion is Rs. 60 lakh, the undrawn portion of Rs. 40 lakh will attract a CCF of 20 per cent (since the CC facility is subject to review / renewal normally once a year). The credit equivalent amount of Rs 8 lakh (20% of Rs.40 lakh) will be assigned the appropriate risk weight as applicable to the counterparty / rating to arrive at the risk weighted asset for the undrawn portion. The drawn portion (Rs. 60 lakh) will attract a risk weight as applicable to the counterparty / rating.

(b) A TL of Rs. 700 cr is sanctioned for a large project which can be drawn down in stages over a three year period. The terms of sanction allow draw down in three stages – Rs. 150 cr in Stage I, Rs. 200 cr in Stage II and Rs. 350 cr in Stage III, where the borrower needs the AIFI’s explicit approval for draw down under Stages II and III after completion of certain formalities. If the borrower has drawn already Rs. 50 cr under Stage I, then the undrawn portion would be computed with reference to Stage I alone i.e., it will be Rs.100 cr. If Stage I is scheduled to be completed within one year, the CCF will be 20% and if it is more than one year then the applicable CCF will be 50 per cent.

</tbody>
</table>

(v) In regard to non-market related off-balance sheet items, the following transactions with non-bank counterparties will be treated as claims on banks:

- Guarantees issued by banks against the counter guarantees of other banks.

\(^{37}\) However, this will be subject to AIFIs demonstrating that they are actually able to cancel any undrawn commitments in case of deterioration in a borrower’s credit worthiness failing which the credit conversion factor applicable to such facilities which are not cancellable will apply. AIFIs’ compliance to these guidelines will be assessed under Annual Financial Inspection / Supervisory Review and Evaluation Process under Pillar 2 of RBI.
Rediscounting of documentary bills discounted by banks and bills discounted by banks which have been accepted by another bank will be treated as a funded claim on a bank.

In all the above cases AIFIs should be fully satisfied that the risk exposure is in fact on the bank. If they are satisfied that the exposure is on the bank they may assign these exposures the risk weight applicable to banks as detailed in paragraph 5.6.

(vi) Issue of Irrevocable Payment Commitment by AIFIs to various Stock Exchanges on behalf of Mutual Funds and FIIs is a financial guarantee with a Credit Conversion Factor (CCF) of 100. However, capital will have to be maintained only on exposure which is reckoned as CME, i.e. 50% of the amount, because the rest of the exposure is deemed to have been covered by cash/securities which are admissible risk mitigants as per capital adequacy framework. Thus, capital is to be maintained on the amount taken for CME and the risk weight would be 125% thereon.

(vii) For classification of AIFI’s guarantees\(^{38}\) viz. direct credit substitutes and transaction-related contingent items etc. (Sr. No. 1 and 2 of Table 8 above), the following principles should be kept in view for the application of CCFs:

(a) Financial guarantees are direct credit substitutes wherein an AIFI irrevocably undertakes to guarantee the repayment of a contractual financial obligation. Financial guarantees essentially carry the same credit risk as a direct extension of credit i.e., the risk of loss is directly linked to the creditworthiness of the counterparty against whom a potential claim is acquired. An indicative list of financial guarantees, attracting a CCF of 100 per cent is as under:

- Guarantees for credit facilities;
- Guarantees in lieu of repayment of financial securities;
- Guarantees in lieu of margin requirements of exchanges;
- Guarantees for mobilisation advance, advance money before the commencement of a project and for money to be received in various stages of project implementation;
- Guarantees towards revenue dues, taxes, duties, levies etc. in favour of Tax/Customs / Port / Excise Authorities and for disputed liabilities for litigation pending at courts;
- Credit Enhancements;
- Liquidity facilities for securitisation transactions;
- Acceptances (including endorsements with the character of acceptance);
- Deferred payment guarantees.

(b) Performance guarantees are essentially transaction-related contingencies that involve an irrevocable undertaking to pay a third party in the event the counterparty fails to fulfil or perform a contractual non-financial obligation. In such transactions, the risk of loss depends on the event which need not necessarily be related to the creditworthiness of the counterparty involved. An indicative list of performance guarantees, attracting a CCF of 50 per cent is as under:

- Bid bonds;
- Performance bonds and export performance guarantees;
- Guarantees in lieu of security deposits / earnest money deposits (EMD) for participating in tenders;
- Retention money guarantees;

---

- 45 -

- Warranties, indemnities and standby letters of credit related to particular transaction.

5.15.3 Treatment of Total Counterparty Credit Risk

5.15.3.1 The total capital charge for counterparty credit risk will cover the default risk as well as credit migration risk of the counterparty reflected in mark-to-market losses on the expected counterparty risk (such losses being known as credit value adjustments, CVA). Counterparty risk may arise in the context of OTC derivatives and Securities Financing Transactions. Such instruments generally exhibit the following abstract characteristics:

- The transactions generate a current exposure or market value.
- The transactions have an associated random future market value based on market variables.
- The transactions generate an exchange of payments or an exchange of a financial instrument against payment.
- Collateral may be used to mitigate risk exposure and is inherent in the nature of some transactions.
- Short-term financing may be a primary objective in that the transactions mostly consist of an exchange of one asset for another (cash or securities) for a relatively short period of time, usually for the business purpose of financing. The two sides of the transactions are not the result of separate decisions but form an indivisible whole to accomplish a defined objective.
- Netting may be used to mitigate the risk.\(^39\)
- Positions are frequently valued (most commonly on a daily basis), according to market variables.
- Remargining may be employed.

The ‘capital charge for default risk’ will be calculated using Current Exposure Method as explained in paragraph 5.15.3.5. The ‘capital charge for CVA risk’ will be calculated as explained in paragraph 5.15.3.6. The Current Exposure method is applicable only to OTC derivatives. The counterparty risk on account of Securities Financing Transactions is covered in paragraph 7.3.8 of this Chapter.

5.15.3.2 Exemption from capital requirements for counterparty risk is permitted for foreign exchange (except gold) contracts which have an original maturity of 14 calendar days or less.

5.15.3.3 Definitions and general terminology

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. An economic loss would occur if the transactions or portfolio of transactions with the counterparty has a positive economic value at the time of default. Unlike a firm’s exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending AIFI faces the risk of loss, CCR creates a bilateral risk of loss: the market value of the transaction can be positive or negative to either counterparty to the transaction. The market value is uncertain and can vary over time with the movement of underlying market factors.

\(^{39}\) Please refer to DBOD.No.BP.BC.48/21.06.001/2010-11 October 1, 2010 on Prudential Norms for Off-Balance Sheet Exposures of Banks – Bilateral netting of counterparty credit exposures addressed to banks. As indicated therein, bilateral netting of mark-to-market (MTM) values arising on account of derivative contracts is not permitted.
Securities Financing Transactions (SFTs) are transactions such as repurchase agreements, reverse repurchase agreements, security lending and borrowing, collateralised borrowing and lending (CBLO) and margin lending transactions, where the value of the transactions depends on market valuations and the transactions are often subject to margin agreements.

Hedging Set is a group of risk positions from the transactions within a single netting set for which only their balance is relevant for determining the exposure amount or EAD under the CCR standardised method.

Current Exposure is the larger of zero, or the market value of a transaction or portfolio of transactions within a netting set with a counterparty that would be lost upon the default of the counterparty, assuming no recovery on the value of those transactions in bankruptcy. Current exposure is often also called Replacement Cost.

Credit Valuation Adjustment is an adjustment to the mid-market valuation of the portfolio of trades with a counterparty. This adjustment reflects the market value of the credit risk due to any failure to perform on contractual agreements with a counterparty. This adjustment may reflect the market value of the credit risk of the counterparty or the market value of the credit risk of both the AIFI and the counterparty.

One-Sided Credit Valuation Adjustment is a credit valuation adjustment that reflects the market value of the credit risk of the counterparty to the firm, but does not reflect the market value of the credit risk of the AIFI to the counterparty.

A central counterparty (CCP) is a clearing house that interposes itself between counterparties to contracts traded in one or more financial markets, becoming the buyer to every seller and the seller to every buyer and thereby ensuring the future performance of open contracts. A CCP becomes counterparty to trades with market participants through novation, an open offer system, or another legally binding arrangement. For the purposes of the capital framework, a CCP is a financial institution.

A qualifying central counterparty (QCCP) is an entity that is licensed to operate as a CCP (including a license granted by way of confirming an exemption), and is permitted by the appropriate regulator / overseer to operate as such with respect to the products offered. This is subject to the provision that the CCP is based and prudentially supervised in a jurisdiction where the relevant regulator/overseer has established, and publicly indicated that it applies to the CCP on an ongoing basis, domestic rules and regulations that are consistent with the CPSS-IOSCO Principles for Financial Market Infrastructures.

A clearing member is a member of, or a direct participant in, a CCP that is entitled to enter into a transaction with the CCP, regardless of whether it enters into trades with a CCP for its own hedging, investment or speculative purposes or whether it also enters into trades as a financial intermediary between the CCP and other market participants.

A client is a party to a transaction with a CCP through either a clearing member acting as a financial intermediary, or a clearing member guaranteeing the performance of the client to the CCP.

Initial margin means a clearing member’s or client’s funded collateral posted to the CCP to mitigate the potential future exposure of the CCP to the clearing member arising from the possible future change in the value of their transactions. For the purposes of these

---

40 Please refer to circular DBOD.No.BP.BC.28/21.06.201/2013-14 dated July 2, 2013 addressed to banks.

41 For the purpose of these guidelines, where a CCP has a link to a second CCP, that second CCP is to be treated as a clearing member of the first CCP. Whether the second CCP’s collateral contribution to the first CCP is treated as initial margin or a default fund contribution will depend upon the legal arrangement between the CCPs. In such cases, if any, RBI should be consulted for determining the treatment of this initial margin and default fund contributions.
guidelines, initial margin does not include contributions to a CCP for mutualised loss sharing arrangements (i.e. in case a CCP uses initial margin to mutualise losses among the clearing members, it will be treated as a default fund exposure).

**Variation margin** means a clearing member’s or client’s funded collateral posted on a daily or intraday basis to a CCP based upon price movements of their transactions.

**Trade exposures** include the current\(^42\) and potential future exposure of a clearing member or a client to a CCP arising from OTC derivatives, exchange traded derivatives transactions or SFTs, as well as initial margin.

**Default funds**, also known as clearing deposits or guarantee fund contributions (or any other names), are clearing members’ funded or unfunded contributions towards, or underwriting of, a CCP’s mutualised loss sharing arrangements. The description given by a CCP to its mutualised loss sharing arrangements is not determinative of their status as a default fund; rather, the substance of such arrangements will govern their status.

**Offsetting transaction** means the transaction leg between the clearing member and the CCP when the clearing member acts on behalf of a client (e.g. when a clearing member clears or novates a client’s trade).

5.15.3.4 When entering into bilateral OTC derivative transactions, AIFIs are required to hold capital to protect against the risk that the counterparty defaults and for credit valuation adjustment (CVA) risk. The CVA charge is introduced as part of the Basel III framework as explained in paragraphs 5.15.3.5 and 5.15.3.6 below.

5.15.3.5 Default Risk Capital Charge for CCR

The exposure amount for the purpose of computing for default risk capital charge for counterparty credit risk will be calculated using the **Current Exposure Method (CEM)** described as under:

(i) The credit equivalent amount of a market related off-balance sheet transaction calculated using the current exposure method is the sum of current credit exposure and potential future credit exposure of these contracts. For this purpose, credit equivalent amount will be adjusted for legally valid eligible financial collaterals in accordance with paragraph 7.3 – Credit Risk Mitigation Techniques – Collateralised Transactions and the provisions held by the AIFI for CVA losses.

(ii) The CVA loss will be calculated as a prudent valuation adjustment as per prudent valuation guidance contained in paragraph 8.8.1, without taking into account any offsetting debit valuation adjustments (DVA) which have been deducted from capital (please see paragraph 4.4.6). The CVA loss deducted from exposures to determine outstanding EAD is the CVA loss gross of all DVA which have been separately deducted from capital. To the extent DVA has not been separately deducted from a AIFI’s capital, the CVA loss used to determine outstanding EAD will be net of such DVA. Risk Weighted Assets for a given OTC derivative counterparty may be calculated as the applicable risk weight under the Standardised or IRB approach multiplied by the outstanding EAD of the counterparty. This reduction of EAD by CVA losses does not apply to the determination of the CVA risk capital charge as per formula given in paragraph 5.15.3.6 (ii).

(iii) While computing the credit exposure AIFIs may exclude ‘sold options’, provided the entire premium / fee or any other form of income is received / realised.

(iv) Current credit exposure is defined as the sum of the positive mark-to-market value of these contracts. The Current Exposure Method requires periodical calculation of the current

\(^{42}\) For the purpose of this definition, the current exposure of a clearing member includes the variation margin due to the clearing member but not yet received.
credit exposure by marking these contracts to market, thus capturing the current credit exposure.

(v) Potential future credit exposure is determined by multiplying the notional principal amount of each of these contracts irrespective of whether the contract has a zero, positive or negative mark-to-market value by the relevant add-on factor indicated below according to the nature and residual maturity of the instrument.

Table 9: Credit Conversion Factors for Market-Related Off-Balance Sheet Items

</tbody>
</table>

(vi) For contracts with multiple exchanges of principal, the add-on factors are to be multiplied by the number of remaining payments in the contract.

(vii) For contracts that are structured to settle outstanding exposure following specified payment dates and where the terms are reset such that the market value of the contract is zero on these specified dates, the residual maturity would be set equal to the time until the next reset date. However, in the case of interest rate contracts which have residual maturities of more than one year and meet the above criteria, the CCF or add-on factor is subject to a floor of 1.0%.

(viii) No potential future credit exposure would be calculated for single currency floating/floating interest rate swaps; the credit exposure on these contracts would be evaluated solely on the basis of their mark-to-market value.

(ix) Potential future exposures should be based on ‘effective’ rather than ‘apparent notional amounts’. In the event that the ‘stated notional amount’ is leveraged or enhanced by the structure of the transaction, AIFIs must use the ‘effective notional amount’ when determining potential future exposure. For example, a stated notional amount of USD 1 million with payments based on an internal rate of two times the Prime Lending Rate (PLR) would have an effective notional amount of USD 2 million.

5.15.3.6 Capitalisation of mark-to-market counterparty risk losses (CVA capital charge)

(i) In addition to the default risk capital requirement for counterparty credit risk, AIFIs are also required to compute an additional capital charge to cover the risk of mark-to-market losses on the expected counterparty risk (such losses being known as credit value adjustments, CVA) to OTC derivatives. The CVA capital charge will be calculated in the manner indicated below in para (ii). AIFIs are not required to include in this capital charge (a) transactions with a central counterparty (CCP); and (b) securities financing transactions (SFTs).

(ii) AIFIs should use the following formula to calculate a portfolio capital charge for CVA risk for their counterparties:

\[
K = 2.33 \times \sqrt{h} \left[ \sum_{i} 0.5 \times w_i \left( M_i \times EAD_i^{\text{total}} - M_i^{\text{total}} \times B_i^{\text{non}} \right) + \sum_{j} w_j \left( M_j \times EAD_j^{\text{default}} - M_j^{\text{default}} \times B_j^{\text{non}} \right) \right]^{0.5} + \sum_{i} 0.75 \times w_i \left( M_i \times EAD_i^{\text{default}} - M_i^{\text{default}} \times B_i^{\text{non}} \right)
\]

43 Please refer to paragraph 8.6.3 for credit default swaps.
Where:

- **h** is the one-year risk horizon (in units of a year), \( h = 1 \).

- **\( w_i \)** is the weight applicable to counterparty ‘i’. Counterparty ‘i’ should be mapped to one of the seven weights \( w_i \) based on its external rating, as shown in the Table below in the last bullet point.

- \( \text{EAD}_{\text{total}} \) is the gross exposure at default of counterparty ‘i’ without taking into account the effect of bilateral netting\(^44\) including the effect of collateral as per the existing Current Exposure Method (CEM) as applicable to the calculation of counterparty risk capital charges for such counterparty by the AIFI. The exposure should be discounted by applying the factor \((1 - \exp(-0.05 \times M_i))/ (0.05 \times M_i)\).

- **\( B_i \)** is the notional of purchased single name CDS hedges (summed if more than one position) referencing counterparty ‘i’, and used to hedge CVA risk. This notional amount should be discounted by applying the factor \((1 - \exp(-0.05 \times M_{\text{hedge}}))/ (0.05 \times M_{\text{hedge}})\).

- **\( B_{\text{ind}} \)** is the full notional of one or more index CDS of purchased protection, used to hedge CVA risk. This notional amount should be discounted by applying the factor \((1 - \exp(-0.05 \times M_{\text{ind}}))/ (0.05 \times M_{\text{ind}})\).

- **\( w_{\text{ind}} \)** is the weight applicable to index hedges. The AIFI must map indices to one of the seven weights \( w_i \) based on the average spread of index ‘ind’.

- **\( M_i \)** is the effective maturity of the transactions with counterparty ‘i’. \( M_i \) is the notional weighted average maturity of all the contracts with counterparty ‘i’.

- **\( M_{\text{hedge}} \)** is the maturity of the hedge instrument with notional \( B_i \) (the quantities \( M_{\text{hedge}} \). \( B_i \) are to be summed if these are several positions).

- **\( M_{\text{ind}} \)** is the maturity of the index hedge ‘ind’. In case of more than one index hedge position, it is the notional weighted average maturity.

- For any counterparty that is also a constituent of an index on which a CDS is used for hedging counterparty credit risk, the notional amount attributable to that single name (as per its reference entity weight) may be subtracted from the index CDS notional amount and treated as a single name hedge (\( B_i \)) of the individual counterparty with maturity based on the maturity of the index.

- The weights are given in the Table below, which are based on the external rating of the counterparty:

---

\(^44\) Please refer to the circular DBOD.No.BP.BC.48/21.06.001/2010-11 dated October 1, 2010 on bilateral netting of counterparty credit, which states that owing to legal issues bilateral netting of counterparty exposures is not permitted in India. Therefore, each transaction with counterparty becomes its own netting set.
In cases where the unrated counterparty is a scheduled commercial bank, AIFIs may use the following Table to arrive at the implied ratings of the counterparty-bank and consequently, the $w_i$.

<table>
<thead>

</tbody>
</table>

AIFIs will have to continuously monitor the capital adequacy position of their counterparty banks so that the effect of any change in the implied ratings is adequately reflected in CVA capital charge calculations.

An illustration of CVA risk capital charge has been furnished in Annex 11.

5.15.3.7 Calculation of the Aggregate CCR and CVA Risk Capital Charges

The total CCR capital charge for the AIFI is determined as the sum of the following two components:

i. The sum over all counterparties of the CEM based capital charge determined as per paragraph 5.15.3.5; and

ii. The standardised CVA risk capital charge determined as per paragraph 5.15.3.6

5.15.3.8 Capital requirement for exposures to Central Counterparties (CCPs) Scope of Application

(i) Exposures to central counterparties arising from OTC derivatives transactions, exchange traded derivatives transactions and securities financing transactions (SFTs) will be subject to the counterparty credit risk treatment as indicated in this paragraph below.

(ii) Exposures arising from the settlement of cash transactions (equities, fixed income, spot FX, commodity etc.) are not subject to this treatment. The settlement of cash transactions remains subject to the treatment described in paragraph 5.15.4 of this Chapter.

---

Please refer to the revised version of Basel III capital rules (bcbs189.doc) issued by the BCBS vide press release on June 1, 2011.
(iii) When the clearing member-to-client leg of an exchange traded derivatives transaction is conducted under a bilateral agreement, both the client bank and the clearing member are to capitalise that transaction as an OTC derivative.

(iv) For the purpose of capital adequacy framework, CCPs will be considered as financial institution. Accordingly, an AIFI’s investments in the capital of CCPs will be guided in terms of paragraph 4.4.8 of this Chapter.

(v) Capital requirements will be dependent on the nature of CCPs viz. Qualifying CCPs (QCCPs) and non-Qualifying CCPs. A Qualifying CCP has been defined under paragraph 5.15.3.3 of this Chapter.

a. Regardless of whether a CCP is classified as a QCCP or not, an AIFI retains the responsibility to ensure that it maintains adequate capital for its exposures. Under Pillar 2, an AIFI should consider whether it might need to hold capital in excess of the minimum capital requirements if, for example, (i) its dealings with a CCP give rise to more risky exposures or (ii) where, given the context of that AIFI’s dealings, it is unclear that the CCP meets the definition of a QCCP.

b. AIFIs may be required to hold additional capital against their exposures to QCCPs via Pillar 2, if in the opinion of RBI, it is necessary to do so. This might be considered appropriate where, for example, an external assessment such as an Financial Sector Assessment Program (FSAP) of International Monetary Fund / World Bank has found material shortcomings in the CCP or the regulation of CCPs, and the CCP and / or the CCP regulator have not since publicly addressed the issues identified.

c. An AIFI must monitor and report to senior management and the appropriate committee of the Board (e.g. Risk Management Committee) on a regular basis (quarterly or at more frequent intervals) all of its exposures to CCPs, including exposures arising from trading through a CCP and exposures arising from CCP membership obligations such as default fund contributions.

d. Unless Reserve Bank requires otherwise, the trades with a former QCCP may continue to be capitalised as though they are with a QCCP for a period not exceeding three months from the date it ceases to qualify as a QCCP. After that time, the AIFI’s exposures with such a central counterparty must be capitalised according to rules applicable for non-QCCP.

5.15.3.9 Exposures to Qualifying CCPs (QCCPs)

(i) Trade exposures

**Client AIFI exposures to clearing member**

I. Where an AIFI is a client of the clearing member, and enters into a transaction with the clearing member acting as a financial intermediary (i.e. the clearing member completes an offsetting transaction with a QCCP), the client’s exposures to the clearing member will receive the treatment as under:

(a) The exposure amount for such trade exposure will be calculated in accordance with the Current Exposure Method (CEM) for derivatives and rules as applicable for capital adequacy for Repo / Reverse Repo-style transactions

46 Please refer to paragraph 7.3.8 of this Chapter
(b) Where settlement is legally enforceable on a net basis in an event of default and regardless of whether the counterparty is insolvent or bankrupt, the total replacement cost of all contracts relevant to the trade exposure determination can be calculated as a net replacement cost if the applicable close-out netting sets meet the requirements set out in Annex 17 of these guidelines.

(c) AIFIs will have to demonstrate that the conditions mentioned in Annex 17 are fulfilled on a regular basis by obtaining independent and reasoned legal opinion as regards legal certainty of netting of exposures to QCCPs. AIFIs may also obtain from the QCCPs, the legal opinion taken by the respective QCCPs on the legal certainty of their major activities such as settlement finality, netting, collateral arrangements (including margin arrangements); default procedures etc.

The treatment as mentioned at point (1.) above will be subject to the following conditions being met:

(i) The offsetting transactions are identified by the QCCP as client transactions and collateral to support them is held by the QCCP and / or the clearing member, as applicable, under arrangements that prevent any losses to the client due to:

a) the default or insolvency of the clearing member;

b) the default or insolvency of the clearing member’s other clients; and

c) the joint default or insolvency of the clearing member and any of its other clients.

The client AIFI must obtain an independent, written and reasoned legal opinion that concludes that, in the event of legal challenge, the relevant courts and administrative authorities would find that the client would bear no losses on account of the insolvency of an intermediary under the relevant law, including:

- the law(s) applicable to client AIFI, clearing member and QCCP;

- the law of the jurisdiction(s) of the foreign countries in which the client AIFI, clearing member or QCCP are located

- the law that governs the individual transactions and collateral; and

- the law that governs any contract or agreement necessary to meet this condition (a).

(ii) Relevant laws, regulations, rules, contractual, or administrative arrangements provide that the offsetting transactions with the defaulted or insolvent clearing member are highly likely to continue to be indirectly transacted through the QCCP, or by the QCCP, should the clearing member default or become insolvent. In such circumstances, the client positions and collateral with the QCCP will be transferred at the market value unless the client requests to close out the position at the market value. In this context, it may be clarified that if relevant laws, regulations, rules, contractual or administrative agreements provide that trades are highly likely to be ported, this condition can be considered to be met. If there is a clear precedent for transactions being ported at a QCCP and intention of the participants is to continue this practice, then these factors should be considered while assessing if trades are highly likely to be ported. The fact that QCCP documentation does not prohibit client trades from being ported is not sufficient to conclude that they are highly likely to be ported. Other evidence such as the criteria mentioned in this paragraph is necessary to make this claim.

II. Where a client is not protected from losses in the case that the clearing member and another client of the clearing member jointly default or become jointly insolvent, but
all other conditions mentioned above are met and the concerned CCP is a QCCP, a risk weight of 4% will apply to the client’s exposure to the clearing member.

III. Where the client AIFI does not meet the requirements in the above paragraphs, the AIFI will be required to capitalize its exposure (including potential CVA risk exposure) to the clearing member as a bilateral trade.

IV. Under situations in which a client enters into a transaction with the QCCP with a clearing member guaranteeing its performance, the capital requirements will be based on paragraph 5 of this Chapter.

**Treatment of posted collateral**

I. In all cases, any assets or collateral posted must, from the perspective of the AIFI posting such collateral, receive the risk weights that otherwise applies to such assets or collateral under the capital adequacy framework, regardless of the fact that such assets have been posted as collateral. Thus, collateral posted from Banking Book will receive Banking Book treatment and collateral posted from Trading Book will receive Trading Book treatment. Where assets or collateral of a clearing member or client are posted with a QCCP or a clearing member and are not held in a bankruptcy remote manner, the AIFI posting such assets or collateral must also recognise credit risk based upon the assets or collateral being exposed to risk of loss based on the creditworthiness of the entity holding such assets or collateral.

II. Collateral posted by the clearing member (including cash, securities, other pledged assets, and excess initial or variation margin, also called over-collateralisation), that is held by a custodian, and is bankruptcy remote from the QCCP, is not subject to a capital requirement for counterparty credit risk exposure to such bankruptcy remote custodian.

III. Collateral posted by a client, that is held by a custodian, and is bankruptcy remote from the QCCP, the clearing member and other clients, is not subject to a capital requirement for counterparty credit risk. If the collateral is held at the QCCP on a client’s behalf and is not held on a bankruptcy remote basis, a 2% risk weight will be applied to the collateral if the conditions established in paragraph on “client AIFI exposures to clearing members” of this section are met (mentioned above). A risk weight of 4% will be made applicable if a client is not protected from losses in the case that the clearing member and another client of the clearing member jointly default or become jointly insolvent, but all other conditions mentioned in paragraph on “client AIFI exposures to clearing members” of this section are met.

IV. If a clearing member collects collateral from a client for client cleared trades and this collateral is passed on to the QCCP, the clearing member may recognize this collateral for both the QCCP - clearing member leg and the clearing member - client leg of the client cleared trade. Therefore, initial margins (IMs) as posted by clients to

47 Where the entity holding such assets or collateral is the QCCP, a risk-weight of 2% applies to collateral included in the definition of trade exposures. The relevant risk-weight of the QCCP will apply to assets or collateral posted for other purposes.

48 In this paragraph, the word “custodian” may include a trustee, agent, pledgee, secured creditor or any other person that holds property in a way that does not give such person a beneficial interest in such property and will not result in such property being subject to legally-enforceable claims by such persons, creditors, or to a court-ordered stay of the return of such property, should such person become insolvent or bankrupt.
clearing members mitigate the exposure the clearing member has against these clients.

(ii) Default Fund Exposures to QCCPs

(a) Where a default fund is shared between products or types of business with settlement risk only (e.g. equities and bonds) and products or types of business which give rise to counterparty credit risk i.e., OTC derivatives, exchange traded derivatives or SFTs, all of the default fund contributions will receive the risk weight determined according to the formulae and methodology set forth below, without apportioning to different classes or types of business or products.

(b) However, where the default fund contributions from clearing members are segregated by product types and only accessible for specific product types, the capital requirements for those default fund exposures determined according to the formulae and methodology set forth below must be calculated for each specific product giving rise to counterparty credit risk. In case the QCCP’s prefunded own resources are shared among product types, the QCCP will have to allocate those funds to each of the calculations, in proportion to the respective product specific exposure i.e. EAD.

5.15.3.10 Exposures to Non-qualifying CCPs

(a) AIFIs must apply the Standardised Approach for credit risk according to the category of the counterparty, to their trade exposure to a non-qualifying CCP49.

(b) AIFIs must apply a risk weight of 1250% to their default fund contributions to a non-qualifying CCP.

(c) For the purposes of this paragraph, the default fund contributions of such AIFIs will include both the funded and the unfunded contributions which are liable to be paid should the CCP so require. Where there is a liability for unfunded contributions (i.e. unlimited binding commitments) the Reserve Bank will determine in its Pillar 2 assessments the amount of unfunded commitments to which 1250% risk weight should apply.

5.15.4 Failed Transactions

(a) With regard to unsettled securities and foreign exchange transactions, AIFIs are exposed to counterparty credit risk from trade date, irrespective of the booking or the accounting of the transaction. AIFIs are encouraged to develop, implement and improve systems for tracking and monitoring the credit risk exposure arising from unsettled transactions as appropriate for producing management information that facilitates action on a timely basis.

(b) AIFIs must closely monitor securities and foreign exchange transactions that have failed, starting from the day they fail for producing management information that facilitates action on a timely basis. Failed transactions give rise to risk of delayed settlement or delivery.

(c) Failure of transactions settled through a delivery-versus-payment system (DvP), providing simultaneous exchanges of securities for cash, expose AIFIs to a risk of loss on the difference between the transaction valued at the agreed settlement price and the transaction valued at current market price (i.e. positive current exposure).

49 In cases where a CCP is to be considered as non-QCCP and the exposure is to be reckoned on CCP, the applicable risk weight will be according to the ratings assigned to the CCPs.
Failed transactions where cash is paid without receipt of the corresponding receivable (securities, foreign currencies, or gold,) or, conversely, deliverables were delivered without receipt of the corresponding cash payment (non-DvP, or free delivery) expose AIFIs to a risk of loss on the full amount of cash paid or deliverables delivered. Therefore, a capital charge is required for failed transactions and must be calculated as under. The following capital treatment is applicable to all failed transactions, including transactions through recognised clearing houses and Central Counterparties. Repurchase and reverse-repurchase agreements as well as securities lending and borrowing that have failed to settle are excluded from this capital treatment.

(d) For DvP Transactions – If the payments have not yet taken place five business days after the settlement date, AIFIs are required to calculate a capital charge by multiplying the positive current exposure of the transaction by the appropriate factor as under. In order to capture the information, AIFIs will need to upgrade their information systems in order to track the number of days after the agreed settlement date and calculate the corresponding capital charge.

<table>
<thead>
<tr>
<th>Number of working days after the agreed settlement date</th>
<th>Corresponding risk multiplier (in per cent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>From 5 to 15</td>
<td>9</td>
</tr>
<tr>
<td>From 16 to 30</td>
<td>50</td>
</tr>
<tr>
<td>From 31 to 45</td>
<td>75</td>
</tr>
<tr>
<td>46 or more</td>
<td>100</td>
</tr>
</tbody>
</table>

(e) For non-DvP transactions (free deliveries) after the first contractual payment / delivery leg, the AIFI that has made the payment will treat its exposure as a loan if the second leg has not been received by the end of the business day. If the dates when two payment legs are made are the same according to the time zones where each payment is made, it is deemed that they are settled on the same day. For example, if a bank in Tokyo transfers Yen on day X (Japan Standard Time) and receives corresponding US Dollar via CHIPS on day X (US Eastern Standard Time), the settlement is deemed to take place on the same value date. AIFIs shall compute the capital requirement using the counterparty risk weights prescribed in these guidelines. However, if five business days after the second contractual payment / delivery date the second leg has not yet effectively taken place, the AIFI that has made the first payment leg will receive a risk weight of 1250% on the full amount of the value transferred plus replacement cost, if any. This treatment will apply until the second payment / delivery leg is effectively made.

5.16 Securitisation Exposures

5.16.1 General

(i) A securitisation transaction, which meets the minimum requirements, as stipulated in circular DBOD.No.BP.BC.60/21.04.048/2005-06 dated February 1, 2006 on ‘Guidelines on Securitisation of Standard Assets’, circular DBOD.No.BP.BC.103/21.04.177/2011-12 dated May 07, 2012 on ‘Revision to the Guidelines on Securitisation Transactions’ and circular DBOD.No.BP.BC-25/21.04.177/2013-14 dated July 1, 2013 on ‘Revision to the Guidelines on Securitisation Transactions-Reset of Credit Enhancement’ would qualify for the following prudential treatment of securitisation exposures for capital adequacy purposes. AIFIs’ exposures to a securitisation transaction, referred to as securitisation exposures, can include, but are not restricted to the following: as investor, as credit enhancer, as liquidity provider, as underwriter, as provider of credit risk mitigants. Cash collaterals provided as credit enhancements shall also be treated as securitisation exposures. The terms
used in this section with regard to securitisation shall be as defined in the above guidelines. Further, the following definitions shall be applicable:

(a) A ‘credit enhancing interest only strip (I/Os)’ – an on-balance sheet exposure that is recorded by the originator, which (i) represents a valuation of cash flows related to future margin income to be derived from the underlying exposures, and (ii) is subordinated to the claims of other parties to the transaction in terms of priority of repayment.

(b) ‘Implicit support’ – the support provided by an AIFI to a securitisation in excess of its predetermined contractual obligation.

(c) A ‘gain-on-sale’ – any profit realised at the time of sale of the securitised assets to SPV.

(ii) AIFIs are required to hold regulatory capital against all of their securitisation exposures, including those arising from the provision of credit risk mitigants to a securitisation transaction, investments in asset-backed securities, retention of a subordinated tranche, and extension of a liquidity facility or credit enhancement, as set forth in the following paragraphs. Repurchased securitisation exposures must be treated as retained securitisation exposures.

(iii) An originator in a securitisation transaction which does not meet the minimum requirements prescribed in the guidelines dated February 01, 2006, May 07, 2012 and July 1, 2013 and therefore does not qualify for de-recognition shall hold capital against all of the exposures associated with the securitisation transaction as if they had not been securitised. Additionally, the originator shall deduct any ‘gain on sale’ on such transaction from Tier I capital. This capital would be in addition to the capital which the AIFI is required to maintain on its other existing exposures to the securitization transaction.

(iv) Operational criteria for Credit Analysis

In addition to the conditions specified in the RBI Guidelines dated February 1, 2006, May 7, 2012 and July 1, 2013 on Securitisation of standard assets in order to qualify for de-recognition of assets securitised, the AIFI must have the information specified in paragraphs (a) through (c) below:

(a) As a general rule, an AIFI must, on an ongoing basis, have a comprehensive understanding of the risk characteristics of its individual securitisation exposures, whether on balance sheet or off balance sheet, as well as the risk characteristics of the pools underlying its securitisation exposures.

(b) AIFIs must be able to access performance information on the underlying pools on an on-going basis in a timely manner. Such information may include, as appropriate: exposure type; percentage of loans 30, 60 and 90 days past due; default rates; prepayment rates; loans in foreclosure; property type; occupancy; average credit score or other measures of creditworthiness; average loan-to-value ratio; and industry and geographic diversification.

50 For example: If in a securitisation transaction of Rs.100, the pool consists of 80 per cent of AAA securities, 10 per cent of BB securities and 10 per cent of unrated securities and the transaction does not meet the true sale criterion, then the originator will be deemed to be holding all the exposures in that transaction. Consequently, the AAA rated securities will attract a risk weight of 20 per cent and the face value of the BB rated securities and the unrated securities will be deducted. Thus the consequent impact on the capital will be Rs.21.44 (16.9% + 20).

51 Master Circular DBOD.No.BP.BC.73/21.06.001/2009-10 dated Feb 8, 2010 addressed to banks
(c) An AIFI must have a thorough understanding of all structural features of a securitisation transaction that would materially impact the performance of the AIFI’s exposures to the transaction, such as the contractual waterfall and waterfall-related triggers, credit enhancements, liquidity enhancements, market value triggers, and deal-specific definitions of default.

5.16.2 Treatment of Securitisation Exposures

(i) Credit enhancements which are first loss positions should be risk weighted at 1250%.

(ii) Any rated securitisation exposure with a long term rating of ‘B+ and below’ when not held by an originator, and a long term rating of ‘BB+ and below’ when held by the originator will receive a risk weight of 1250%.

(iii) Any unrated securitisation exposure, except an eligible liquidity facility as specified in paragraph 5.16.8 should be risk weighted at 1250%. In an unrated and ineligible liquidity facility, both the drawn and undrawn portions (after applying a CCF of 100%) shall receive a risk weight of 1250%.

(iv) The holdings of securities devolved on the originator through underwriting should be sold to third parties within three-month period following the acquisition. In case of failure to off-load within the stipulated time limit, any holding in excess of 20% of the original amount of issue, including secondary market purchases, shall receive a risk weight of 1250%.

5.16.3 Implicit Support

(i) The originator shall not provide any implicit support to investors in a securitisation transaction.

(ii) When an AIFI is deemed to have provided implicit support to a securitisation:

   a) It must, at a minimum, hold capital against all of the exposures associated with the securitisation transaction as if they had not been securitised.

   b) Furthermore, in respect of securitisation transactions where the AIFI is deemed to have provided implicit support it is required to disclose publicly that (a) it has provided non-contractual support (b) the details of the implicit support and (c) the impact of the implicit support on the AIFI’s regulatory capital.

(iii) Where a securitisation transaction contains a clean-up call and the clean up call can be exercised by the originator in circumstances where exercise of the clean up call effectively provides credit enhancement, the clean up call shall be treated as implicit support and the concerned securitisation transaction will attract the above prescriptions.

5.16.4 Application of External Ratings

The following operational criteria concerning the use of external credit assessments apply:

(i) An AIFI must apply external credit assessments from eligible external credit rating agencies consistently across a given type of securitisation exposure. Furthermore, an AIFI cannot use the credit assessments issued by one external credit rating agency for one or more tranches and those of another external credit rating agency for other positions (whether retained or purchased) within the same securitisation structure.

52 Para 12 and 13 of RBI Guidelines dated February 1, 2006 have been replaced by para 5.16.2 of this circular.
that may or may not be rated by the first external credit rating agency. Where two or more eligible external credit rating agencies can be used and these assess the credit risk of the same securitisation exposure differently, **paragraph 6.7** will apply.

(ii) If the CRM provider is not recognised as an eligible guarantor as defined in **paragraph 7.5.6**, the covered securitisation exposures should be treated as unrated.

(iii) In the situation where a credit risk mitigant is not obtained by the SPV but rather applied to a specific securitisation exposure within a given structure (e.g. ABS tranche), the AIFI must treat the exposure as if it is unrated and then use the CRM treatment outlined in **paragraph 7**.

(iv) The other aspects of application of external credit assessments will be as per guidelines given in **paragraph 6**.

(v) An AIFI is not permitted to use any external credit assessment for risk weighting purposes where the assessment is at least partly based on unfunded support provided by the bank. For example, if an AIFI buys an ABS / MBS where it provides an unfunded securitisation exposure extended to the securitisation programme (e.g. liquidity facility or credit enhancement), and that exposure plays a role in determining the credit assessment on the securitised assets/ various tranches of the ABS/MBS, the AIFI must treat the securitised assets/ various tranches of the ABS/MBS as if these were not rated. The AIFI must continue to hold capital against the other securitisation exposures it provides (e.g. against the liquidity facility and/or credit enhancement).

5.16.5 Risk Weighted Securitisation Exposures

(i) AIFIs shall calculate the risk weighted amount of an on-balance sheet securitisation exposure by multiplying the principal amount (after deduction of specific provisions) of the exposures by the applicable risk weight.

(ii) The risk-weighted asset amount of a securitisation exposure is computed by multiplying the amount of the exposure by the appropriate risk weight determined in accordance with issue specific rating assigned to those exposures by the chosen external credit rating agencies as indicated in the following tables:

<table>
<thead>
<tr>
<th>Domestic rating agencies</th>

<td>1250</td>
<td></td>
</tr>
</tbody>
</table>

(iii) The risk-weighted asset amount of a securitisation exposure in respect of MBS backed by commercial real estate exposure, as defined in paragraph 5.11 above, is computed by multiplying the amount of the exposure by the appropriate risk weight determined in accordance with issue specific rating assigned to those exposures by the chosen external credit rating agencies as indicated in the following tables:

(iv) AIFIs are not permitted to invest in unrated securities issued by an SPV as a part of the securitisation transaction. However, securitisation exposures assumed by AIFIs which may become unrated or may be deemed to be unrated, would be treated for capital adequacy purposes in accordance with the provisions of paragraph 5.16.2.

(v) There should be transfer of a significant credit risk associated with the securitised exposures to the third parties for recognition of risk transfer. In view of this, the total exposure of AIFIs to the loans securitised in the following forms should not exceed 20% of the total securitised instruments issued:

- Investments in equity / subordinate / senior tranches of securities issued by the SPV including through underwriting commitments
- Credit enhancements including cash and other forms of collaterals including over-collateralisation, but excluding the credit enhancing interest only strip
- Liquidity support.

If an AIFI exceeds the above limit, the excess amount would be risk weighted at 1250 per cent. Credit exposure on account of interest rate swaps/ currency swaps entered into with the SPV will be excluded from the limit of 20 per cent as this would not be within the control of the AIFI.

(vi) If an originating AIFI fails to meet the requirement laid down in the paragraphs 1.1 to 1.7 of Section A / paragraphs 1.1 to 1.6 of Section B of the circular DBOD.No.BP.BC.103/21.04.177/ 2011-12 dated May 07, 2012 on ‘Revision to the Guidelines on Securitisation Transactions’, it will have to maintain capital for the securitized assets/ assets sold as if these were not securitized/ sold. This capital would be in addition to the capital which the bank is required to maintain on its other existing exposures to the securitisation transaction.

(vii) The investing AIFIs will assign a risk weight of 1250 per cent to the exposures relating to securitization/ or assignment where the requirements in the paragraphs 2.1 to 2.3 of Section A / or paragraphs 2.1 to 2.8 of Section B, respectively, of the circular DBOD.No.BP.BC.103/21.04.177/ 2011-12 dated May 07, 2012 on ‘Revision to the Guidelines on Securitisation Transactions’ dated May 07, 2012 are not met.

(viii) Under the transactions involving transfer of assets through direct assignment of cash flows and the underlying securities, the capital adequacy treatment for direct purchase of corporate loans will be as per the rules applicable to corporate loans directly originated by the AIFIs. Similarly, the capital adequacy treatment for direct purchase of retail loans, will be as per the rules applicable to retail portfolios directly originated by AIFIs except in cases where the individual accounts have been classified as NPA, in which case usual capital adequacy norms as applicable to retail NPAs will apply. No benefit in terms of reduced risk weights will be available to
purchased retail loans portfolios based on rating because this is not envisaged under the Basel II Standardized Approach for credit risk.

5.16.6 Off-Balance Sheet Securitisation Exposures

(i) AIFIs shall calculate the risk weighted amount of a rated off-balance sheet securitisation exposure by multiplying the credit equivalent amount of the exposure by the applicable risk weight. The credit equivalent amount should be arrived at by multiplying the principal amount of the exposure (after deduction of specific provisions) with a 100 per cent CCF, unless otherwise specified.

(ii) If the off-balance sheet exposure is not rated, it must be deducted from capital, except an unrated eligible liquidity facility for which the treatment has been specified separately in paragraph 5.16.8.

5.16.7 Recognition of Credit Risk Mitigants (CRMs)

(i) The treatment below applies to an AIFI that has obtained a credit risk mitigant on a securitisation exposure. Credit risk mitigant include guarantees and eligible collateral as specified in these guidelines. Collateral in this context refers to that used to hedge the credit risk of a securitisation exposure rather than for hedging the credit risk of the underlying exposures of the securitisation transaction.

(ii) When an AIFI other than the originator provides credit protection to a securitisation exposure, it must calculate a capital requirement on the covered exposure as if it were an investor in that securitisation. If an AIFI provides protection to an unrated credit enhancement, it must treat the credit protection provided as if it were directly holding the unrated credit enhancement.

(iii) Capital requirements for the guaranteed / protected portion will be calculated according to CRM methodology for the standardised approach as specified in paragraph 7 below. Eligible collateral is limited to that recognised under these guidelines in paragraph 7.3.5. For the purpose of setting regulatory capital against a maturity mismatch between the CRM and the exposure, the capital requirement will be determined in accordance with paragraph 7.6. When the exposures being hedged have different maturities, the longest maturity must be used applying the methodology prescribed in paragraphs 7.6.3 and 7.6.4.

5.16.8 Liquidity Facilities

(i) A liquidity facility will be considered as an ‘eligible’ facility only if it satisfies all minimum requirements prescribed in the guidelines issued on February 1, 2006. The rated liquidity facilities will be risk weighted or deducted as per the appropriate risk weight determined in accordance with the specific rating assigned to those exposures by the chosen External Credit Assessment Institutions (ECAIs) as indicated in the tables presented above.

(ii) The unrated eligible liquidity facilities will be exempted from deductions and treated as follows.

(a) The drawn and undrawn portions of an unrated eligible liquidity facility would attract a risk weight equal to the highest risk weight assigned to any of the underlying individual exposures covered by this facility.

(b) The undrawn portion of an unrated eligible liquidity facility will attract a credit conversion factor of 50%.

---

54 Master Circular DBOD.No.BP.:BC.73 / 21.06.001 / 2009-10 dated Feb 8, 2010 addressed to banks.
5.16.9 Re-Securitisation Exposures/ Synthetic Securitisations/ Securitisation with Revolving Structures (with or without early amortization features)

At present, AIFIs are not permitted to assume exposures relating to re-securitisation / Synthetic Securitisations/ Securitisations with Revolving Structures (with or without early amortization features), as defined in circular DBOD.No.BP.BC.103/21.04.177/ 2011-12 dated May 07, 2012 on ‘Revision to the Guidelines on Securitisation Transactions’. However, if AIFIs have invested in CDOs and other similar securitization exposures through their overseas branches before May 07, 2012, some of these exposures may be in the nature of re-securitisation. For such exposures, the risk weights would be assigned as under:

5.17 Capital Adequacy Requirement for Credit Default Swap (CDS) Positions in the Banking Book

5.17.1 Recognition of External / Third-party CDS Hedges

5.17.1.1 In case of Banking Book positions hedged by bought CDS positions, no exposure will be reckoned against the reference entity / underlying asset in respect of the hedged exposure, and exposure will be deemed to have been substituted by the protection seller, if the following conditions are satisfied:

(a) Operational requirements mentioned in paragraph 4 of circular DBOD.BP.BC.No.61/21.06.203/2011-12 dated November 30, 2011 addressed to banks on Prudential Guidelines on Credit Default Swaps (CDS) are met (refer to Annex 6 of these guidelines);

(b) The risk weight applicable to the protection seller under the Standardised Approach for credit risk is lower than that of the underlying asset; and

(c) There is no maturity mismatch between the underlying asset and the reference / deliverable obligation. If this condition is not satisfied, then the amount of credit protection to be recognised should be computed as indicated in paragraph 5.17.1.3 (ii) below.

5.17.1.2 If the conditions 5.17.1.1 (a) and (b) above are not satisfied or the AIFI breaches any of these conditions subsequently, the AIFI shall reckon the exposure on the underlying
asset; and the CDS position will be transferred to Trading Book where it will be subject to specific risk, counterparty credit risk and general market risk (wherever applicable) capital requirements as applicable to Trading Book.

5.17.1.3 The unprotected portion of the underlying exposure should be risk-weighted as applicable under the Standardised Approach for credit risk. The amount of credit protection shall be adjusted if there are any mismatches between the underlying asset/obligation and the reference/deliverable asset/obligation with regard to asset or maturity. These are dealt with in detail in the following paragraphs.

(i) **Asset Mismatches:** Asset mismatch will arise if the underlying asset is different from the reference asset or deliverable obligation. Protection will be reckoned as available by the protection buyer only if the mismatched assets meet the requirements that (1) the reference obligation or deliverable obligation ranks pari passu with or is junior to the underlying obligation, and (2) the underlying obligation and reference obligation or deliverable obligation share the same obligor (i.e. the same legal entity) and legally enforceable cross-default or cross-acceleration clauses are in place.

(ii) **Maturity Mismatches:** The protection buyer would be eligible to reckon the amount of protection if the maturity of the credit derivative contract were to be equal or more than the maturity of the underlying asset. If, however, the maturity of the CDS contract is less than the maturity of the underlying asset, then it would be construed as a maturity mismatch. In case of maturity mismatch the amount of protection will be determined in the following manner:

   a. If the residual maturity of the credit derivative product is less than three months, no protection will be recognized.

   b. If the residual maturity of the credit derivative contract is three months or more, protection proportional to the period for which it is available will be recognized.

When there is a maturity mismatch the following adjustment will be applied.

\[
Pa = P \times \left( t - 0.25 \right) \div \left( T - 0.25 \right)
\]

Where:

- \( Pa \) = value of the credit protection adjusted for maturity mismatch
- \( P \) = credit protection
- \( t \) = min (T, residual maturity of the credit protection arrangement) expressed in years
- \( T \) = min (5, residual maturity of the underlying exposure) expressed in years

*Example:* Suppose the underlying asset is a corporate bond of Face Value of Rs.100 where the residual maturity is of 5 years and the residual maturity of the CDS is 4 years. The amount of credit protection is computed as under:

\[
100 \times \left( \left( 4 - 0.25 \right) \div \left( 5 - 0.25 \right) \right) = 100 \times (3.75 \div 4.75) = 78.95
\]

   c. Once the residual maturity of the CDS contract reaches three months, protection ceases to be recognised.

5.17.2 Internal Hedges

AIFIs can use CDS contracts to hedge against the credit risk in their existing corporate bonds portfolios. An AIFI can hedge a Banking Book credit risk exposure either by an
internal hedge (the protection purchased from the trading desk of the bank and held in the Trading Book) or an external hedge (protection purchased from an eligible third party protection provider). When an AIFI hedges a Banking Book credit risk exposure (corporate bonds) using a CDS booked in its Trading Book (i.e. using an internal hedge), the Banking Book exposure is not deemed to be hedged for capital purposes unless the AIFI transfers the credit risk from the Trading Book to an eligible third party protection provider through a CDS meeting the requirements of paragraph 5.17 vis-à-vis the Banking Book exposure. Where such third party protection is purchased and is recognised as a hedge of a Banking Book exposure for regulatory capital purposes, no capital is required to be maintained on internal and external CDS hedge. In such cases, the external CDS will act as indirect hedge for the Banking Book exposure and the capital adequacy in terms of paragraph 5.17, as applicable for external/third party hedges, will be applicable.

6. External Credit Assessments

6.1 Eligible Credit Rating Agencies

6.1.1 Reserve Bank has undertaken the detailed process of identifying the eligible credit rating agencies, whose ratings may be used by AIFIs for assigning risk weights for credit risk. In line with the provisions of the Revised Framework\(^{55}\), where the facility provided by the AIFIs possesses rating assigned by an eligible credit rating agency, the risk weight of the claim will be based on this rating.

6.1.2 In accordance with the principles laid down in the Revised Framework, the Reserve Bank of India has decided that AIFIs may use the ratings of the following domestic credit rating agencies (arranged in alphabetical order) for the purposes of risk weighting their claims for capital adequacy purposes:

(a) Brickwork Ratings India Pvt. Limited (Brickwork);
(b) Credit Analysis and Research Limited;
(c) CRISIL Limited;
(d) ICRA Limited;
(e) India Ratings and Research Private Limited (India Ratings); and
(f) ACUITE Ratings & Research Ltd. (ACUITE)\(^{56}\)

6.1.2.1 The Reserve Bank of India has decided that AIFIs may use the ratings of the following international credit rating agencies (arranged in alphabetical order) for the purposes of risk weighting their claims for capital adequacy purposes where specified:

a. Fitch;
b. Moody's; and
c. Standard & Poor's

6.2 Scope of Application of External Ratings

6.2.1 AIFIs should use the chosen credit rating agencies and their ratings consistently for each type of claim, for both risk weighting and risk management purposes. AIFIs will not be allowed to "cherry pick" the assessments provided by different credit rating agencies and to arbitrarily change the use of credit rating agencies. If an AIFI has decided to use the ratings of some of the chosen credit rating agencies for a given type of claim, it can use only the ratings of those credit rating agencies, despite the fact that some of these claims may be

---

\(^{56}\) Please refer to circular DBOD.BP.BC.No.59/21.06.007/2013-14 dated October 17, 2013 addressed to banks.
rated by other chosen credit rating agencies whose ratings the AIFI has decided not to use. AIFI shall not use one agency’s rating for one corporate bond, while using another agency’s rating for another exposure to the same counterparty, unless the respective exposures are rated by only one of the chosen credit rating agencies, whose ratings the AIFI has decided to use. External assessments for one entity within a corporate group cannot be used to risk weight other entities within the same group.

6.2.2 AIFIs must disclose the names of the credit rating agencies that they use for the risk weighting of their assets, the risk weights associated with the particular rating grades as determined by Reserve Bank through the mapping process for each eligible credit rating agency as well as the aggregated risk weighted assets as required vide Table DF-4 of Annex 16.

6.2.3 To be eligible for risk-weighting purposes, the external credit assessment must take into account and reflect the entire amount of credit risk exposure the AIFI has with regard to all payments owed to it. For example, if an AIFI is owed both principal and interest, the assessment must fully take into account and reflect the credit risk associated with timely repayment of both principal and interest.

6.2.4 To be eligible for risk weighting purposes, the rating should be in force and confirmed from the monthly bulletin of the concerned rating agency. The rating agency should have reviewed the rating at least once during the previous 15 months.

6.2.5 An eligible credit assessment must be publicly available. In other words, a rating must be published in an accessible form and included in the external credit rating agency’s transition matrix. Consequently, ratings that are made available only to the parties to a transaction do not satisfy this requirement.

6.2.6 For assets in the AIFI’s portfolio that have contractual maturity less than or equal to one year, short term ratings accorded by the chosen credit rating agencies would be relevant. For other assets which have a contractual maturity of more than one year, long term ratings accorded by the chosen credit rating agencies would be relevant.

6.2.7 Cash credit exposures tend to be generally rolled over and also tend to be drawn on an average for a major portion of the sanctioned limits. Hence, even though a cash credit exposure may be sanctioned for period of one year or less, these exposures should be reckoned as long term exposures and accordingly the long term ratings accorded by the chosen credit rating agencies will be relevant. Similarly, AIFIs (if permitted to extend cash credit facility) may use long-term ratings of a counterparty as a proxy for an unrated short-term exposure on the same counterparty subject to strict compliance with the requirements for use of multiple rating assessments and applicability of issue rating to issuer / other claims as indicated in paragraphs 6.4, 6.5, 6.7 and 6.8 below.

6.3 Mapping Process
This Capital Framework recommends development of a mapping process to assign the ratings issued by eligible credit rating agencies to the risk weights available under the Standardised risk weighting framework. The mapping process is required to result in a risk weight assignment consistent with that of the level of credit risk. A mapping of the credit ratings awarded by the chosen domestic credit rating agencies has been furnished below in paragraphs 6.4.1 and 6.5.4, which should be used by AIFIs in assigning risk weights to the various exposures.

6.4 Long Term Ratings
6.4.1 On the basis of the above factors as well as the data made available by the rating
agencies, the ratings issued by the chosen domestic credit rating agencies have been mapped to the appropriate risk weights applicable as per the Standardised approach under the Revised Framework. The rating-risk weight mapping furnished in the Table 12 below shall be adopted by all AIFIs in India:

Table 12: Risk Weight Mapping of Long Term Ratings of the chosen Domestic Rating Agencies

</table>

6.4.2 Where “+” or “-” notation is attached to the rating, the corresponding main rating category risk weight should be used. For example, A+ or A- would be considered to be in the A rating category and assigned 50 per cent risk weight.

6.4.3 If an issuer has a long-term exposure with an external long term rating that warrants a risk weight of 150 per cent, all unrated claims on the same counter-party, whether short-term or long-term, should also receive a 150 per cent risk weight, unless the AIFI uses recognised credit risk mitigation techniques for such claims.

6.5 Short Term Ratings

6.5.1 For risk-weighting purposes, short-term ratings are deemed to be issue-specific. They can only be used to derive risk weights for claims arising from the rated facility. They cannot be generalised to other short-term claims. In no event can a short-term rating be used to support a risk weight for an unrated long-term claim. Short-term assessments may only be used for short-term claims against banks and corporates.

6.5.2 Notwithstanding the above restriction on using an issue specific short term rating for other short term exposures, the following broad principles will apply. The unrated short term claim on counterparty will attract a risk weight of at least one level higher than the risk weight applicable to the rated short term claim on that counter-party. If a short-term rated facility to counterparty attracts a 20 per cent or a 50 per cent risk-weight, unrated short-term claims to the same counter-party cannot attract a risk weight lower than 30 per cent or 100 per cent respectively.

6.5.3 Similarly, if an issuer has a short-term exposure with an external short term rating that warrants a risk weight of 150 per cent, all unrated claims on the same counter-party, whether long-term or short-term, should also receive a 150 per cent risk weight, unless the AIFI uses recognised credit risk mitigation techniques for such claims.

6.5.4 In respect of the issue specific short term ratings the following risk weight mapping shall be adopted by AIFIs:
Table 13: Risk Weight Mapping of Short Term Ratings of Domestic Rating Agencies

</tr>
</tbody>
</table>

6.5.5 Where “+” or “-” notation is attached to the rating, the corresponding main rating category risk weight should be used for A2 and below, unless specified otherwise. For example, A2+ or A2- would be considered to be in the A2 rating category and assigned 50 per cent risk weight.

6.5.6 The above risk weight mapping of both long term and short term ratings of the chosen domestic rating agencies would be reviewed annually by the Reserve Bank.

6.6 Use of Unsolicited Ratings

A rating would be treated as solicited only if the issuer of the instrument has requested the credit rating agency for the rating and has accepted the rating assigned by the agency. As a general rule, AIFIs should use only solicited rating from the chosen credit rating agencies. No ratings issued by the credit rating agencies on an unsolicited basis should be considered for risk weight calculation as per the Standardised Approach.

6.7 Use of Multiple Rating Assessments

AIFIs shall be guided by the following in respect of exposures / obligors having multiple ratings from the chosen credit rating agencies chosen by the AIFI for the purpose of risk weight calculation:

(i) If there is only one rating by a chosen credit rating agency for a particular claim, that rating would be used to determine the risk weight of the claim.

(ii) If there are two ratings accorded by chosen credit rating agencies that map into different risk weights, the higher risk weight should be applied.

(iii) If there are three or more ratings accorded by chosen credit rating agencies with different risk weights, the ratings corresponding to the two lowest risk weights should be referred to and the higher of those two risk weights should be applied. i.e., the second lowest risk weight.

6.8 Applicability of ‘Issue Rating’ to issuer/ other claims

6.8.1 Where an AIFI invests in a particular issue that has an issue specific rating by a chosen credit rating agency the risk weight of the claim will be based on this assessment. Where the AIFI’s claim is not an investment in a specific assessed issue, the following
general principles will apply:

(i) In circumstances where the borrower has a specific assessment for an issued debt - but the AIFI’s claim is not an investment in this particular debt - the rating applicable to the specific debt (where the rating maps into a risk weight lower than that which applies to an unrated claim) may be applied to the AIFI’s unassessed claim only if this claim ranks pari passu or senior to the specific rated debt in all respects and the maturity of the unassessed claim is not later than the maturity of the rated claim, except where the rated claim is a short term obligation as specified in paragraph 6.5.2. If not, the rating applicable to the specific debt cannot be used and the unassessed claim will receive the risk weight for unrated claims.

(ii) In circumstances where the borrower has an issuer assessment, this assessment typically applies to senior unsecured claims on that issuer. Consequently, only senior claims on that issuer will benefit from a high quality issuer assessment. Other unassessed claims of a highly assessed issuer will be treated as unrated. If either the issuer or a single issue has a low quality assessment (mapping into a risk weight equal to or higher than that which applies to unrated claims), an unassessed claim on the same counterparty that ranks pari-passu or is subordinated to either the senior unsecured issuer assessment or the exposure assessment will be assigned the same risk weight as is applicable to the low quality assessment.

(iii) Where an AIFI intends to extend an issuer or an issue specific rating assigned by a chosen credit rating agency to any other exposure which the AIFI has on the same counterparty and which meets the above criterion, it should be extended to the entire amount of credit risk exposure the AIFI has with regard to that exposure i.e., both principal and interest.

(iv) With a view to avoiding any double counting of credit enhancement factors, no recognition of credit risk mitigation techniques should be taken into account if the credit enhancement is already reflected in the issue specific rating accorded by a chosen credit rating agency relied upon by the AIFI.

(v) Where unrated exposures are risk weighted based on the rating of an equivalent exposure to that borrower, the general rule is that foreign currency ratings would be used only for exposures in foreign currency.

7. Credit Risk Mitigation

7.1 General Principles

7.1.1 AIFIs use a number of techniques to mitigate the credit risks to which they are exposed. For example, exposures may be collateralised in whole or in part by cash or securities, deposits from the same counterparty, guarantee of a third party, etc. The revised approach to credit risk mitigation allows a wider range of credit risk mitigants to be recognised for regulatory capital purposes than is permitted under the 1988 Framework provided these techniques meet the requirements for legal certainty as described in

57 In a case where a short term claim on a counterparty is rated as A1+ and a long term claim on the same counterparty is rated as AAA, then an AIFI may assign a 30 per cent risk weight to an unrated short term claim and 20 per cent risk weight to an unrated long term claim on that counterparty where the seniority of the claim ranks pari-passu with the rated claims and the maturity of the unrated claim is not later than the rated claim. In a similar case where a short term claim is rated A1+ and a long term claim is rated A, the AIFI may assign 50 per cent risk weight to an unrated short term or long term claim.
paragraph 7.2 below. Credit risk mitigation approach as detailed in this section is applicable to the banking book exposures. This will also be applicable for calculation of the counterparty risk charges for OTC derivatives and repo-style transactions booked in the trading book.

7.1.2 The general principles applicable to use of credit risk mitigation techniques are as under:

(i) No transaction in which Credit Risk Mitigation (CRM) techniques are used should receive a higher capital requirement than an otherwise identical transaction where such techniques are not used.

(ii) The effects of CRM will not be double counted. Therefore, no additional supervisory recognition of CRM for regulatory capital purposes will be granted on claims for which an issue-specific rating is used that already reflects that CRM.

(iii) Principal-only ratings will not be allowed within the CRM framework.

(iv) While the use of CRM techniques reduces or transfers credit risk, it simultaneously may increase other risks (residual risks). Residual risks include legal, operational, liquidity and market risks. Therefore, it is imperative that AIFIs employ robust procedures and processes to control these risks, including strategy; consideration of the underlying credit; valuation; policies and procedures; systems; control of roll-off risks; and management of concentration risk arising from the AIFI’s use of CRM techniques and its interaction with the AIFI's overall credit risk profile. Where these risks are not adequately controlled, Reserve Bank may impose additional capital charges or take other supervisory actions. The disclosure requirements prescribed in Table DF-5 of Annex 16 must also be observed for AIFIs to obtain capital relief in respect of any CRM techniques.

7.2 Legal Certainty

In order for AIFIs to obtain capital relief for any use of CRM techniques, the following minimum standards for legal documentation must be met. All documentation used in collateralised transactions and guarantees must be binding on all parties and legally enforceable in all relevant jurisdictions. AIFIs must have conducted sufficient legal review, which should be well documented, to verify this requirement. Such verification should have a well-founded legal basis for reaching the conclusion about the binding nature and enforceability of the documents. AIFIs should also undertake such further review as necessary to ensure continuing enforceability.

7.3 Credit Risk Mitigation Techniques - Collateralised Transactions

7.3.1 A Collateralised Transaction is one in which:

(i) AIFIs have a credit exposure and that credit exposure is hedged in whole or in part by collateral posted by a counterparty or by a third party on behalf of the counterparty. Here, “counterparty” is used to denote a party to whom an AIFI has an on- or off-balance sheet credit exposure.

(ii) AIFIs have a specific lien on the collateral and the requirements of legal certainty are met.

7.3.2 Overall framework and minimum conditions

The framework allows adoption of either the simple approach, which, similar to the 1988 Accord, substitutes the risk weighting of the collateral for the risk weighting of the counterparty for the collateralised portion of the exposure (generally subject to a 20 per cent floor), or the comprehensive approach, which allows fuller offset of collateral against
exposures, by effectively reducing the exposure amount by the value ascribed to the collateral. AIFIs shall adopt the Comprehensive Approach, which allows fuller offset of collateral against exposures, by effectively reducing the exposure amount by the value ascribed to the collateral. Under this approach, AIFIs, which take eligible financial collateral (e.g., cash or securities, more specifically defined below), are allowed to reduce their credit exposure to a counterparty when calculating their capital requirements to take account of the risk mitigating effect of the collateral. Credit risk mitigation is allowed only on an account-by-account basis, even within regulatory retail portfolio. However, before capital relief will be granted the standards set out below must be met:

(i) In addition to the general requirements for legal certainty, the legal mechanism by which collateral is pledged or transferred must ensure that the AIFI has the right to liquidate or take legal possession of it, in a timely manner, in the event of the default, insolvency or bankruptcy (or one or more otherwise-defined credit events set out in the transaction documentation) of the counterparty (and, where applicable, of the custodian holding the collateral). Furthermore AIFI must take all steps necessary to fulfill those requirements under the law applicable to the AIFI’s interest in the collateral for obtaining and maintaining an enforceable security interest, e.g. by registering it with a registrar.

(ii) In order for collateral to provide protection, the credit quality of the counterparty and the value of the collateral must not have a material positive correlation. For example, securities issued by the counterparty - or by any related group entity - would provide little protection and so would be ineligible.

(iii) AIFIs must have clear and robust procedures for the timely liquidation of collateral to ensure that any legal conditions required for declaring the default of the counterparty and liquidating the collateral are observed, and that collateral can be liquidated promptly.

(iv) Where the collateral is held by a custodian, AIFIs must take reasonable steps to ensure that the custodian segregates the collateral from its own assets.

(v) AIFIs must ensure that sufficient resources are devoted to the orderly operation of margin agreements with OTC derivative and securities-financing counterparties, as measured by the timeliness and accuracy of its outgoing calls and response time to incoming calls. AIFIs must have collateral management policies in place to control, monitor and report the following to the Board or one of its Committees:

- the risk to which margin agreements exposes them (such as the volatility and liquidity of the securities exchanged as collateral),
- the concentration risk to particular types of collateral,
- the reuse of collateral (both cash and non-cash) including the potential liquidity shortfalls resulting from the reuse of collateral received from counterparties, and
- the surrender of rights on collateral posted to counterparties.

7.3.3 A capital requirement will be applied to an AIFI on either side of the collateralised transaction: for example, both repos and reverse repos will be subject to capital requirements. Likewise, both sides of securities lending and borrowing transactions will be subject to explicit capital charges, as will the posting of securities in connection with a derivative exposure or other borrowing.
**7.3.4 The Comprehensive Approach**

(i) In the comprehensive approach, when taking collateral, AIFIs will need to calculate their adjusted exposure to a counterparty for capital adequacy purposes in order to take account of the effects of that collateral. AIFIs are required to adjust both the amount of the exposure to the counterparty and the value of any collateral received in support of that counterparty to take account of possible future fluctuations in the value of either, occasioned by market movements. These adjustments are referred to as ‘haircuts’. The application of haircuts will produce volatility adjusted amounts for both exposure and collateral. The volatility adjusted amount for the exposure will be higher than the exposure and the volatility adjusted amount for the collateral will be lower than the collateral, unless either side of the transaction is cash. In other words, the ‘haircut’ for the exposure will be a premium factor and the ‘haircut’ for the collateral will be a discount factor. It may be noted that the purpose underlying the application of haircut is to capture the market-related volatility inherent in the value of exposures as well as of the eligible financial collaterals. Since the value of credit exposures acquired by AIFIs in the course of their operations, would not be subject to market volatility, (since the loan disbursement / investment would be a “cash” transaction) though the value of eligible financial collateral would be, the haircut stipulated in Table-14 (paragraph 7.3.7) would apply in respect of credit transactions only to the eligible collateral but not to the credit exposure of the AIFI. On the other hand, exposures of AIFIs, arising out of repo-style transactions would require upward adjustment for volatility, as the value of security sold/lent/pledged in the repo transaction, would be subject to market volatility. Hence, such exposures shall attract haircut.

(ii) Additionally where the exposure and collateral are held in different currencies an additional downwards adjustment must be made to the volatility adjusted collateral amount to take account of possible future fluctuations in exchange rates.

(iii) Where the volatility-adjusted exposure amount is greater than the volatility-adjusted collateral amount (including any further adjustment for foreign exchange risk), AIFIs shall calculate their risk-weighted assets as the difference between the two multiplied by the risk weight of the counterparty. The framework for performing calculations of capital requirement is indicated in paragraph 7.3.6.

**7.3.5 Eligible Financial Collateral**

The following collateral instruments are eligible for recognition in the comprehensive approach:

(i) **Cash** (as well as certificates of deposit or comparable instruments, including fixed deposit receipts, issued by the lending AIFI) on deposit with the AIFI which is incurring the counterparty exposure.

(ii) **Gold**: Gold would include both bullion and jewellery. However, the value of the collateralised jewellery should be arrived at after notionally converting these to 99.99 purity.

(iii) **Securities** issued by Central and State Governments

(iv) **Kisan Vikas Patra** and National Savings Certificates provided no lock-in period is operational and if they can be encashed within the holding period.

(v) **Life insurance** policies with a declared surrender value of an insurance company which is regulated by an insurance sector regulator.
(vi) Debt securities rated by a chosen Credit Rating Agency in respect of which AIFIs should be sufficiently confident about the market liquidity where these are either:

(a) Attracting 100 per cent or lesser risk weight i.e., rated at least BBB(-) when issued by public sector entities and other entities (including banks and Primary Dealers); or

(vii) Debt Securities not rated by a chosen Credit Rating Agency in respect of which AIFIs should be sufficiently confident about the market liquidity where these are:

(a) issued by a bank; and

(b) listed on a recognised exchange; and

(c) classified as senior debt; and

(d) all rated issues of the same seniority by the issuing bank are rated at least BBB(-) or CARE A3/CRISIL A3/India Ratings and Research Private Limited (India Ratings) A3/ICRA A3/Brickwork A3/ACUITE A3/INFOMERICS A3 by a chosen Credit Rating Agency; and

(e) the AIFI holding the securities as collateral has no information to suggest that the issue justifies a rating below BBB(-) or CARE A3/CRISIL A3/India Ratings and Research Private Limited (India Ratings) A3/ICRA A3/Brickwork A3/ACUITE A3/INFOMERICS A3 (as applicable) and;

(f) AIFIs should be sufficiently confident about the market liquidity of the security.

(viii) Units of Mutual Funds regulated by the securities regulator of the jurisdiction of the AIFI’s operation mutual funds where:

(a) a price for the units is publicly quoted daily i.e., where the daily NAV is available in public domain; and

(b) Mutual fund is limited to investing in the instruments listed in this paragraph.

(ix) Re-securitisations, irrespective of any credit ratings, are not eligible financial collateral.

7.3.6 Calculation of capital requirement

For a collateralised transaction, the exposure amount after risk mitigation is calculated as follows:

\[ E^* = \max \{0, [E \times (1 + H_e) - C \times (1 - H_c - H_f)]\} \]

58 A debenture would meet the test of liquidity if it is traded on a recognised stock exchange(s) on at least 90 per cent of the trading days during the preceding 365 days. Further, liquidity can be evidenced in the trading during the previous one month in the recognised stock exchange if there are a minimum of 25 trades of marketable lots in securities of each issuer.
where:

\[ E^* = \text{the exposure value after risk mitigation} \]
\[ E = \text{current value of the exposure for which the collateral qualifies as a risk mitigant} \]
\[ H_e = \text{haircut appropriate to the exposure} \]
\[ C = \text{the current value of the collateral received} \]
\[ H_c = \text{haircut appropriate to the collateral} \]
\[ H_{fx} = \text{haircut appropriate for currency mismatch between the collateral and exposure} \]

The exposure amount after risk mitigation (i.e., \( E^* \)) will be multiplied by the risk weight of the counterparty to obtain the risk-weighted asset amount for the collateralised transaction. Illustrative examples calculating the effect of Credit Risk Mitigation is furnished in Annex 7.

7.3.7 Haircuts

(i) In principle, AIFIs have two ways of calculating the haircuts: (i) standard supervisory haircuts, using parameters set by the Basel Committee, and (ii) own-estimate haircuts, using AIFIs’ own internal estimates of market price volatility. AIFIs in India shall use only the standard supervisory haircuts for both the exposure as well as the collateral.

(ii) The Standard Supervisory Haircuts (assuming daily mark-to-market, daily re-margining and a 10 business-day holding period)\(^{59}\), expressed as percentages, would be as furnished in Table 14.

(iii) The ratings indicated in Table 14 represent the ratings assigned by the domestic rating agencies. In the case of exposures toward debt securities issued by foreign Central Governments and foreign corporates, the haircut may be based on ratings of the international rating agencies, as indicated in Table 15.

(iv) Sovereign will include Reserve Bank of India, DICGC and CGTMSE, CRGFTLIH which are eligible for zero per cent risk weight.

(v) AIFIs may apply a zero haircut for eligible collateral where it is a National Savings Certificate, Kisan Vikas Patras, surrender value of insurance policies and AIFIs’ own deposits.

(vi) The standard supervisory haircut for currency risk where exposure and collateral are denominated in different currencies is eight per cent (also based on a 10-business day holding period and daily mark-to-market).

</tbody>
</table>

(vii) For transactions in which AIFIs’ exposures are unrated or AIFI lends non-eligible instruments (i.e. non-investment grade corporate securities), the haircut to be applied on an exposure should be 25 per cent. (Since, at present, the repos are allowed only

60 Including those backed by securities issued by foreign sovereigns and foreign corporates.
in the case of Government securities, AIFIs are not likely to have any exposure which will attract the provisions of this clause. However, this would be relevant, if in future, repos/security lending transactions are permitted in the case of unrated corporate securities).

(viii) Where the collateral is a basket of assets, the haircut on the basket will be,

\[ H = \sum_i a_i H_i \]

where \( a_i \) is the weight of the asset (as measured by the amount/value of the asset in units of currency) in the basket and \( H_i \), the haircut applicable to that asset.

(ix) Adjustment for different holding periods:
For some transactions, depending on the nature and frequency of the revaluation and remargining provisions, different holding periods (other than 10 business-days) are appropriate. The framework for collateral haircuts distinguishes between repo-style transactions (i.e. repo/reverse repos and securities lending/borrowing), “other capital-market-driven transactions” (i.e. OTC derivatives transactions and margin lending) and secured lending. In capital-market-driven transactions and repo-style transactions, the documentation contains remargining clauses; in secured lending transactions, it generally does not. In view of different holding periods, in the case of these transactions, the minimum holding period shall be taken as indicated below:

<table>
<thead>
<tr>
<th>Transaction type</th>
<th>Minimum holding Period</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Repo-style transaction</td>
<td>five business days</td>
<td>daily remargining</td>
</tr>
<tr>
<td>Other capital market transactions</td>
<td>ten business days</td>
<td>daily remargining</td>
</tr>
<tr>
<td>Secured lending</td>
<td>twenty business days</td>
<td>daily revaluation</td>
</tr>
</tbody>
</table>

The haircut for the transactions with other than 10 business-days minimum holding period, as indicated above, will have to be adjusted by scaling up/down the haircut for 10 business–days indicated in the Table 14, as per the formula given in paragraph 7.3.7 (xi) below.

(x) Adjustment for non-daily mark-to-market or remargining:
In case a transaction has margining frequency different from daily margining assumed, the applicable haircut for the transaction will also need to be adjusted by using the formula given in paragraph 7.3.7 (xi) below.

(xi) Formula for adjustment for different holding periods and / or non-daily mark-to-market orremargining:
Adjustment for the variation in holding period and margining / mark-to-market, as indicated in paragraph (ix) and (x) above will be done as per the following formula:

\[ H = H_{10} \sqrt{\frac{N_R + (T_M - 1)}{10}} \]

Where:
- \( H \) = haircut
- \( H_{10} \) = 10-business-day standard supervisory haircut for instrument
- \( N_R \) = actual number of business days between remargining for capital market transactions or revaluation for secured transactions.
- \( T_M \) = minimum holding period for the type of transaction

7.3.8 Capital Adequacy Framework for Repo-/Reverse Repo-style transactions.
The repo-style transactions also attract capital charge for Counterparty credit risk (CCR), in
addition to the credit risk and market risk. The CCR is defined as the risk of default by the counterparty in a repo-style transaction, resulting in non-delivery of the security lent/pledged/sold or non-repayment of the cash.

A. Treatment in the books of the borrower of funds:

(i) Where an AIFI has borrowed funds by selling / lending or posting, as collateral, of securities, the ‘Exposure’ will be an off-balance sheet exposure equal to the 'market value' of the securities sold/lent as scaled up after applying appropriate haircut. For the purpose, the haircut as per Table 14 would be used as the basis which should be applied by using the formula in paragraph 7.3.7 (xi), to reflect minimum (prescribed) holding period of five business-days for repo-style transactions and the variations, if any, in the frequency of re-margining, from the daily margining assumed for the standard supervisory haircut. The 'off-balance sheet exposure' will be converted into 'on-balance sheet' equivalent by applying a credit conversion factor of 100 per cent, as per item 5 in Table 8 (paragraph 5.15).

(ii) The amount of money received will be treated as collateral for the securities lent/sold/pledged. Since the collateral is cash, the haircut for it would be zero.

(iii) The credit equivalent amount arrived at (i) above, net of amount of cash collateral, will attract a risk weight as applicable to the counterparty.

(iv) As the securities will come back to the books of the borrowing AIFI after the repo period, it will continue to maintain the capital for the credit risk in the securities in the cases where the securities involved in repo are held under HTM category, and capital for market risk in cases where the securities are held under AFS/HFT categories. The capital charge for credit risk / specific risk would be determined according to the credit rating of the issuer of the security. In the case of Government securities, the capital charge for credit / specific risk will be 'zero'.

B. Treatment in the books of the lender of funds:

(i) The amount lent will be treated as on-balance sheet/funded exposure on the counter party, collateralised by the securities accepted under the repo.

(ii) The exposure, being cash, will receive a zero haircut.

(iii) The collateral will be adjusted downwards/marked down as per applicable haircut.

(iv) The amount of exposure reduced by the adjusted amount of collateral, will receive a risk weight as applicable to the counterpart, as it is an on-balance sheet exposure.

(v) The lending AIFI will not maintain any capital charge for the security received by it as collateral during the repo period, since such collateral does not enter its balance sheet but is only held as a bailee.

7.4 Credit Risk Mitigation Techniques – On-Balance Sheet Netting

On-balance sheet netting is confined to loans/advances and deposits, where AIFIs have legally enforceable netting arrangements, involving specific lien with proof of documentation. They may calculate capital requirements on the basis of net credit exposures subject to the following conditions:
Where an AIFI,

(a) has a well-founded legal basis for concluding that the netting or offsetting agreement is enforceable in each relevant jurisdiction regardless of whether the counterparty is insolvent or bankrupt;

(b) is able at any time to determine the loans/advances and deposits with the same counterparty that are subject to the netting agreement;

(c) monitors and controls the relevant exposures on a net basis; and

(d) monitors and controls its roll-off risks.

it may use the net exposure of loans/advances and deposits as the basis for its capital adequacy calculation in accordance with the formula in paragraph 7.3.6. Loans/advances are treated as exposure and deposits as collateral. The haircuts will be zero except when a currency mismatch exists. All the requirements contained in paragraph 7.3.6 and 7.6 will also apply.

7.5 Credit Risk Mitigation Techniques - Guarantees

7.5.1 Where guarantees are direct, explicit, irrevocable and unconditional AIFIs may take account of such credit protection in calculating capital requirements.

7.5.2 A range of guarantors are recognised. Only guarantees issued by entities with a lower risk weight than the counterparty will lead to reduced capital charges since the protected portion of the counterparty exposure is assigned the risk weight of the guarantor, whereas the uncovered portion retains the risk weight of the underlying counterparty.

7.5.3 Detailed operational requirements for guarantees eligible for being treated as a CRM are as under:

7.5.4 Operational requirements for guarantees

(i) A guarantee (counter-guarantee) must represent a direct claim on the protection provider and must be explicitly referenced to specific exposures or a pool of exposures, so that the extent of the cover is clearly defined and incontrovertible. The guarantee must be irrevocable; there must be no clause in the contract that would allow the protection provider unilaterally to cancel the cover or that would increase the effective cost of cover as a result of deteriorating credit quality in the guaranteed exposure. The guarantee must also be unconditional; there should be no clause in the guarantee outside the direct control of the AIFI that could prevent the protection provider from being obliged to pay out in a timely manner in the event that the original counterparty fails to make the payment(s) due.

(ii) All exposures will be risk weighted after taking into account risk mitigation available in the form of guarantees. When a guaranteed exposure is classified as non-performing, the guarantee will cease to be a credit risk mitigant and no adjustment would be permissible on account of credit risk mitigation in the form of guarantees. The entire outstanding, net of specific provision and net of realisable value of eligible collaterals / credit risk mitigants, will attract the appropriate risk weight.

7.5.5 Additional operational requirements for guarantees

In addition to the legal certainty requirements in paragraph 7.2 above, in order for a guarantee to be recognised, the following conditions must be satisfied:

(i) On the qualifying default/non-payment of the counterparty, the AIFI is able in a timely
manner to pursue the guarantor for any monies outstanding under the documentation governing the transaction. The guarantor may make one lump sum payment of all monies under such documentation to the AIFI, or the guarantor may assume the future payment obligations of the counterparty covered by the guarantee. The AIFI must have the right to receive any such payments from the guarantor without first having to take legal actions in order to pursue the counterparty for payment.

(ii) The guarantee is an explicitly documented obligation assumed by the guarantor.

(iii) Except as noted in the following sentence, the guarantee covers all types of payments the underlying obligor is expected to make under the documentation governing the transaction, for example notional amount, margin payments etc. Where a guarantee covers payment of principal only, interests and other uncovered payments should be treated as an unsecured amount in accordance with paragraph 7.5.6

### 7.5.6 Range of Eligible Guarantors (Counter-Guarantors)

Credit protection given by the following entities will be recognised:

(i) Sovereigns, sovereign entities (including BIS, IMF, European Central Bank and European Community as well as those MDBs referred to in paragraph 5.5, ECGC and CGTMSE, CRGFTLIH), banks and primary dealers with a lower risk weight than the counterparty.

(ii) Other entities that are externally rated except when credit protection is provided to a securitisation exposure. This would include credit protection provided by parent, subsidiary and affiliate companies when they have a lower risk weight than the obligor.

(iii) When credit protection is provided to a securitisation exposure, other entities that currently are externally rated BBB- or better and that were externally rated A- or better at the time the credit protection was provided. This would include credit protection provided by parent, subsidiary and affiliate companies when they have a lower risk weight than the obligor.

(iv) In case of securitisation transactions, SPEs cannot be recognised as eligible guarantors.

### 7.5.7 Risk Weights

The protected portion is assigned the risk weight of the protection provider. Exposures covered by State Government guarantees will attract a risk weight of 20 per cent. The uncovered portion of the exposure is assigned the risk weight of the underlying counterparty.

### 7.5.8 Proportional Cover

Where the amount guaranteed, or against which credit protection is held, is less than the amount of the exposure, and the secured and unsecured portions are of equal seniority, i.e. the AIFI and the guarantor share losses on a pro-rata basis capital relief will be afforded on a proportional basis: i.e. the protected portion of the exposure will receive the treatment applicable to eligible guarantees, with the remainder treated as unsecured.

### 7.5.9 Currency Mismatches

Where the credit protection is denominated in a currency different from that in which the exposure is denominated – i.e. there is a currency mismatch – the amount of the exposure deemed to be protected will be reduced by the application of a haircut $H_{FX}$, i.e.,
\[ G_A = G \times (1 - H_{FX}) \]

Where;

- \( G \) = nominal amount of the credit protection
- \( H_{FX} \) = haircut appropriate for currency mismatch between the credit protection and underlying obligation.

AIFIs using the supervisory haircuts will apply a haircut of eight per cent for currency mismatch.

### 7.5.10 Sovereign Guarantees and Counter-Guarantees

A claim may be covered by a guarantee that is indirectly counter-guaranteed by a sovereign. Such a claim may be treated as covered by a sovereign guarantee provided that:

(i) the sovereign counter-guarantee covers all credit risk elements of the claim;

(ii) both the original guarantee and the counter-guarantee meet all operational requirements for guarantees, except that the counter-guarantee need not be direct and explicit to the original claim; and

(iii) the cover should be robust and no historical evidence suggests that the coverage of the counter-guarantee is less than effectively equivalent to that of a direct sovereign guarantee.

### 7.5.11 ECGC Guaranteed Exposures:

Under the Export Credit insurance on Whole Turnover Basis, the guarantee/insurance cover given by ECGC for export credit exposures ranges between 50% and 75% for pre-shipment credit and 50% to 85% in case of post-shipment credit. However, the ECGC’s total liability on account of default by the exporters is capped by an amount specified as Maximum Liability (ML). In this context, it is clarified that risk weight (as given in para 5.2.3 of this Chapter) applicable to the claims on ECGC should be capped to the ML amount specified in the whole turnover policy of the ECGC. The AIFIs are required to proportionately distribute the ECGC maximum liability amount to all individual export credits that are covered by the ECGC Policy. For the covered portion of individual export credits, the AIFIs may apply the risk weight applicable to claims on ECGC. For the remaining portion of individual export credit, the AIFIs may apply the risk weight as per the rating of the counter-party. The Risk Weighted Assets computation can be mathematically represented as under:

| Size of individual export credit exposure i \( A_i \) |
| Size of individual covered export credit exposure i \( B_i \) |
| Sum of individual covered export credit exposures \( \sum B_i \) |

Where:

\( i = 1 \) to \( n \), if total number of exposures is \( n \)

- Maximum Liability Amount \( ML \)
- Risk Weight of counter party for exposure \( i \) \( RW_i \)
- \( RWA \) for ECGC Guaranteed Export Credit:
7.6 Maturity Mismatch

7.6.1 For the purpose of calculating risk-weighted assets, a maturity mismatch occurs when the residual maturity of collateral is less than that of the underlying exposure. Where there is a maturity mismatch and the CRM has an original maturity of less than one year, the CRM is not recognised for capital purposes. In other cases where there is a maturity mismatch, partial recognition is given to the CRM for regulatory capital purposes as detailed below in paragraphs 7.6.2 to 7.6.4. In case of loans collateralised by the AIFI’s own deposits, even if the tenor of such deposits is less than three months or deposits have maturity mismatch vis-à-vis the tenor of the loan, the provisions of paragraph 7.6.1 regarding derecognition of collateral would not be attracted provided an explicit consent of the depositor has been obtained from the depositor (i.e. borrower) for adjusting the maturity proceeds of such deposits against the outstanding loan or for renewal of such deposits till the full repayment of the underlying loan.

7.6.2 Definition of Maturity

The maturity of the underlying exposure and the maturity of the collateral should both be defined conservatively. The effective maturity of the underlying should be gauged as the longest possible remaining time before the counterparty is scheduled to fulfil its obligation, taking into account any applicable grace period. For the collateral, embedded options which may reduce the term of the collateral should be taken into account so that the shortest possible effective maturity is used. The maturity relevant here is the residual maturity.

7.6.3 Risk Weights for Maturity Mismatches

As outlined in paragraph 7.6.1, collateral with maturity mismatches are only recognised when their original maturities are greater than or equal to one year. As a result, the maturity of collateral for exposures with original maturities of less than one year must be matched to be recognised. In all cases, collateral with maturity mismatches will no longer be recognised when they have a residual maturity of three months or less.

7.6.4 When there is a maturity mismatch with recognised credit risk mitigants (collateral, on-balance sheet netting and guarantees) the following adjustment will be applied:

\[ Pa = P \times (t - 0.25) \div (T - 0.25) \]

where:

- \( Pa \) = value of the credit protection adjusted for maturity mismatch
- \( P \) = credit protection (e.g. collateral amount, guarantee amount) adjusted for any haircuts
- \( t \) = \( \min (T, \text{residual maturity of the credit protection arrangement}) \) expressed in years
- \( T \) = \( \min (5, \text{residual maturity of the exposure}) \) expressed in years

7.7 Treatment of pools of CRM Techniques

In the case where a AIFI has multiple CRM techniques covering a single exposure (e.g. an AIFI has both collateral and guarantee partially covering an exposure), the AIFI will be required to subdivide the exposure into portions covered by each type of CRM technique (e.g. portion covered by collateral, portion covered by guarantee) and the risk-weighted
assets of each portion must be calculated separately. When credit protection provided by a single protection provider has differing maturities, they must be subdivided into separate protection as well.

8. Capital Charge for Market Risk

8.1 Introduction

Market risk is defined as the risk of losses in on-balance sheet and off-balance sheet positions arising from movements in market prices. The market risk positions subject to capital charge requirement are:

(i) The risks pertaining to interest rate related instruments and equities in the trading book; and

(ii) Foreign exchange risk (including open position in precious metals) throughout the AIFI (both banking and trading books).

8.2 Scope and Coverage of Capital Charge for Market Risks

8.2.1 These guidelines seek to address the issues involved in computing capital charges for interest rate related instruments in the trading book, equities in the trading book and foreign exchange risk (including gold and other precious metals) in both trading and banking books. Trading book for the purpose of capital adequacy will include:

(i) Securities included under the Held for Trading category
(ii) Securities included under the Available for Sale category
(iii) Open gold position limits
(iv) Open foreign exchange position limits
(v) Trading positions in derivatives, and
(vi) Derivatives entered into for hedging trading book exposures.

8.2.2 AIFIs are required to manage the market risks in their books on an ongoing basis and ensure that the capital requirements for market risks are being maintained on a continuous basis, i.e. at the close of each business day. AIFIs are also required to maintain strict risk management systems to monitor and control intra-day exposures to market risks.

8.2.3 Capital for market risk would not be relevant for securities, which have already matured and remain unpaid. These securities will attract capital only for credit risk. On completion of 90 days delinquency, these will be treated on par with NPAs for deciding the appropriate risk weights for credit risk.

8.3 Measurement of Capital Charge for Interest Rate Risk

8.3.1 This section describes the framework for measuring the risk of holding or taking positions in debt securities and other interest rate related instruments in the trading book.

8.3.2 The capital charge for interest rate related instruments would apply to current market value of these items in AIFI's trading book. Since it is necessary to maintain capital for market risks on an ongoing basis, the trading position should be marked to market on a daily basis. The current market value will be determined as per extant RBI guidelines on valuation of investments.

8.3.3 The minimum capital requirement is expressed in terms of two separately calculated charges, (i) "specific risk" charge for each security, which is designed to protect against an adverse movement in the price of an individual security owing to factors related to the individual issuer, both for short (short position is not allowed in India except in derivatives and Central Government Securities) and long positions, and (ii) "general market risk" charge towards interest rate risk in the portfolio, where long and short positions (which is not
allowed in India except in derivatives and Central Government Securities) in different securities or instruments can be offset.

8.3.4 For the debt securities held under AFS category, in view of the possible longer holding period and attendant higher specific risk, the AIFIs shall hold total capital charge for market risk equal to greater of (a) or (b) below:

(a) Specific risk capital charge, computed notionally for the AFS securities treating them as held under HFT category (as computed according to Table 16: Part A / C / E(i) / F / G / H, as applicable) plus the General Market Risk Capital Charge.

(b) Alternative total capital charge for the AFS category computed notionally treating them as held in the banking book (as computed in accordance with Table 16: Part B / D / E(ii) / F / G / I, as applicable)

A. Specific Risk

8.3.5 (A) The capital charge for specific risk is designed to protect against an adverse movement in the price of an individual security owing to factors related to the individual issuer. The specific risk charges for various kinds of exposures would be applied as detailed below:

<table>

8.3.5 (B) Investment in Debt Mutual Fund/ETF

a) Investment in debt mutual fund/ETF for which full constituent debt details are available shall attract general market risk charge of 9 per cent, as hitherto. Specific risk capital charge for various kinds of exposures would be applied as detailed below:
b) In case of debt mutual fund/ETF which contains a mix of the above debt instruments, the specific risk capital charge shall be computed based on the lowest rated debt instrument/instrument attracting the highest specific risk capital charge in the fund.

c) Debt mutual fund/ETF for which constituent debt details are not available, at least as of each month-end, shall continue to be treated on par with equity for computation of capital charge for market risk as prescribed in para 8.4.1.

# refer to para 8.4.4 below for specific risk capital charge on equity instruments.

**Notes:**

(i) In case of banks where no capital adequacy norms have been prescribed by the RBI, the lending / investing AIFI may calculate the applicable Common Equity Tier 1 and capital conservation buffer of the bank concerned, notionally, by obtaining necessary information from the investee bank and using the capital adequacy norms as applicable to the commercial banks. In case, it is not found feasible to compute applicable Common Equity Tier 1 and capital conservation buffer on such notional basis, the specific risk capital charge of 31.5% or 56.25 %, as per the risk perception of the investing AIFI, should be applied uniformly to the investing AIFI’s entire exposure.

(ii) In case of banks where capital adequacy norms are not applicable at present, the matter of investments in their capital-eligible instruments would not arise for now. However, this Table above will become applicable to them, if in future they issue any capital instruments where AIFIs are eligible to invest.

(iii) The existing specific risk capital charges up to 9% have been scaled up to reflect the application of specific risk charge corresponding to risk weight of 125% instead of 100%. For instance, the existing specific risk charge for exposure to capital instrument issued by scheduled banks with applicable Common Equity Tier 1 and capital conservation buffer more than 9% and instrument having a residual maturity of less than 6 month is 1.4%. This is scaled up as under:

\[ 1.4 \times 125\% = 1.75 \]
## Table 16 - Part D: Alternative Total Capital Charge for bonds issued by banks

8.3.6 AIFIs shall, in addition to computing the counterparty credit risk (CCR) charge for OTC derivatives, as part of capital for credit risk as per the Standardised Approach covered in paragraph 5 above, also compute the specific risk charge for OTC derivatives in the trading book as required in terms of Annex 8.

B. General Market Risk

8.3.7 The capital requirements for general market risk are designed to capture the risk of loss arising from changes in market interest rates. The capital charge is the sum of four components:
the net short (short position is not allowed in India except in derivatives and Central Government Securities) or long position in the whole trading book;

(ii) a small proportion of the matched positions in each time-band (the “vertical disallowance”);

(iii) a larger proportion of the matched positions across different time-bands (the “horizontal disallowance”), and

(iv) a net charge for positions in options, where appropriate.

8.3.8 Separate maturity ladders should be used for each currency and capital charges should be calculated for each currency separately and then summed with no offsetting between positions of opposite sign. In the case of those currencies in which business is insignificant (where the turnover in the respective currency is less than 5 per cent of overall foreign exchange turnover), separate calculations for each currency are not required. The AIFI may, instead, slot within each appropriate time-band, the net long or short position for each currency. However, these individual net positions are to be summed within each time-band, irrespective of whether they are long or short positions, to produce a gross position figure. The gross positions in each time-band will be subject to the assumed change in yield set out in Table-18 with no further offsets.

8.3.9 The Basel Committee has suggested two broad methodologies for computation of capital charge for market risks. One is the standardised method and the other is the internal risk management models method. To start with, AIFIs may adopt the standardised method. Under the standardised method there are two principal methods of measuring market risk, a “maturity” method and a “duration” method. As “duration” method is a more accurate method of measuring interest rate risk, it has been decided to adopt standardised duration method to arrive at the capital charge. Accordingly, AIFIs are required to measure the general market risk charge by calculating the price sensitivity (modified duration) of each position separately. Under this method, the mechanics are as follows:

(i) first calculate the price sensitivity (modified duration) of each instrument;

(ii) next apply the assumed change in yield to the modified duration of each instrument between 0.6 and 1.0 percentage points depending on the maturity of the instrument (see Table 17);

(iii) slot the resulting capital charge measures into a maturity ladder with the fifteen time bands as set out in Table 17;

(iv) subject long and short positions (short position is not allowed in India except in derivatives and Central Government Securities) in each time band to a 5 per cent vertical disallowance designed to capture basis risk; and

(v) carry forward the net positions in each time-band for horizontal offsetting subject to the disallowances set out in Table 18.

Table 17 - Duration Method – Time Bands and Assumed changes in Yield

<table>
<thead>
<tr>
<th>Time Bands</th>
<th>Assumed Change in Yield</th>
<th>Time Bands</th>
<th>Assumed Change in Yield</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zone 1</td>
<td></td>
<td>Zone 3</td>
<td></td>
</tr>
<tr>
<td>1 month or less</td>
<td>1.00</td>
<td>3.6 to 4.3 years</td>
<td>0.75</td>
</tr>
<tr>
<td>1 to 3 months</td>
<td>1.00</td>
<td>4.3 to 5.7 years</td>
<td>0.70</td>
</tr>
<tr>
<td>3 to 6 months</td>
<td>1.00</td>
<td>5.7 to 7.3 years</td>
<td>0.65</td>
</tr>
</tbody>
</table>
8.3.10 The measurement system should include all interest rate derivatives and off balance-sheet instruments in the trading book which react to changes in interest rates, (e.g. forward rate agreements (FRAs), other forward contracts, bond futures, interest rate and cross-currency swaps and forward foreign exchange positions). Options can be treated in a variety of ways as described in Annex 8.

8.4 Measurement of Capital Charge for Equity Risk

8.4.1 The capital charge for equities would apply on their current market value in AIFI's trading book. Minimum capital requirement to cover the risk of holding or taking positions in equities in the trading book is set out below. This is applied to all instruments that exhibit market behaviour similar to equities but not to non-convertible preference shares (which are covered by the interest rate risk requirements described earlier). The instruments covered include equity shares, whether voting or non-voting, convertible securities that behave like equities, for example: units of mutual funds, and commitments to buy or sell equity.

Specific and General Market Risk

8.4.2 Capital charge for specific risk (akin to credit risk) will be 11.25 per cent or capital charge in accordance with the risk warranted by external rating (or lack of it) of the counterparty, whichever is higher and specific risk is computed on AIFI's gross equity positions (i.e. the sum of all long equity positions and of all short equity positions - short equity position is, however, not allowed for AIFI's). In addition, the general market risk charge will also be 9 per cent on the gross equity positions. These capital charges will also be applicable to all trading book exposures, which are exempted from capital market exposure ceilings for direct investments.
8.4.3 Specific Risk Capital Charge for investment in Security Receipts will be 13.5 per cent (equivalent to 150 per cent risk weight). Since the Security Receipts are by and large illiquid and not traded in the secondary market, there will be no General Market Risk Capital Charge on them.

8.4.4 The specific risk charge for AIFI’s investments in the equity of other banks / other financial entities / non-financial entities will be as under:

Table 19 – Part A: Specific risk charge for AIFI’s investments in the equity of banks held in HFT and AFS portfolios

<td>which are more than 10% of the equity capital of investee companies or which are affiliates of the AIFI (these exposures need not attract general market risk charge)</td>
</tr>
<tr>
<td>Specific risk charge (%)</td>
<td>11.25</td>
</tr>
</tbody>
</table>

8.5 Measurement of Capital Charge for Foreign Exchange Risk

The AIFI’s net open position in each currency should be calculated by summing:

- The net spot position (i.e. all asset items less all liability items, including accrued interest, denominated in the currency in question);
- 91 -

- The net forward position (i.e. all amounts to be received less all amounts to be paid under forward foreign exchange transactions, including currency futures and the principal on currency swaps not included in the spot position);

- Guarantees (and similar instruments) that are certain to be called and are likely to be irrecoverable;

- Net future income/expenses not yet accrued but already fully hedged (at the discretion of the reporting AIFI);

- Depending on particular accounting conventions in different countries, any other item representing a profit or loss in foreign currencies;

- The net delta-based equivalent of the total book of foreign currency options

Foreign exchange open positions and gold open positions are at present risk-weighted at 100 per cent. Thus, capital charge for market risks in foreign exchange and gold open position is 9 per cent. These open positions, limits or actual whichever is higher, would continue to attract capital charge at 9 per cent. This capital charge is in addition to the capital charge for credit risk on the on-balance sheet and off-balance sheet items pertaining to foreign exchange and gold transactions.

8.6 Measurement of Capital Charge for Credit Default Swap (CDS) in the Trading Book

8.6.1 General Market Risk

A credit default swap does not normally create a position for general market risk for either the protection buyer or protection seller. However, the present value of premium payable / receivable is sensitive to changes in the interest rates. In order to measure the interest rate risk in premium receivable / payable, the present value of the premium can be treated as a notional position in Government securities of relevant maturity. These positions will attract appropriate capital charge for general market risk. The protection buyer / seller will treat the present value of the premium payable / receivable equivalent to a short / long notional position in Government securities of relevant maturity.

8.6.2 Specific Risk for Exposure to Reference Entity

A CDS creates a notional long / short position for specific risk in the reference asset / obligation for protection seller / protection buyer. For calculating specific risk capital charge, the notional amount of the CDS and its maturity should be used. The specific risk capital charge for CDS positions will be as per Tables below.

| Table 20: Specific Risk Capital Charges for bought and sold CDS positions in the Trading Book: Exposures to entities other than Commercial Real Estate Companies / NBFC-ND-SI |
|-------------------------------------------------|------------------|---------------------|-------------------|------------------|-------------------|
| Upto 90 days | After 90 days |
| Ratings by the ECAI | Residual Maturity of the instrument | Capital charge | Ratings by the ECAI | Capital charge |
| AAA to BBB | 6 months or less | 0.28 % | AAA | 1.8 % |
| | Greater than 6 months and up to and including 24 months | 1.14% | AA | 2.7% |
| | Exceeding 24 months | 1.80% | A | 4.5% |
| | | | BBB | 9.0% |

# The above table will be applicable for exposures up to 90 days. Capital charge for exposures to Commercial Real Estate Companies / NBFC-ND-SI beyond 90 days shall be taken at 9.0%, regardless of rating of the reference / deliverable obligation.

* These ratings indicate the ratings assigned by Indian rating agencies / ECAIs or foreign rating agencies. In the case of foreign ECAIs, the rating symbols used here correspond to Standard and Poor. The modifiers "+" or "-" have been subsumed within the main category.

8.6.2.1 Specific Risk Capital Charges for Positions Hedged by CDS\(^6\)

(i) AIFIs may fully offset the specific risk capital charges when the values of two legs (i.e. long and short in CDS positions) always move in the opposite direction and broadly to the same extent. This would be the case when the two legs consist of completely identical CDS. In these cases, no specific risk capital requirement applies to both sides of the CDS positions.

(ii) AIFIs may offset 80 per cent of the specific risk capital charges when the value of two legs (i.e. long and short) always moves in the opposite direction but not broadly to the same extent. This would be the case when a long cash position is hedged by a credit default swap and there is an exact match in terms of the reference / deliverable obligation, and the maturity of both the reference / deliverable obligation and the CDS. In addition, key features of the CDS (e.g. 

\(^6\) Please refer to paragraph 6.2 of Annex 6 of these guidelines for details.
credit event definitions, settlement mechanisms) should not cause the price movement of the CDS to materially deviate from the price movements of the cash position. To the extent that the transaction transfers risk, an 80% specific risk offset will be applied to the side of the transaction with the higher capital charge, while the specific risk requirement on the other side will be zero.

(iii) AIFIs may offset partially the specific risk capital charges when the value of the two legs (i.e. long and short) usually moves in the opposite direction. This would be the case in the following situations:

(a) The position is captured in paragraph 8.6.2.1(ii) but there is an asset mismatch between the cash position and the CDS. However, the underlying asset is included in the (reference / deliverable) obligations in the CDS documentation and meets the requirements in paragraph 5.17.1.3(i) above.

(b) The position is captured in paragraph 8.6.2.1(ii) but there is maturity mismatch between credit protection and the underlying asset. However, the underlying asset is included in the (reference / deliverable) obligations in the CDS documentation.

(c) In each of the cases in paragraph (a) and (b) above, rather than applying specific risk capital requirements on each side of the transaction (i.e. the credit protection and the underlying asset), only higher of the two capital requirements will apply.

8.6.2.2 Specific Risk Charge in CDS Positions which are not meant for Hedging

In cases not captured in paragraph 8.6.2.1, a specific risk capital charge will be assessed against both sides of the positions.

8.6.3 Capital Charge for Counterparty Credit Risk

The credit exposure for the purpose of counterparty credit risk on account of CDS transactions in the Trading Book will be calculated according to the Current Exposure Method.

8.6.3.1 Protection Seller

A protection seller will have exposure to the protection buyer only if the fee/premia is outstanding. In such cases, the counterparty credit risk charge for all single name long CDS positions in the Trading Book will be calculated as the sum of the current marked-to-market value of a CDS contract, which is required to be marked-to-market, creates bilateral exposure for the parties to the contract. The mark-to-market value of a CDS contract is the difference between the default-adjusted present value of protection payment (called “protection leg” / “credit leg”) and the present value of premium payable called (“premium leg”). If the value of credit leg is less than the value of the premium leg, then the mark-to-market value for the protection seller in positive. Therefore, the protection seller will have exposure to the counterparty (protection buyer) if the value of premium leg is more than the value of credit leg. In case, no premium is outstanding, the value of premium leg will be zero and the mark-to-market value of the CDS contract will always be negative for the protection seller and therefore, protection seller will not have any exposure to the protection buyer. In no case, the protection seller’s exposure on protection buyer can exceed the amount of the premium unpaid. For the purpose of capital adequacy as well as exposure norms, the measure of counterparty exposures in case of CDS transaction held in Trading Book is the Potential Future Exposure (PFE) which is measured and recognised as per Current Exposure Method.
value, if positive (zero, if marked-to-market value is negative) and the potential future exposure add-on factors based on table given below. However, the add-on will be capped to the amount of unpaid premia.

### Table 22: Add-on Factors for Protection Sellers

<table>

</tr>
</thead>
<tbody>
<tr>
<td>Obligations rated BBB- and above</td>
<td>10%</td>
</tr>
<tr>
<td>Below BBB- and unrated</td>
<td>20%</td>
</tr>
</tbody>
</table>

8.6.3.2 Protection Buyer

A CDS contract creates a counterparty exposure on the protection seller on account of the credit event payment. The counterparty credit risk charge for all short CDS positions in the Trading Book will be calculated as the sum of the current marked-to-market value, if positive (zero, if marked-to-market value is negative) and the potential future exposure add-on factors based on table given below:

### Table 23: Add-on Factors for Protection Buyers

<table>
<thead>

</table>

8.6.3.3 Capital Charge for Counterparty Risk for Collateralised Transactions in CDS

As mentioned in paragraph 3.3 of the circular IDMD.PCD.No.10/14.03.04/2012-13 dated January 7, 2013, collaterals and margins would be maintained by the individual market participants. The counterparty exposure for CDS traded in the OTC market will be calculated as per the Current Exposure Method. Under this method, the calculation of the counterparty credit risk charge for an individual contract, taking into account the collateral, will be as follows:

Counterparty risk capital charge = [(RC + add-on) – CA] x r x 9%

Where;
RC = the replacement cost,
add-on = the amount for potential future exposure calculated according to paragraph 8.6.3 above.
CA = the volatility adjusted amount of eligible collateral under the comprehensive approach prescribed in paragraph 7.3 on "Credit Risk Mitigation Techniques - Collateralised Transactions" of these guidelines, or zero if no eligible collateral is applied to the transaction, and
r = the risk weight of the counterparty.

8.6.4 Treatment of Exposures below Materiality Thresholds of CDS

Materiality thresholds on payments below which no payment is made in the event of loss are equivalent to retained first loss positions and should be assigned risk weight of 1250 per cent for capital adequacy purpose by the protection buyer.

8.7 Aggregation of the capital charge for Market Risks

As explained earlier capital charges for specific risk and general market risk are to be computed separately before aggregation. For computing the total capital charge and Risk Weighted Assets for market risks, the calculations may be plotted in the following table:
<table>
<thead>
<tr>
<th>Risk Category</th>
<th>Capital charge</th>
<th>Risk Weighted Assets (RWA)</th>
</tr>
</thead>

### 8.8 Treatment for Illiquid Positions

#### 8.8.1 Prudent Valuation Guidance

(i) This section provides AIFIs with guidance on prudent valuation for positions that are accounted for at fair value. This guidance would be applicable to all positions enumerated in paragraph 8.2.1 above. It is especially important for positions without actual market prices or observable inputs to valuation, as well as less liquid positions which raise supervisory concerns about prudent valuation. The valuation guidance set forth below is not intended to require AIFIs to change valuation procedures for financial reporting purposes.

(ii) A framework for prudent valuation practices should at a minimum include the following:

#### 8.8.1.1 Systems and Controls:

AIFIs must establish and maintain adequate systems and controls sufficient to give management and supervisors the confidence that their valuation estimates are prudent and reliable. These systems must be integrated with other risk management systems within the organisation (such as credit analysis). Such systems must include:

(i) Documented policies and procedures for the process of valuation. This includes clearly defined responsibilities of the various areas involved in the determination of the valuation, sources of market information and review of their appropriateness, guidelines for the use of unobservable inputs reflecting the AIFI’s assumptions of what market participants would use in pricing the position, frequency of independent valuation, timing of closing prices, procedures for adjusting valuations, end of the month and ad-hoc verification procedures; and

(ii) Clear and independent (i.e. independent of front office) reporting lines for the department accountable for the valuation process.
8.8.1.2 Valuation Methodologies:

Marking to Market

(i) Marking-to-market is at least the daily valuation of positions at readily available close out prices in orderly transactions that are sourced independently. Examples of readily available close out prices include exchange prices, screen prices, or quotes from several independent reputable brokers.

(ii) AIFIs must mark-to-market as much as possible. The more prudent side of bid/offer should be used unless the institution is a significant market maker in a particular position type and it can close out at mid-market. AIFIs should maximise the use of relevant observable inputs and minimise the use of unobservable inputs when estimating fair value using a valuation technique. However, observable inputs or transactions may not be relevant, such as in a forced liquidation or distressed sale, or transactions may not be observable, such as when markets are inactive. In such cases, the observable data should be considered, but may not be determinative.

Marking to Model

(iii) Marking-to-model is defined as any valuation which has to be benchmarked, extrapolated or otherwise calculated from a market input. Where marking-to-market is not possible, AIFIs should follow Reserve Bank’s extant guidelines on valuation of investments. For investment and derivative positions other than those covered in the Reserve Bank’s instructions, the valuation model used by AIFIs must be demonstrated to be prudent. When marking to valuation model other than that prescribed in RBI / FIMMDA guidelines, an extra degree of conservatism is appropriate. RBI will consider the following in assessing whether a mark-to-model valuation is prudent:

- Senior management should be aware of the elements of the trading book or of other fair-valued positions which are subject to mark to model and should understand the materiality of the uncertainty this creates in the reporting of the risk/performance of the business.

- Market inputs should be sourced, to the extent possible, in line with market prices (as discussed above). The appropriateness of the market inputs for the particular position being valued should be reviewed regularly.

- Where available, generally accepted valuation methodologies for particular products should be used as far as possible.

- Where the model is developed by the institution itself, it should be based on appropriate assumptions, which have been assessed and challenged by suitably qualified parties independent of the development process. The model should be developed or approved independently of the front office. It should be independently tested. This includes validating the mathematics, the assumptions and the software implementation.

- There should be formal change control procedures in place and a secure copy of the model should be held and periodically used to check valuations.

- Risk management function/ department should be aware of the weaknesses of the models used and how best to reflect those in the valuation output.

- The model should be subject to periodic review to determine the accuracy of its performance (e.g. assessing continued appropriateness of the assumptions,
analysis of P&L versus risk factors, comparison of actual close out values to model outputs).

• Valuation adjustments should be made as appropriate, for example, to cover the uncertainty of the model valuation (see also valuation adjustments in paragraphs 8.8.1.2 (vi), (vii) and 8.8.2.1 to 8.8.2.4.)

Independent Price Verification

(iv) Independent price verification is distinct from daily mark-to-market. It is the process by which market prices or model inputs are regularly verified for accuracy. While daily marking-to-market may be performed by dealers, verification of market prices or model inputs should be performed by a unit independent of the dealing room, at least monthly (or, depending on the nature of the market/trading activity, more frequently). It need not be performed as frequently as daily mark-to-market, since the objective, i.e. independent, marking of positions should reveal any error or bias in pricing, which should result in the elimination of inaccurate daily marks.

(v) Independent price verification entails a higher standard of accuracy in that the market prices or model inputs are used to determine profit and loss figures, whereas daily marks are used primarily for management reporting in between reporting dates. For independent price verification, where pricing sources are more subjective, e.g. only one available broker quote, prudent measures such as valuation adjustments may be appropriate.

Valuation Adjustments

(vi) As part of their procedures for marking to market, AIFIs must establish and maintain procedures for considering valuation adjustments. RBI would particularly expect AIFIs using third-party valuations to consider whether valuation adjustments are necessary. Such considerations are also necessary when marking to model.

(vii) At a minimum, AIFIs should consider the following valuation adjustments while valuing their derivatives portfolios:

• incurred CVA losses
• closeout costs,
• operational risks,
• early termination, investing and funding costs, and
• future administrative costs and,
• where appropriate, model risk.

AIFIs may follow any recognised method/model to compute the above adjustments except provisions against incurred CVA losses. However, AIFIs may use the following formula to calculate incurred CVA loss on derivatives transactions:

\[ ICVAL_t = \text{Max} \left[ 0, \left( EE_t \cdot RP_t \right) - \left( EE_0 \cdot RP_0 \right) \right] \]

Where;

\[ ICVAL_t = \text{Cumulative Incurred CVA loss at time ‘t’}. \]

64 Provisions against incurred CVA losses are akin to specific provisions required on impaired assets and depreciation in case of investments held in the trading book. These provisions will be in addition to the general provisions @ 0.4% required on the positive MTM values. The provisions against incurred CVA losses may be netted off from the exposure value while calculating capital charge for default risk under the Current Exposure Method as required in terms of paragraph 5.15.3.5 (ii).
\( \text{EE}_t \) = Value of counterparty exposure projected after one year from ‘t’ and
discounted back to ‘t’ using CEM and a risk free discount rate for one year
\( \text{EE}_0 \) = Counterparty exposure estimated at time ‘0’ using CEM

\( \text{RP}_t \) = Credit spread of the counterparty as reflected in the CDS or bond prices.

In cases where market based credit spreads are not available, risk premium
applicable to the counterparty according to its credit grade as per the internal credit
rating system of the AIFI used for pricing/loan approval purposes at time ‘t’ may be
used.

\( \text{RP}_0 \) = Credit spread of the counterparty as reflected in the CDS or bond prices.

In cases where market based credit spreads are not available, risk premium
applicable to the counterparty according to its credit grade as per the internal credit
rating system of the AIFI used for pricing / loan approval purposes at time ‘0’ i.e. the
date of the transaction.

**Note:** Some of other terms used above are explained below:

**Close-out costs**
Close-out costs adjustment factors in the cost of eliminating the market risk of the portfolio.

**Investing and Funding costs**
The "investing and funding costs adjustment" relating to the cost of funding and investing
cash flow mismatches at rates different from the rate which models typically assume.

**Administrative costs adjustment**
Administrative costs adjustment relates to the costs that will be incurred to administer the
portfolio.

8.8.2 **Adjustment to the current valuation of less liquid positions for regulatory
capital purposes:**

8.8.2.1 AIFIs must establish and maintain procedures for judging the necessity of and
calculating an adjustment to the current valuation of less liquid positions for regulatory
capital purposes. This adjustment may be in addition to any changes to the value of the
position required for financial reporting purposes and should be designed to reflect the
illiquidity of the position. An adjustment to a position’s valuation to reflect current illiquidity
should be considered whether the position is marked to market using market prices or
observable inputs, third-party valuations or marked to model.

8.8.2.2 Bearing in mind that the assumptions made about liquidity in the market risk capital
charge may not be consistent with the AIFI’s ability to sell or hedge out less liquid positions
where appropriate, AIFIs must take an adjustment to the current valuation of these positions,
and review their continued appropriateness on an on-going basis. Reduced liquidity may
have arisen from market events. Additionally, close-out prices for concentrated positions
and/or stale positions should be considered in establishing the adjustment. RBI has not
prescribed any particular methodology for calculating the amount of valuation adjustment on
account of illiquid positions. AIFIs must consider all relevant factors when determining the
appropriateness of the adjustment for less liquid positions. These factors may include, but
are not limited to, the amount of time it would take to hedge out the position/risks within the
position, the average volatility of bid/offer spreads, the availability of independent market
quotes (number and identity of market makers), the average and volatility of trading volumes
(including trading volumes during periods of market stress), market concentrations, the aging of positions, the extent to which valuation relies on marking-to-model, and the impact of other model risks not included in paragraph 8.8.2.2. The valuation adjustment on account of illiquidity should be considered irrespective of whether the guidelines issued by FIMMDA have taken into account the illiquidity premium or not, while fixing YTM/spreads for the purpose of valuation.

8.8.2.3 For complex products including, but not limited to, securitisation exposures, AIFIs must explicitly assess the need for valuation adjustments to reflect two forms of model risk:

(i) the model risk associated with using a possibly incorrect valuation methodology; and

(ii) the risk associated with using unobservable (and possibly incorrect) calibration parameters in the valuation model.

8.8.2.4 The adjustment to the current valuation of less liquid positions made under paragraph 8.8.2.2 will not be debited to P&L Account, but will be deducted from Common Equity Tier 1 capital while computing CRAR of the AIFI. The adjustment may exceed those valuation adjustments made under financial reporting/accounting standards and paragraphs 8.8.1.2 (vi) and (vii).

8.8.2.5 In calculating the eligible capital for market risk, it will be necessary first to calculate the AIFIs' minimum capital requirement for credit and operational risk and only afterwards its market risk requirement to establish how much components of capital is available to support market risk.

9. Capital Charge for Operational Risk

9.1 Definition of Operational Risk

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This definition includes legal risk, but excludes strategic and reputational risk. Legal risk includes, but is not limited to, exposure to fines, penalties, or punitive damages resulting from supervisory actions, as well as private settlements.

9.2 The Measurement Methodologies

9.2.1 There are three methods for calculating operational risk capital charges in a continuum of increasing sophistication and risk sensitivity: (i) the Basic Indicator Approach (BIA); (ii) the Standardised Approach (TSA); and (iii) Advanced Measurement Approaches (AMA).

9.2.2 The AIFIs shall adopt the Basic Indicator Approach (BIA) for calculating the Operational Risk capital charge.

9.2.3 Reserve Bank will review the capital requirement produced by the Basic Indicator Approach for general credibility and in the event that credibility is lacking, appropriate supervisory action under Pillar 2 will be considered.

9.3 The Basic Indicator Approach

9.3.1 Under the Basic Indicator Approach, AIFIs must hold capital for operational risk equal to the average over the previous three years of a fixed percentage (denoted as alpha) of positive annual gross income. Figures for any year in which annual gross income is negative or zero should be excluded from both the numerator and denominator when calculating the average. If negative gross income distorts an AIFI's Pillar 1 capital charge, Reserve Bank will consider appropriate supervisory action under Pillar 2. The charge may be expressed as follows:
Where:

\[ KBIA = \left[ \sum (GI_{1..n} \times \alpha) \right] / n \]

- **KBIA** = the capital charge under the Basic Indicator Approach
- **GI** = annual gross income, where positive, over the previous three years
- **n** = number of the previous three years for which gross income is positive
- **\(\alpha\)** = 15 per cent, which is set by the BCBS, relating the industry wide level of required capital to the industry wide level of the indicator.

### 9.3.2 Gross income

Gross income is defined as “Net interest income” plus “net non-interest income”. It is intended that this measure should:

1. be gross of any provisions (e.g. for unpaid interest) and write-offs made during the year;
2. be gross of operating expenses, including fees paid to outsourcing service providers, in addition to fees paid for services that are outsourced, fees received by AIFIs that provide outsourcing services shall be included in the definition of gross income;
3. exclude reversal during the year in respect of provisions and write-offs made during the previous year(s);
4. exclude income recognised from the disposal of items of movable and immovable property;
5. exclude realised profits/losses from the sale of securities in the “held to maturity” category;
6. exclude income from legal settlements in favour of the AIFI;
7. exclude other extraordinary or irregular items of income and expenditure; and
8. exclude income derived from insurance activities (i.e. income derived by writing insurance policies) and insurance claims in favour of the AIFI.

### 9.3.3 AIFIs

AIFIs are advised to compute capital charge for operational risk under the Basic Indicator Approach as follows:

1. Average of \([\text{Gross Income} \times \alpha]\) for each of the last three financial years, excluding years of negative or zero gross income
2. \(\text{Gross income} = \text{Net profit} + \text{Provisions & contingencies} + \text{operating expenses (Schedule 16)} - \text{items (iii) to (viii) of paragraph 9.3.2.}\)
3. \(\alpha = 15\) per cent

### 9.3.4 As a point of entry for capital calculation, no specific criteria for use of the Basic Indicator Approach are set out in these guidelines. Nevertheless, AIFIs using this approach are encouraged to comply with the Basel Committee’s guidance on ‘Sound Practices for the Management and Supervision of Operational Risk’ dated February 25, 2003 and the risk management guidelines prescribed for AIFIs.

### 9.3.5 Once the AIFI has calculated the capital charge for operational risk under BIA, it has to multiply this with 12.5 and arrive at the notional risk weighted asset (RWA) for operational risk.
Part B: Supervisory Review and Evaluation Process (SREP)

10. Introduction to the SREP under Pillar 2

10.1 The Capital Adequacy Framework rests on three components or three Pillars. Pillar 1 is the Minimum Capital Ratio while Pillar 2 and Pillar 3 are the Supervisory Review Process (SRP) and Market Discipline, respectively. The guidelines in regard to the SRP and the ICAAP are furnished in this Section. An illustrative outline of the format of the ICAAP document, to be submitted to the RBI, by AIFIs, is furnished at Annex 13.

10.2 The objective of the SRP is to ensure that AIFIs have adequate capital to support all the risks in their business as also to encourage them to develop and use better risk management techniques for monitoring and managing their risks. This in turn would require a well-defined internal assessment process within AIFIs through which they assure the RBI that adequate capital is indeed held towards the various risks to which they are exposed. The process of assurance could also involve an active dialogue between the AIFI and the RBI so that, when warranted, appropriate intervention could be made to either reduce the risk exposure of the AIFI or augment / restore its capital. Thus, ICAAP is an important component of the SRP.

10.3 The main aspects to be addressed under the SRP, and therefore, under the ICAAP, would include:

(a) the risks that are not fully captured by the minimum capital ratio prescribed under Pillar 1;

(b) the risks that are not at all taken into account by the Pillar 1; and

(c) the factors external to the AIFI.

Since the capital adequacy ratio prescribed by the RBI under the Pillar 1 of the Framework is only the regulatory minimum level, addressing only the three specified risks (viz., credit, market and operational risks), holding additional capital might be necessary for AIFIs, on account of both – the possibility of some under-estimation of risks under the Pillar 1 and the actual risk exposure of an AIFI vis-à-vis the quality of its risk management architecture. Illustratively, some of the risks that the AIFIs are generally exposed to but which are not captured or not fully captured in the regulatory CRAR would include:

(a) Interest rate risk in the banking book;

(b) Credit concentration risk;

(c) Liquidity risk;

(d) Settlement risk;

(e) Reputational risk;

(f) Strategic risk;

(g) Risk of under-estimation of credit risk under the Standardised approach;

(h) Model risk i.e., the risk of under-estimation of credit risk under the IRB approaches;

(i) Risk of weakness in the credit-risk mitigants;

(j) Residual risk of securitisation, etc.

The quantification of currency induced credit risk will form a part of AIFIs’ Internal Capital Adequacy Assessment Programme (ICAAP) and AIFIs are expected to address this risk in a comprehensive manner. The ICAAP should measure the extent of currency induced credit risk65 the AIFI is exposed to and also concentration of such exposures. AIFIs may also like to

---

perform stress tests under various extreme but plausible exchange rate scenarios under ICAAP. Outcome of ICAAP may lead an AIFI to take appropriate risk management actions like risk reduction, maintenance of more capital or provision, etc.

It is, therefore, only appropriate that the AIFIs make their own assessment of their various risk exposures, through a well-defined internal process, and maintain an adequate capital cushion for such risks.

10.5 It is recognised that there is no one single approach for conducting the ICAAP and the market consensus in regard to the best practice for undertaking ICAAP is yet to emerge. The methodologies and techniques are still evolving particularly in regard to measurement of non-quantifiable risks, such as reputational and strategic risks. These guidelines, therefore, seek to provide only broad principles to be followed by AIFIs in developing their ICAAP.

10.6 AIFIs are advised to develop and put in place, with the approval of their Boards, an ICAAP commensurate with their size, level of complexity, risk profile and scope of operations.

10.7 The ICAAP document should, inter alia, include the capital adequacy assessment and projections of capital requirement for the ensuing year, along with the plans and strategies for meeting the capital requirement. An illustrative outline of a format of the ICAAP document is furnished at Annex 13, for guidance of the AIFIs though the ICAAP documents of the AIFIs could vary in length and format, in tune with their size, level of complexity, risk profile and scope of operations.

11. Need for Improved Risk Management

11.1 While financial institutions have faced difficulties over the years for a multitude of reasons, the major causes of serious banking problems continue to be lax credit standards for borrowers and counterparties, poor portfolio risk management, and a lack of attention to changes in economic or other circumstances that can lead to a deterioration in the credit standing of an AIFI's counterparties.

11.2 The financial market crisis of 2007-08 has underscored the critical importance of effective credit risk management to the long-term success of any financial institution and as a key component of financial stability. It has provided a stark reminder of the need for AIFIs to effectively identify, measure, monitor and control credit risk, as well as to understand how credit risk interacts with other types of risk (including market, liquidity and reputational risk). The essential elements of a comprehensive credit risk management programme include (i) establishing an appropriate credit risk environment; (ii) operating under a sound credit granting process; (iii) maintaining an appropriate credit administration, measurement and monitoring process; and (iv) ensuring adequate controls over credit risk as elaborated in the risk management guidelines prescribed for AIFIs.

11.3 The recent crisis has emphasised the importance of effective capital planning and longer-term capital maintenance. An AIFI's ability to withstand uncertain market conditions is bolstered by maintaining a strong capital position that accounts for potential changes in the AIFI's strategy and volatility in market conditions over time. AIFIs should focus on effective and efficient capital planning, as well as long-term capital maintenance. An effective capital planning process requires an AIFI to assess both the risks to which it is exposed and the risk management processes in place to manage and mitigate those risks; evaluate its capital adequacy relative to its risks; and consider the potential impact on earnings and capital from economic downturns. An AIFI's capital planning process should incorporate rigorous, forward looking stress testing, as discussed below in paragraph 12.9.
12. **Guidelines for the SREP of the RBI and the ICAAP of AIFIs**

12.1 **Background**

12.1.1 The Basel capital adequacy framework rests on the following three mutually-reinforcing pillars:

Pillar 1: Minimum Capital Requirements - which prescribes a risk-sensitive calculation of capital requirements that, for the first time, explicitly includes operational risk in addition to market and credit risk.

Pillar 2: Supervisory Review Process (SRP) - which envisages the establishment of suitable risk management systems in AIFIs and their review by the supervisory authority.

Pillar 3: Market Discipline - which seeks to achieve increased transparency through expanded disclosure requirements for AIFIs.

12.1.2 Following are the four key principles in regard to the SRP envisaged under Pillar 2:

**Principle 1:** AIFIs should have a process for assessing their overall capital adequacy in relation to their risk profile and a strategy for maintaining their capital levels.

**Principle 2:** Supervisors should review and evaluate AIFIs’ internal capital adequacy assessments and strategies, as well as their ability to monitor and ensure their compliance with the regulatory capital ratios. Supervisors should take appropriate supervisory action if they are not satisfied with the result of this process.

**Principle 3:** Supervisors should expect AIFIs to operate above the minimum regulatory capital ratios and should have the ability to require AIFIs to hold capital in excess of the minimum.

**Principle 4:** Supervisors should seek to intervene at an early stage to prevent capital from falling below the minimum levels required to support the risk characteristics of a particular AIFI and should require rapid remedial action if capital is not maintained or restored.

12.1.3 It would be seen that the principles 1 and 3 relate to the supervisory expectations from AIFIs while the principles 2 and 4 deal with the role of the supervisors under Pillar 2. Pillar 2 (Supervisory Review Process - SRP) requires AIFIs to implement an internal process, called the Internal Capital Adequacy Assessment Process (ICAAP), for assessing their capital adequacy in relation to their risk profiles as well as a strategy for maintaining their capital levels. Pillar 2 also requires the supervisory authorities to subject all AIFIs to an evaluation process, hereafter called Supervisory Review and Evaluation Process (SREP), and to initiate such supervisory measures on that basis, as might be considered necessary. An analysis of the foregoing principles indicates that the following broad responsibilities have been cast on AIFIs and the supervisors:

**AIFIs' responsibilities:**

(a) AIFIs should have in place a process for assessing their overall capital adequacy in relation to their risk profile and a strategy for maintaining their capital levels (Principle 1)

(b) AIFIs should operate above the minimum regulatory capital ratios (Principle 3)
Supervisors’ responsibilities

(a) Supervisors should review and evaluate an AIFI’s ICAAP. (Principle 2)

(b) Supervisors should take appropriate action if they are not satisfied with the results of this process. (Principle 2)

(c) Supervisors should review and evaluate an AIFI’s compliance with the regulatory capital ratios. (Principle 2)

(d) Supervisors should have the ability to require AIFIs to hold capital in excess of the minimum. (Principle 3)

(e) Supervisors should seek to intervene at an early stage to prevent capital from falling below the minimum levels. (Principle 4)

(f) Supervisors should require rapid remedial action if capital is not maintained or restored. (Principle 4)

12.1.4 Thus, the ICAAP and SREP are the two important components of Pillar 2 and could be broadly defined as follows:

The ICAAP comprises an AIFI’s procedures and measures designed to ensure the following:

(a) An appropriate identification and measurement of risks;

(b) An appropriate level of internal capital in relation to the AIFI’s risk profile; and

(c) Application and further development of suitable risk management systems in the AIFI.

The SREP consists of a review and evaluation process adopted by the supervisor, which covers all the processes and measures defined in the principles listed above. Essentially, these include the review and evaluation of the AIFI’s ICAAP, conducting an independent assessment of the AIFI’s risk profile, and if necessary, taking appropriate prudential measures and other supervisory actions.

12.1.5 These guidelines seek to provide broad guidance to AIFIs by outlining the manner in which the SREP would be carried out by the RBI, the expected scope and design of their ICAAP, and the expectations of the RBI from AIFIs in regard to implementation of the ICAAP.

12.2 Conduct of the SREP by the RBI

12.2.1 Capital helps protect individual financial entities, such as banks and AIFIs from insolvency, thereby promoting safety and soundness in the overall financial system. Minimum regulatory capital requirements under Pillar 1 establish a threshold below which a sound AIFI’s regulatory capital must not fall. Regulatory capital ratios permit some comparative analysis of capital adequacy across regulated entities because they are based on certain common methodology / assumptions. However, supervisors need to perform a more comprehensive assessment of capital adequacy that considers risks specific to an AIFI, conducting analyses that go beyond minimum regulatory capital requirements.

12.2.2 The RBI expects AIFIs to hold capital above their minimum regulatory capital levels, commensurate with their individual risk profiles, to account for all material risks. Under the SREP, the RBI will assess the overall capital adequacy of an AIFI through a comprehensive evaluation that takes into account all relevant available information. In determining the extent to which AIFIs should hold capital in excess of the regulatory
minimum, the RBI would take into account the combined implications of an AIFI’s compliance with regulatory minimum capital requirements, the quality and results of an AIFI’s ICAAP, and supervisory assessment of the AIFI’s risk management processes, control systems and other relevant information relating to the AIFI’s risk profile and capital position.

12.2.3 The SREP of AIFIs would, thus, be conducted by the RBI periodically, generally, along with the RBI’s Biennial Financial Inspection (BFI) of AIFIs and in the light of the data in the off-site returns received from AIFIs in the RBI, in conjunction with the ICAAP document, which is required to be submitted every year by AIFIs to the RBI (refer to paragraph 12.3.3.7 below). Through the SREP, the RBI would evaluate the adequacy and efficacy of the ICAAP of AIFIs and the capital requirements derived by them therefrom. While in the course of evaluation, there would be no attempt to reconcile the difference between the regulatory minimum CRAR and the outcome of the ICAAP of an AIFI (as the risks covered under the two processes are different), AIFIs would be expected to demonstrate to the RBI that the ICAAP adopted by them is fully responsive to their size, level of complexity, scope and scale of operations and the resultant risk profile / exposures, and adequately captures their capital requirements. Such an evaluation of the effectiveness of the ICAAP would help the RBI in understanding the capital management processes and strategies adopted by AIFIs. If considered necessary, the SREP could also involve a dialogue between the AIFI’s top management and the RBI from time to time. In addition to the periodic reviews, independent external experts may also be commissioned by the RBI, if deemed necessary, to perform ad hoc reviews and comment on specific aspects of the ICAAP process of an AIFI; the nature and extent of such a review shall be determined by the RBI.

12.2.4 Pillar 1 capital requirements will include a buffer for uncertainties surrounding the Pillar 1 regime that affect the banking population as a whole. AIFI-specific uncertainties will be treated under Pillar 2. It is anticipated that such buffers under Pillar 1 will be set to provide reasonable assurance that an AIFI with good internal systems and controls, a well-diversified risk profile and a business profile well covered by the Pillar 1 regime, and which operates with capital equal to Pillar 1 requirements, will meet the minimum goals for soundness embodied in Pillar 1. However, RBI may require particular AIFIs to operate with a buffer, over and above the Pillar 1 standard. AIFIs should maintain this buffer for a combination of the following:

(a) Pillar 1 minimums are anticipated to be set to achieve a level of AIFI creditworthiness in markets that is below the level of creditworthiness sought by many AIFIs for their own reasons. For example, most international financial institutions appear to prefer to be highly rated by internationally recognised rating agencies. Thus, AIFIs are likely to choose to operate above Pillar 1 minimums for competitive reasons.

(b) In the normal course of business, the type and volume of activities will change, as will the different risk exposures, causing fluctuations in the overall capital ratio.

(c) It may be costly for AIFIs to raise additional capital, especially if this needs to be done quickly or at a time when market conditions are unfavourable.

(d) For AIFIs to fall below minimum regulatory capital requirements is a serious matter. It may place AIFIs in breach of the provisions of the RBI regulations and / or attract corrective action on the part of RBI.

(e) There may be risks, either specific to individual AIFIs, or more generally to the

---

As a part of SREP under Pillar 2, RBI may review the risk management measures taken by the AIFI and its adequacy to manage currency induced credit risk\(^{68}\), especially if exposure to such risks is assessed to be on higher side.

Under the SREP, the RBI would make an assessment as to whether the AIFI maintains adequate capital cushion to take care of the above situations. Such a cushion should be in addition to the capital conservation buffer and countercyclical capital buffer, if any, required to be maintained by the AIFI according to the applicable guidelines. Such cushion would generally be reflected in more than minimum capital adequacy ratio maintained by the AIFI after taking into account capital conservation buffer and countercyclical capital buffer.

Under the SREP, RBI would also seek to determine whether an AIFI’s overall capital remains adequate as the underlying conditions change. Generally, material increases in risk that are not otherwise mitigated should be accompanied by commensurate increases in capital. Conversely, reductions in overall capital (to a level still above regulatory minima) may be appropriate if the RBI’s supervisory assessment leads it to a conclusion that risk has materially declined or that it has been appropriately mitigated. Based on such assessment, the RBI could consider initiating appropriate supervisory measures to address its supervisory concerns. The measures could include requiring a modification or enhancement of the risk management and internal control processes of an AIFI, a reduction in risk exposures, or any other action as deemed necessary to address the identified supervisory concerns. These measures could also include the stipulation of an AIFI-specific additional capital requirement over and above what has been determined under Pillar 1.

12.2.5 As and when the advanced approaches envisaged in the Basel capital adequacy framework are permitted to be adopted in India, the SREP would also assess the ongoing compliance by AIFIs with the eligibility criteria for adopting the advanced approaches.

12.3 The Structural Aspects of the ICAAP

12.3.1 This section outlines the broad parameters of the ICAAP that AIFIs are required to comply with in designing and implementing their ICAAP.

12.3.2 Every AIFI to have an ICAAP

The ICAAP should be prepared, on a solo basis, at every tier for each entity within the group, as also at the level of the consolidated AIFI (i.e., a group of entities where the AIFI is the controlling entity).

12.3.3 ICAAP to encompass institution-wide risk profile

12.3.3.1 General firm-wide risk management principles:

Senior management should understand the importance of taking an integrated, firm-wide perspective of an AIFI’s risk exposure, in order to support its ability to identify and react to emerging and growing risks in a timely and effective manner. The purpose of this guidance is the need to enhance firm-wide oversight, risk management and controls around AIFIs’ capital markets activities, including securitisation, off-balance sheet exposures, structured

\(^{67}\) If an AIFI has identified some capital add-on to take care of an identified Pillar 2 risk or inadequately capitalised Pillar 1 risk, that add-on can be translated into risk weighted assets as indicated in this paragraph below, which should be added to the total risk weighted assets of the AIFI. No additional Pillar 2 buffer need be maintained for such identified risks.

\(^{68}\) Please refer to circular DBOD No.BP BC.85/21.06.200/2013-14 and DBOD No.BP BC.116/21.06.200/2013-14 dated January 15, 2014 and June 3, 2014 addressed to banks, respectively.
credit and complex trading activities.

A sound risk management system should have the following key features:

- Active Board and senior management oversight;
- Appropriate policies, procedures and limits;
- Comprehensive and timely identification, measurement, mitigation, controlling, monitoring and reporting of risks;
- Appropriate management information systems (MIS) at the business and firm-wide level; and
- Comprehensive internal controls.

12.3.3.2 Board and Senior Management Oversight:

The ultimate responsibility for designing and implementation of the ICAAP lies with the AIFI's Board. It is the responsibility of the Board and senior management to define the institution’s risk appetite and to ensure that the AIFI’s risk management framework includes detailed policies that set specific firm-wide prudential limits on the AIFI’s activities, which are consistent with its risk taking appetite and capacity. In order to determine the overall risk appetite, the Board and senior management must first have an understanding of risk exposures on a firm-wide basis. To achieve this understanding, the appropriate members of senior management must bring together the perspectives of the key business and control functions. In order to develop an integrated institution-wide perspective on risk, senior management must overcome organisational silos between business lines and share information on market developments, risks and risk mitigation techniques. Senior management should establish a risk management process that is not limited to credit, market, liquidity and operational risks, but incorporates all material risks. This includes reputational, legal and strategic risks, as well as risks that do not appear to be significant in isolation, but when combined with other risks could lead to material losses.

12.3.3.3 The Board and senior management should possess sufficient knowledge of all major business lines to ensure that appropriate policies, controls and risk monitoring systems are effective. They should have the necessary expertise to understand the capital markets activities in which the AIFI is involved – such as securitisation and off-balance sheet activities – and the associated risks. The Board and senior management should remain informed on an on-going basis about these risks as financial markets, risk management practices and the AIFI's activities evolve. In addition, the Board and senior management should ensure that accountability and lines of authority are clearly delineated. With respect to new or complex products and activities, senior management should understand the underlying assumptions regarding business models, valuation and risk management practices. In addition, senior management should evaluate the potential risk exposure if those assumptions fail. Before embarking on new activities or introducing products new to the institution, the Board and senior management should identify and review the changes in firm-wide risks arising from these potential new products or activities and ensure that the infrastructure and internal controls necessary to manage the related risks are in place. In this review, an AIFI should also consider the possible difficulty in valuing the new products and how they might perform in a stressed economic environment. The Board should ensure that the senior management of the AIFI:

(i) establishes a risk framework in order to assess and appropriately manage the various risk exposures of the AIFI;

(ii) develops a system to monitor the AIFI's risk exposures and to relate them to the AIFI's capital and reserve funds;
(iii) establishes a method to monitor the AIFI’s compliance with internal policies, particularly in regard to risk management; and

(iv) effectively communicates all relevant policies and procedures throughout the AIFI.

An AIFI’s risk function and its chief risk officer (CRO) or equivalent position should be independent of the individual business lines and report directly to the chief executive officer (CEO) / Managing Director and the institution’s Board. In addition, the risk function should highlight to senior management and the Board risk management concerns, such as risk concentrations and violations of risk appetite limits.

12.3.3.4 Policies, procedures, limits and controls:

The structure, design and contents of an AIFI’s ICAAP should be approved by the Board to ensure that the ICAAP forms an integral part of the management process and decision making culture of the AIFI. Institution-wide risk management programmes should include detailed policies that set specific Institution-wide prudential limits on the principal risks relevant to an AIFI’s activities. An AIFI’s policies and procedures should provide specific guidance for the implementation of broad business strategies and should establish, where appropriate, internal limits for the various types of risk to which the AIFI may be exposed. These limits should consider the AIFI’s role in the financial system and be defined in relation to the AIFI’s capital, total assets, earnings or, where adequate measures exist, its overall risk level.

An AIFI’s policies, procedures and limits should:

- Provide for adequate and timely identification, measurement, monitoring, control and mitigation of the risks posed by its lending, investing, trading, securitisation, off-balance sheet, fiduciary and other significant activities at the business line and Institution-wide levels;

- Ensure that the economic substance of an AIFI’s risk exposures, including reputational risk and valuation uncertainty, are fully recognised and incorporated into the AIFI’s risk management processes;

- Be consistent with the AIFI’s stated goals and objectives, as well as its overall financial strength;

- Clearly delineate accountability and lines of authority across the AIFI’s various business activities, and ensure that there is a clear separation between business lines and the risk function;

- Escalate and address breaches of internal position limits;

- Provide for the review of new businesses and products by bringing together all relevant risk management, control and business lines to ensure that the AIFI is able to manage and control the activity prior to it being initiated; and

- Include a schedule and process for reviewing the policies, procedures and limits and for updating them as appropriate.

12.3.3.5 Identifying, measuring, monitoring and reporting of risk:

(i) An AIFI’s MIS should provide the Board and senior management in a clear and concise manner with timely and relevant information concerning their institutions’ risk
profile. This information should include all risk exposures, including those that are off-
balance sheet. Management should understand the assumptions behind and
limitations inherent in specific risk measures.

(ii) The key elements necessary for the aggregation of risks are an appropriate
infrastructure and MIS that (i) allow for the aggregation of exposures and risk
measures across business lines and (ii) support customised identification of
concentrations and emerging risks. MIS developed to achieve this objective should
support the ability to evaluate the impact of various types of economic and financial
shocks that affect the whole of the financial institution. Further, an AIFI’s systems
should be flexible enough to incorporate hedging and other risk mitigation actions to
be carried out on a firm-wide basis while taking into account the various related basis
risks.

(iii) To enable proactive management of risk, the Board and senior management need to
ensure that MIS is capable of providing regular, accurate and timely information on
the AIFI’s aggregate risk profile, as well as the main assumptions used for risk
aggregation. MIS should be adaptable and responsive to changes in the AIFI’s
underlying risk assumptions and should incorporate multiple perspectives of risk
exposure to account for uncertainties in risk measurement. In addition, it should be
sufficiently flexible so that the institution can generate forward-looking AIFI-wide
scenario analyses that capture management’s interpretation of evolving market
conditions and stressed conditions. Third-party inputs or other tools used within MIS
(e.g. credit ratings, risk measures, models) should be subject to initial and ongoing
validation.

(iv) An AIFI’s MIS should be capable of capturing limit breaches and there should be
procedures in place to promptly report such breaches to senior management, as well
as to ensure that appropriate follow-up actions are taken. For instance, similar
exposures should be aggregated across business platforms (including the banking
and trading books) to determine whether there is a concentration or a breach of an
internal position limit.

12.3.3.6 Internal controls:
Risk management processes should be frequently monitored and tested by independent
control areas and internal, as well as external, auditors. The aim is to ensure that the
information on which decisions are based is accurate so that processes fully reflect
management policies and that regular reporting, including the reporting of limit breaches and
other exception-based reporting, is undertaken effectively. The risk management function of
AIFIs must be independent of the business lines in order to ensure an adequate separation
of duties and to avoid conflicts of interest.

Since a sound risk management process provides the basis for ensuring that an AIFI
maintains adequate capital, the Board of an AIFI shall set the tolerance level for risk.

12.3.3.7 Submission of the outcome of the ICAAP to the Board and the RBI
As the ICAAP is an ongoing process, a written record on the outcome of the ICAAP should
be periodically submitted by AIFIs to their Board. Such written record of the internal
assessment of its capital adequacy should include, *inter alia*, the risks identified, the manner
in which those risks are monitored and managed, the impact of the AIFI’s changing risk
profile on its capital position, details of stress tests/scenario analysis conducted and the
resultant capital requirements. The reports shall be sufficiently detailed to allow the Board to
evaluate the level and trend of material risk exposures, whether the AIFI maintains adequate
capital against the risk exposures and in case of additional capital being needed, the plan for
augmenting capital. The Board would be expected make timely adjustments to the strategic
Based on the outcome of the ICAAP as submitted to and approved by the Board, the ICAAP Document, in the format furnished at Annex 13, should be furnished to the RBI (i.e., to the CGM-in-Charge, Department of Supervision, Central Office, Reserve Bank of India, Mumbai). The document should reach the RBI latest by end of the first quarter (i.e. April-June) of the relevant financial year.

12.4 Review of the ICAAP Outcomes

The Board shall, at least once a year, assess and document whether the processes relating to ICAAP implemented by the AIFI successfully achieve the objectives envisaged by the Board. The senior management should also receive and review the reports regularly to evaluate the sensitivity of the key assumptions and to assess the validity of the AIFI's estimated future capital requirements. In the light of such an assessment, appropriate changes in the ICAAP should be instituted to ensure that the underlying objectives are effectively achieved.

12.5 ICAAP to be an Integral part of the Management and Decision-making Culture

The ICAAP should form an integral part of the management and decision-making culture of an AIFI. This integration could range from using the ICAAP to internally allocate capital to various business units, to having it play a role in the individual credit decision process and pricing of products or more general business decisions such as expansion plans and budgets. The integration would also mean that ICAAP should enable the AIFI management to assess, on an ongoing basis, the risks that are inherent in their activities and material to the institution.

12.6 The Principle of Proportionality

The implementation of ICAAP should be guided by the principle of proportionality. Though AIFIs are encouraged to migrate to and adopt progressively sophisticated approaches in designing their ICAAP, the RBI expects the degree of sophistication adopted in the ICAAP in regard to risk measurement and management to be commensurate with the nature, scope, scale and the degree of complexity in the AIFI's business operations. The following paragraphs illustratively enumerate the broad approach which could be considered by AIFIs with varying levels of complexity in their operations, in formulating their ICAAP.

(A) In relation to an AIFI that defines its activities and risk management practices as simple, in carrying out its ICAAP, that AIFI could:

(a) identify and consider that AIFI's largest losses over the last 3 to 5 years and whether those losses are likely to recur;

(b) prepare a short list of the most significant risks to which that AIFI is exposed;

(c) consider how that AIFI would act, and the amount of capital that would be absorbed in the event that each of the risks identified were to materialise;

(d) consider how that AIFI’s capital requirement might alter under the scenarios in (c) and how its capital requirement might alter in line with its business plans for the next 3 to 5 years; and

(e) document the ranges of capital required in the scenarios identified above and form an overall view on the amount and quality of capital which that AIFI should hold, ensuring that its senior management is involved in arriving at that view.

(B) In relation to an AIFI that defines its activities and risk management practices as moderately complex, in carrying out its ICAAP, that AIFI could:
(a) having consulted the operational management in each major business line, prepare a comprehensive list of the major risks to which the business is exposed;

(b) estimate, with the aid of historical data, where available, the range and distribution of possible losses which might arise from each of those risks and consider using shock stress tests to provide risk estimates;

(c) consider the extent to which that AIFI’s capital requirement adequately captures the risks identified in (a) and (b) above;

(d) for areas in which the capital requirement is either inadequate or does not address a risk, estimate the additional capital needed to protect that AIFI and its customers, in addition to any other risk mitigation action that AIFI plans to take;

(e) consider the risk that the AIFI’s own analyses of capital adequacy may be inaccurate and that it may suffer from management weaknesses which affect the effectiveness of its risk management and mitigation;

(f) project that AIFI’s business activities forward in detail for one year and in less detail for the next 3 to 5 years, and estimate how that AIFI’s capital and capital requirement would alter, assuming that business develops as expected;

(g) assume that business does not develop as expected and consider how that AIFI’s capital and capital requirement would alter and what that AIFI’s reaction to a range of adverse economic scenarios might be;

(h) document the results obtained from the analyses in (b), (d), (f), and (g) above in a detailed report for that AIFI’s top management / Board; and

(i) ensure that systems and processes are in place to review the accuracy of the estimates made in (b), (d), (f) and (g) (i.e., systems for back testing) vis-à-vis the performance / actuals.

(C) In relation to an AIFI that defines its activities and risk management practices as complex, in carrying out its ICAAP, that AIFI could follow a proportional approach to that AIFI’s ICAAP which should cover the issues identified at (a) to (d) in paragraph (B) above, but is likely also to involve the use of models, most of which will be integrated into its day-to-day management and operations.

Models of the kind referred to above may be linked so as to generate an overall estimate of the amount of capital that an AIFI considers appropriate to hold for its business needs. An AIFI may also link such models to generate information on the economic capital considered desirable for that AIFI. A model which an AIFI uses to generate its target amount of economic capital is known as an economic capital model (ECM). Economic capital is the target amount of capital which optimises the return for an AIFI’s stakeholders for a desired level of risk. For example, an AIFI is likely to use value-at-risk (VaR) models for market risk, advanced modelling approaches for credit risk and, possibly, advanced measurement approaches for operational risk. An AIFI might also use economic scenario generators to model stochastically its business forecasts and risks. However, AIFIs would need prior approval of the RBI for migrating to the advanced approaches envisaged in the Basel Capital Framework.

12.7 Regular Independent Review and Validation

The ICAAP should be subject to regular and independent review through an internal or external audit process, separately from the SREP conducted by the RBI, to ensure that the ICAAP is comprehensive and proportionate to the nature, scope, scale and level of complexity of the AIFI’s activities so that it accurately reflects the major sources of risk that the AIFI is exposed to. An AIFI shall ensure appropriate and effective internal control
structures, particularly in regard to the risk management processes, in order to monitor the AIFI's continued compliance with internal policies and procedures. As a minimum, an AIFI shall conduct periodic reviews of its risk management processes, which should ensure:

(a) the integrity, accuracy, and reasonableness of the processes;
(b) the appropriateness of the AIFI's capital assessment process based on the nature, scope, scale and complexity of the AIFI's activities;
(c) the timely identification of any concentration risk;
(d) the accuracy and completeness of any data inputs into the AIFI's capital assessment process;
(e) the reasonableness and validity of any assumptions and scenarios used in the capital assessment process; and
(f) that the AIFI conducts appropriate stress testing;

12.8 ICAAP to be a Forward-looking Process

The ICAAP should be forward looking in nature, and thus, should take into account the expected / estimated future developments such as strategic plans, macro-economic factors, etc., including the likely future constraints in the availability and use of capital. At a minimum, the management of an AIFI shall develop and maintain an appropriate strategy that would ensure that the AIFI maintains adequate capital commensurate with the nature, scope, scale, complexity and risks inherent in the AIFI's on-balance-sheet and off-balance-sheet activities, and should demonstrate as to how the strategy dovetails with the macro-economic factors.

Thus, AIFIs shall have an explicit, Board-approved capital plan which should spell out the institution's objectives in regard to level of capital, the time horizon for achieving those objectives, and in broad terms, the capital planning process and then allocate responsibilities for that process. The plan shall outline:

12.9 ICAAP to be a Risk-based Process

The adequacy of an AIFI's capital is a function of its risk profile. AIFIs shall, therefore, set their capital targets which are consistent with their risk profile and operating environment. At a minimum, an AIFI shall have in place a sound ICAAP, which shall include all material risk exposures incurred by the AIFI. There are some types of risks (such as reputation risk and strategic risk) which are less readily quantifiable; for such risks, the focus of the ICAAP should be more on qualitative assessment, risk management and mitigation than on quantification of such risks. AIFIs' ICAAP document shall clearly indicate for which risks a quantitative measure is considered warranted, and for which risks a qualitative measure is considered to be the correct approach.

12.10 ICAAP to Include Stress Tests and Scenario Analyses

As part of the ICAAP, the management of an AIFI shall, at a minimum, conduct relevant stress tests periodically, particularly in respect of the AIFI's material risk exposures, in order to evaluate the potential vulnerability of the AIFI to some unlikely but plausible events or movements in the market conditions that could have an adverse impact on the AIFI. The use of stress testing framework can provide an AIFI's management a better understanding of the AIFI's likely exposure in extreme circumstances. In this context, the attention is also invited to the risk management guidelines applicable to the AIFIs. The AIFIs are urged to take necessary measures for implementing an appropriate formal stress testing framework which would also meet the stress testing requirements under the ICAAP of the AIFIs.
12.11 Use of Capital Models for ICAAP

While there is no single prescribed approach as to how an AIFI should develop its capital model, an AIFI adopting a model-based approach to its ICAAP shall be able to, *inter alia*, demonstrate:

(a) Well documented model specifications, including the methodology / mechanics and the assumptions underpinning the working of the model;

(b) The extent of reliance on the historical data in the model and the system of back testing to be carried out to assess the validity of the outputs of the model vis-à-vis the actual outcomes;

(c) A robust system for independent validation of the model inputs and outputs;

(d) A system of stress testing the model to establish that the model remains valid even under extreme conditions / assumptions;

(e) The level of confidence assigned to the model outputs and its linkage to the AIFI’s business strategy;

(f) The adequacy of the requisite skills and resources within the AIFIs to operate, maintain and develop the model.

13. Select Operational Aspects of the ICAAP

This Section outlines in somewhat greater detail the scope of the risk universe expected to be normally captured by the AIFIs in their ICAAP.

13.1 Identifying and Measuring Material Risks in ICAAP

(i) The first objective of an ICAAP is to identify all material risks. Risks that can be reliably measured and quantified should be treated as rigorously as data and methods allow. The appropriate means and methods to measure and quantify those material risks are likely to vary across AIFIs.

(ii) Some of the risks to which AIFIs are exposed include credit risk, market risk, operational risk, interest rate risk in the banking book, credit concentration risk and liquidity risk (as briefly outlined below). The RBI has issued guidelines to the AIFIs on various risk management areas from time to time. An AIFI’s risk management processes, including its ICAAP, should, therefore, be consistent with this existing body of guidance. However, certain other risks, such as reputational risk and business or strategic risk, may be equally important for an AIFI and, in such cases, should be given same consideration as the more formally defined risk types. For example, an AIFI may be engaged in businesses for which periodic fluctuations in activity levels, combined with relatively high fixed costs, have the potential to create unanticipated losses that must be supported by adequate capital. Additionally, an AIFI might be involved in strategic activities (such as expanding business lines or engaging in acquisitions) that introduce significant elements of risk and for which additional capital would be appropriate.

(iii) Additionally, if AIFIs employ risk mitigation techniques, they should understand the risk to be mitigated and the potential effects of that mitigation, reckoning its enforceability and effectiveness, on the risk profile of the AIFI.
13.2 **Credit Risk**

13.2.1 AIFIs should have methodologies that enable them to assess the credit risk involved in exposures to individual borrowers or counterparties as well as at the portfolio level. AIFIs should be particularly attentive to identifying credit risk concentrations and ensuring that their effects are adequately assessed. This should include consideration of various types of dependence among exposures, incorporating the credit risk effects of extreme outcomes, stress events, and shocks to the assumptions made about the portfolio and exposure behaviour. AIFIs should also carefully assess concentrations in counterparty credit exposures, including counterparty credit risk exposures emanating from trading in less liquid markets, and determine the effect that these might have on the AIFI’s capital adequacy.

13.2.2 AIFIs should assess exposures, regardless of whether they are rated or unrated, and determine whether the risk weights applied to such exposures, under the Standardised Approach, are appropriate for their inherent risk. In those instances where an AIFI determines that the inherent risk of such an exposure, particularly if it is unrated, is significantly higher than that implied by the risk weight to which it is assigned, the AIFI should consider the higher degree of credit risk in the evaluation of its overall capital adequacy. For more sophisticated AIFIs, the credit review assessment of capital adequacy, at a minimum, should cover four areas: risk rating systems, portfolio analysis/aggregation, securitisation/complex credit derivatives, and large exposures and risk concentrations.

13.2.3 **Counterparty credit risk (CCR)**

(i) The AIFI must have counterparty credit risk management policies, processes and systems that are conceptually sound and implemented with integrity relative to the sophistication and complexity of an AIFI’s holdings of exposures that give rise to counterparty credit risk (CCR). A sound counterparty credit risk management framework shall include the identification, measurement, management, approval and internal reporting of CCR.

(ii) The AIFI’s risk management policies must take account of the market, liquidity, legal and operational risks that can be associated with CCR and, to the extent practicable, interrelationships among those risks. The AIFI must not undertake business with a counterparty without assessing its creditworthiness and must take due account of both settlement and pre-settlement credit risk. These risks must be managed as comprehensively as practicable at the counterparty level (aggregating counterparty exposures with other credit exposures) and at the enterprise-wide level.

(iii) The Board and senior management must be actively involved in the CCR control process and must regard this as an essential aspect of the business to which significant resources need to be devoted. The daily reports prepared on a firm’s exposures to CCR must be reviewed by a level of management with sufficient seniority and authority to enforce both reductions of positions taken by individual credit managers or traders and reductions in the AIFI’s overall CCR exposure.

(iv) The AIFI’s CCR management system must be used in conjunction with internal credit and trading limits.

---

70 In such cases it would be in order for AIFIs to derive notional external ratings of the unrated exposure by mapping their internal credit risk ratings / grades of the exposure used for pricing purposes with the external ratings scale.
(v) The measurement of CCR must include monitoring daily and intra-day usage of credit lines. The AIFI must measure current exposure gross and net of collateral held where such measures are appropriate and meaningful (e.g. OTC derivatives, margin lending, etc.). Measuring and monitoring peak exposure or potential future exposure (PFE), both the portfolio and counterparty levels is one element of a robust limit monitoring system. AIFIs must take account of large or concentrated positions, including concentrations by groups of related counterparties, by industry, by market, customer investment strategies, etc.

(vi) The AIFI must have an appropriate stress testing methodology in place to assess the impact on the counterparty credit risk of abnormal volatilities in market variables driving the counterparty exposures and changes in the creditworthiness of the counterparty. The results of this stress testing must be reviewed periodically by senior management and must be reflected in the CCR policies and limits set by management and the Board. Where stress tests reveal particular vulnerability to a given set of circumstances, management should explicitly consider appropriate risk management strategies (e.g. by hedging against that outcome, or reducing the size of the firm’s exposures).

(vii) The AIFI must have a routine in place for ensuring compliance with a documented set of internal policies, controls and procedures concerning the operation of the CCR management system. The firm’s CCR management system must be well documented, for example, through a risk management manual that describes the basic principles of the risk management system and that provides an explanation of the empirical techniques used to measure CCR.

(viii) The AIFI must conduct an independent review of the CCR management system regularly through its own internal auditing process. This review must include both the activities of the business credit and trading units and of the independent CCR control unit. A review of the overall CCR management process must take place at regular intervals (ideally not less than once a year) and must specifically address, at a minimum:

- the adequacy of the documentation of the CCR management system and process;
- the organisation of the collateral management unit;
- the organisation of the CCR control unit;
- the integration of CCR measures into daily risk management;
- the approval process for risk pricing models and valuation systems used by front and back-office personnel;
- the validation of any significant change in the CCR measurement process;
- the scope of counterparty credit risks captured by the risk measurement model;
- the integrity of the management information system;
- the accuracy and completeness of CCR data;
- the accurate reflection of legal terms in collateral and netting agreements into exposure measurements; the verification of the consistency, timeliness and reliability of data sources used to run internal models, including the independence of such data sources;
- the accuracy and appropriateness of volatility and correlation assumptions;
the accuracy of valuation and risk transformation calculations; and

• the verification of the model’s accuracy through frequent back-testing.

(ix) AIFIs should make an assessment as part of their ICAAP as to whether the AIFI’s evaluation of the risks contained in the transactions that give rise to CCR and the AIFI’s assessment of whether the Current Exposure Method (CEM) captures those risks appropriately and satisfactorily. In cases where, under SREP, it is determined that CEM does not capture the risk inherent in the AIFI’s relevant transactions (as could be the case with structured, more complex OTC derivatives), RBI may require the AIFI to apply the CEM on a transaction-by-transaction basis (i.e. no netting will be recognized even if it is permissible legally).

13.3 Market Risk: An AIFI should be able to identify risks in trading activities resulting from a movement in market prices. This determination should consider factors such as illiquidity of instruments, concentrated positions, one-way markets, non-linear/deep out-of-the-money positions, and the potential for significant shifts in correlations. Exercises that incorporate extreme events and shocks should also be tailored to capture key portfolio vulnerabilities to the relevant market developments.

13.4 Operational Risk: An AIFI should be able to assess the potential risks resulting from inadequate or failed internal processes, people, and systems, as well as from events external to the AIFI. This assessment should include the effects of extreme events and shocks relating to operational risk. Events could include a sudden increase in failed processes across business units or a significant incidence of failed internal controls.

13.5 Interest Rate Risk in the Banking Book (IRRBB): An AIFI should identify the risks associated with the changing interest rates on its on-balance sheet and off-balance sheet exposures in the banking book from both, a short-term and long-term perspective. This might include the impact of changes due to parallel shocks, yield curve twists, yield curve inversions, changes in the relationships of rates (basis risk), and other relevant scenarios. The AIFI should be able to support its assumptions about the behavioural characteristics of its non-maturity deposits and other assets and liabilities, especially those exposures characterised by embedded optionality. Given the uncertainty in such assumptions, stress testing and scenario analysis should be used in the analysis of interest rate risks. While there could be several approaches to measurement of IRRBB, an illustrative approach for measurement of IRRBB is furnished at Annex 9. The AIFIs would, however, be free to adopt any other variant of these approaches or entirely different methodology for computing / quantifying the IRRBB provided the technique is based on objective, verifiable and transparent methodology and criteria.

13.6 Credit Concentration Risk: A risk concentration is any single exposure or a group of exposures with the potential to produce losses large enough (relative to an AIFI’s capital, total assets, or overall risk level) to threaten an AIFI’s health or ability to maintain its core operations. Risk concentrations have arguably been the single most important cause of major problems in financial systems. Concentration risk resulting from concentrated portfolios could be significant for AIFIs as well.

The following qualitative criteria could be adopted by AIFIs to demonstrate that the credit concentration risk is being adequately addressed:

(a) While assessing the exposure to concentration risk, an AIFI should keep in view that the calculations of Basel capital adequacy framework are based on the assumption that an AIFI is well diversified.
Typically, the AIFIs are sector-specific institutions and have a relatively limited scope for diversifying their assets portfolio. As a result, as compared to banks, these institutions have higher credit concentration risk. The ICAAPs prepared by these institutions must address this risk. One way to reduce overall credit concentration risk faced by the AIFIs is to limit their single name concentration by choosing to adopt lower large exposure limits. In addition, the AIFIs could consider diversifying their credit portfolios, inter-alia, along the following dimensions:

(i) Geographical spread within the country
(ii) Domestic/ International/ across countries (e.g. in case of EXIM Bank)
(iii) Industry segment
(iv) Direct Lending/ Refinance
(v) Production Credit/ Marketing Credit/ Investment Credit (e.g. in case of NABARD)
(vi) Microfinance/ SMEs/ Mid-corporate/ Large Corporates
(vii) Public Sector/ Private Sector Borrowers
(viii) Financial sector entities- Public Sector Banks/ Private Sector Banks/ RRBs/ Cooperative Banks, etc.
(ix) Residential/ Commercial Real Estate (e.g. in case of NHB)

The sectoral concentration risk and the risk arising from the above mentioned dimensions of credit concentration of the individual AIFI will be specifically evaluated under SREP and the AIFI may be required to hold additional capital to mitigate this risk.

While the AIFIs’ single borrower exposures, the group borrower exposures and capital market exposures are regulated by the exposure norms prescribed by the RBI, there could be concentrations in these portfolios as well. In assessing the degree of credit concentration, therefore, an AIFI shall consider not only the foregoing exposures but also consider the degree of credit concentration in a particular economic sector or geographical area. AIFIs with operational concentration in a few geographical regions, shall also consider the impact of adverse economic developments in that region, and their impact on the asset quality.

The performance of specialised portfolios may, in some instances, also depend on key individuals / employees of the AIFI. Such a situation could exacerbate the concentration risk because the skills of those individuals, in part, limit the risk arising from a concentrated portfolio. The impact of such key employees / individuals on the concentration risk is likely to be correspondingly greater in smaller AIFIs. In developing its stress tests and scenario analyses, an AIFI shall, therefore, also consider the impact of losing key personnel on its ability to operate normally, as well as the direct impact on its revenues.

As regards the quantitative criteria to be used to ensure that credit concentration risk is being adequately addressed, the credit concentration risk calculations shall be performed at the counterparty level (i.e., large exposures), at the portfolio level (i.e., sectoral and geographical concentrations) and at the asset class level (i.e., liability and assets concentrations). As a prudent practice, AIFIs may like to ensure that their aggregate exposure (including non-funded exposures) to all ‘large borrowers’ does not exceed at any time, 800 per cent of their ‘capital funds’. The ‘large borrower’ for this purpose could be taken to mean as one to whom the AIFI’s aggregate exposure (funded as well as non-funded) exceeds 10 per cent of the AIFI’s capital funds. The AIFIs would also be well advised to pay special attention to their industry-wise exposures where their exposure to a particular industry exceeds 10 per cent of their aggregate credit exposure (including investment exposure) to the industrial sector as a whole.

There could be several approaches to the measurement of credit concentration of the AIFIs’ portfolio. One of the approaches commonly used for the purpose involves computation of
Herfindahl-Hirshman Index (HHI). It may please be noted that the HHI as a measure of concentration risk is only one of the possible methods and the AIFIs would be free to adopt any other appropriate method for the purpose, which has objective and transparent criteria for such measurement.

Risk concentrations should be analysed on both solo and consolidated basis.71 Risk concentrations should be viewed in the context of a single or a set of closely related risk-drivers that may have different impacts on an AIFI. These concentrations should be integrated when assessing an AIFI’s overall risk exposure. An AIFI should consider concentrations that are based on common or correlated risk factors that reflect more subtle or more situation-specific factors than traditional concentrations, such as correlations between market, credit risks and liquidity risk.

The growth of market-based intermediation has increased the possibility that different areas of an AIFI are exposed to a common set of products, risk factors or counterparties. This has created new challenges for risk aggregation and concentration management. Through its risk management processes and MIS, an AIFI should be able to identify and aggregate similar risk exposures across the firm, including across legal entities, asset types (e.g. loans, derivatives and structured products), risk areas (e.g. the trading book) and geographic regions. In addition to the situations described in para 13.6 (b) above, risk concentrations can arise include:

- exposures to a single counterparty, or group of connected counterparties;
- exposures to both regulated and non-regulated financial institutions such as hedge funds and private equity firms;
- trading exposures/market risk;
  - exposures to counterparties (e.g. hedge funds and hedge counterparties) through the execution or processing of transactions (either product or service);
  - funding sources;
  - assets that are held in the banking book or trading book, such as loans, derivatives and structured products; and
  - off-balance sheet exposures, including guarantees, liquidity lines and other commitments.

Risk concentrations can also arise through a combination of exposures across these broad categories. An AIFI should have an understanding of its institution-wide risk concentrations resulting from similar exposures across its different business lines. Examples of such business lines include subprime exposure in lending books; counterparty exposures; conduit exposures and SIVs; contractual and non-contractual exposures; trading activities; and underwriting pipelines.

Procedures should be in place to communicate risk concentrations to the Board and senior management in a manner that clearly indicates where in the organisation each segment of a risk concentration resides. An AIFI should have credible risk mitigation strategies in place that have senior management approval. This may include altering business strategies, reducing limits or increasing capital buffers in line with the desired risk profile. While it implements risk mitigation strategies, the AIFI should be aware of possible concentrations that might arise as a result of employing risk mitigation techniques.

AIFIs should employ a number of techniques, as appropriate, to measure risk

---

71 Master Circular DBOD.No.BP.BC.73/21.06.001/2009-10 dated Feb 8, 2010 addressed to banks.
concentrations. These techniques include shocks to various risk factors; use of business level and institution-wide scenarios; and the use of integrated stress testing and economic capital models. Identified concentrations should be measured in a number of ways, including for example consideration of gross versus net exposures, use of notional amounts, and analysis of exposures with and without counterparty hedges. An AIFI should establish internal position limits for concentrations to which it may be exposed. When conducting periodic stress tests an AIFI should incorporate all major risk concentrations and identify and respond to potential changes in market conditions that could adversely impact their performance and capital adequacy.

The assessment of such risks under an AIFI’s ICAAP and the supervisory review process should not be a mechanical process, but one in which each AIFI determines, depending on its business model, its own specific vulnerabilities. An appropriate level of capital for risk concentrations should be incorporated in an AIFI’s ICAAP, as well as in Pillar 2 assessments. Each AIFI should discuss such issues with its supervisor.

An AIFI should have in place effective internal policies, systems and controls to identify, measure, monitor, manage, control and mitigate its risk concentrations in a timely manner. Not only should normal market conditions be considered, but also the potential build-up of concentrations under stressed market conditions, economic downturns and periods of general market illiquidity. In addition, the AIFI should assess scenarios that consider possible concentrations arising from contractual and non-contractual contingent claims. The scenarios should also combine the potential build-up of pipeline exposures together with the loss of market liquidity and a significant decline in asset values.

13.7 Liquidity Risk: An AIFI should understand the risks resulting from its inability to meet its obligations as they come due, because of difficulty in liquidating assets (market liquidity risk) or in obtaining adequate funding (funding liquidity risk). This assessment should include analysis of sources and uses of funds, an understanding of the funding markets in which the AIFI operates, and an assessment of the efficacy of a contingency funding plan for events that could arise.

The recent financial market crisis underscores the importance of assessing the potential impact of liquidity risk on capital adequacy in an AIFI’s ICAAP. Senior management should consider the relationship between liquidity and capital since liquidity risk can impact capital adequacy which, in turn, can aggravate an AIFI’s liquidity profile.

A key element in the management of liquidity risk is the need for strong governance of liquidity risk, including the setting of a liquidity risk tolerance by the Board. The risk tolerance should be communicated throughout the AIFI and reflected in the strategy and policies that senior management set to manage liquidity risk. Another facet of liquidity risk management is that an AIFI should appropriately price the costs, benefits and risks of liquidity into the internal pricing, performance measurement, and new product approval process of all significant business activities.

An AIFI is expected to be able to thoroughly identify, measure and control liquidity risks, especially with regard to complex products and contingent commitments (both contractual and non-contractual). This process should involve the ability to project cash flows arising from assets, liabilities and off-balance sheet items over various time horizons, and should ensure diversification in both the tenor and source of funding. An AIFI should utilise early warning indicators to identify the emergence of increased risk or vulnerabilities in its liquidity position or funding needs. It should have the ability to control liquidity risk exposure and funding needs, regardless of its organisation structure, within and across legal entities, business lines, and currencies, taking into account any legal, regulatory and operational limitations to the transferability of liquidity.
While AIFIs typically manage liquidity under “normal” circumstances, they should also be prepared to manage liquidity under “stressed” conditions. An AIFI should perform stress tests or scenario analyses on a regular basis in order to identify and quantify their exposures to possible future liquidity stresses, analysing possible impacts on the institutions’ cash flows, liquidity positions, profitability, and solvency. The results of these stress tests should be discussed thoroughly by management, and based on this discussion, should form the basis for taking remedial or mitigating actions to limit the AIFI’s exposures, build up a liquidity cushion, and adjust its liquidity profile to fit its risk tolerance. The results of stress tests should also play a key role in shaping the AIFI’s contingency funding planning, which should outline policies for managing a range of stress events and clearly sets out strategies for addressing liquidity shortfalls in emergency situations.

As public disclosure increases certainty in the market, improves transparency, facilitates valuation, and strengthens market discipline, it is important that AIFIs publicly disclose information on a regular basis that enables market participants to make informed decisions about the soundness of their liquidity risk management framework and liquidity position.

13.8 Off-Balance Sheet Exposures and Securitisation Risk

In light of the wide range of risks arising from securitisation activities, which can be compounded by rapid innovation in securitisation techniques and instruments, minimum capital requirements calculated under Pillar 1 are often insufficient. All risks arising from securitisation, particularly those that are not fully captured under Pillar 1, should be addressed in an AIFI’s ICAAP. These risks include:

- Credit, market, liquidity and reputational risk of each exposure;
- Potential delinquencies and losses on the underlying securitised exposures;
- Exposures from credit lines or liquidity facilities to special purpose entities;
- Exposures from guarantees provided by monolines and other third parties.

Securitisation exposures should be included in the AIFI’s MIS to help ensure that senior management understands the implications of such exposures for liquidity, earnings, risk concentration and capital. More specifically, an AIFI should have the necessary processes in place to capture in a timely manner, updated information on securitisation transactions including market data, if available, and updated performance data from the securitisation trustee or servicer.

13.9 Reputational Risk and Implicit Support

13.9.1 Provision of Implicit Support for Securitization Transactions

(i) Provision of implicit support to a transaction, whether contractual (i.e. credit enhancements provided at the inception of a securitised transaction) or non-contractual (implicit support) can take numerous forms. For instance, contractual support can include over collateralisation, credit derivatives, spread accounts, contractual recourse obligations, subordinated notes, credit risk mitigants provided to a specific tranche, the subordination of fee or interest income or the deferral of margin income, and clean-up calls that exceed 10 percent of the initial issuance. Examples of implicit support include the purchase of deteriorating credit risk exposures from the underlying pool, the sale of discounted credit risk exposures into the pool of securitised credit risk exposures, the purchase of underlying exposures at above market price or an increase in the first loss position according to the deterioration of the underlying exposures.

---

(ii) The provision of implicit (or non-contractual) support, as opposed to contractual credit support (i.e. credit enhancements), raises significant supervisory concerns. For traditional securitisation structures the provision of implicit support undermines the clean break criteria, which when satisfied would allow AIFIs to exclude the securitised assets from regulatory capital calculations. By providing implicit support, AIFIs signal to the market that the risk is still with the AIFI and has not in effect been transferred. The institution’s capital calculation therefore understates the true risk. Accordingly, national supervisors are expected to take appropriate action when a financial entity provides implicit support.

(iii) When an AIFI has been found to provide implicit support to a securitisation, it will be required to hold capital against all of the underlying exposures associated with the structure as if they had not been securitised. It will also be required to disclose publicly that it was found to have provided non-contractual support, as well as the resulting increase in the capital charge (as noted above). The aim is to require AIFIs to hold capital against exposures for which they assume the credit risk, and to discourage them from providing non-contractual support.

(iv) If an AIFI is found to have provided implicit support on more than one occasion, the AIFI is required to disclose its transgression publicly and the Reserve Bank will take appropriate action that may include, but is not limited to, one or more of the following:

- The AIFI may be prevented from gaining favourable capital treatment on securitised assets for a period of time to be determined by the Reserve Bank;
- The AIFI may be required to hold capital against all securitised assets as though the AIFI had created a commitment to them, by applying a conversion factor to the risk weight of the underlying assets;
- For purposes of capital calculations, the AIFI be required to treat all securitised assets as if they remained on the balance sheet; and
- The AIFI may be required by the Reserve Bank to hold regulatory capital in excess of the minimum risk-based capital ratios.

(v) During the SREP, Reserve Bank will determine implicit support and may take appropriate supervisory action to mitigate the effects. Pending any investigation, the AIFI may be prohibited from any capital relief for planned securitisation transactions (moratorium). The action of Reserve Bank will be aimed at changing the AIFI’s behaviour with regard to the provision of implicit support, and to correct market perception as to the willingness of the AIFI to provide future recourse beyond contractual obligations.

13.9.2 Reputational Risk on Account of Implicit Support

(i) Reputational risk can be defined as the risk arising from negative perception on the part of customers, counterparties, shareholders, investors, debt-holders, market analysts, other relevant parties or regulators that can adversely affect an AIFI's ability to maintain existing, or establish new, business relationships and continued access to sources of funding (e.g. through the interbank or securitisation markets). Reputational risk is multidimensional and reflects the perception of other market participants. Furthermore, it exists throughout the organisation and exposure to reputational risk is essentially a function of the adequacy of the AIFI's internal risk management processes, as well as the manner and efficiency with which management responds to external influences on AIFI-related transactions.

(ii) In general, the AIFIs do not engage in the structuring and sale of highly innovative financial products that may raise reputational risk concerns due to possible mis-selling to clients. However, the AIFIs that have subsidiaries may be called upon to provide unexpected capital or liquidity support to them in case the latter face financial/liquidity stress. All the
AIFIs are statutory organisations owned by government and public sector entities (except IDBI which has shareholding in SIDBI). Owing to such ownership structure, the AIFIs’ activities could potentially have implications for the reputation of the Government. The AIFIs need to take into account these factors while conducting their affairs.

(iii) Reputational risk can lead to the provision of implicit support, which may give rise to credit, liquidity, market and legal risk - all of which can have a negative impact on an AIFI's earnings, liquidity and capital position. An AIFI should identify potential sources of reputational risk to which it is exposed. These include the AIFI's business lines, liabilities, affiliated operations, off-balance sheet vehicles and the markets in which it operates. The risks that arise should be incorporated into the AIFI's risk management processes and appropriately addressed in its ICAAP and liquidity contingency plans.

(iv) Reputational risk also may affect an AIFI's liabilities, since market confidence and an AIFI's ability to fund its business are closely related to its reputation. For instance, to avoid damaging its reputation, an AIFI may call its liabilities even though this might negatively affect its liquidity profile. This is particularly true for liabilities that are components of regulatory capital, such as hybrid / subordinated debt. In such cases, an AIFI's capital position is likely to suffer.

(v) AIFI management should have appropriate policies in place to identify sources of reputational risk when entering new markets, products or lines of activities. In addition, an AIFI's stress testing procedures should take account of reputational risk so management has a firm understanding of the consequences and second round effects of reputational risk.

(vi) Once an AIFI identifies potential exposures arising from reputational concerns, it should measure the amount of support it might have to provide (including implicit support of securitisations) or losses it might experience under adverse market conditions. In particular, in order to avoid reputational damages and to maintain market confidence, an AIFI should develop methodologies to measure as precisely as possible the effect of reputational risk in terms of other risk types (eg credit, liquidity, market or operational risk) to which it may be exposed. This could be accomplished by including reputational risk scenarios in regular stress tests. For instance, non-contractual off-balance sheet exposures could be included in the stress tests to determine the effect on an AIFI's credit, market and liquidity risk profiles. Methodologies also could include comparing the actual amount of exposure carried on the balance sheet versus the maximum exposure amount held off-balance sheet, that is, the potential amount to which the AIFI could be exposed.

(vii) An AIFI should pay particular attention to the effects of reputational risk on its overall liquidity position, taking into account both possible increases in the asset side of the balance sheet and possible restrictions on funding, should the loss of reputation result in various counterparties' loss of confidence.

(viii) In contrast to contractual credit exposures, such as guarantees, implicit support is a more subtle form of exposure. Implicit support arises when an AIFI provides post-sale support to a securitisation transaction in excess of any contractual obligation. Implicit support may include any letter of comfort provided by the originator in respect of the present or future liabilities of the SPV. Such non-contractual support exposes an AIFI to the risk of loss, such as loss arising from deterioration in the credit quality of the securitisation’s underlying assets.

(ix) By providing implicit support, an AIFI signals to the market that all of the risks inherent in the securitised assets are still held by the organisation and, in effect, had not been transferred. Since the risk arising from the potential provision of implicit support is not captured ex ante under Pillar 1, it must be considered as part of the Pillar 2 process. In addition, the processes for approving new products or strategic initiatives should consider the potential provision of implicit support and should be incorporated in an AIFI's ICAAP.
13.10 Risk Evaluation and Management

An AIFI should conduct analyses of the underlying risks when investing in the structured products (permitted by RBI) and must not solely rely on the external credit ratings assigned to securitisation exposures by the credit rating agencies. An AIFI should be aware that external ratings are a useful starting point for credit analysis, but are no substitute for full and proper understanding of the underlying risk, especially where ratings for certain asset classes have a short history or have been shown to be volatile. Moreover, an AIFI also should conduct credit analysis of the securitisation exposure at acquisition and on an ongoing basis. It should also have in place the necessary quantitative tools, valuation models and stress tests of sufficient sophistication to reliably assess all relevant risks.

When assessing securitisation exposures, an AIFI should ensure that it fully understands the credit quality and risk characteristics of the underlying exposures in structured credit transactions, including any risk concentrations. In addition, an AIFI should review the maturity of the exposures underlying structured credit transactions relative to the issued liabilities in order to assess potential maturity mismatches.

An AIFI should track credit risk in securitisation exposures at the transaction level and across securitisation exposures within each business line and across business lines. It should produce reliable measures of aggregate risk. An AIFI also should track all meaningful concentrations in securitisation exposures, such as name, product or sector concentrations, and feed this information to firm-wide risk aggregation systems that track, for example, credit exposure to a particular obligor.

An AIFI’s own assessment of risk needs to be based on a comprehensive understanding of the structure of the securitisation transaction. It should identify the various types of triggers, credit events and other legal provisions that may affect the performance of its on- and off-balance sheet exposures and integrate these triggers and provisions into its funding/liquidity, credit and balance sheet management. The impact of the events or triggers on an AIFI’s liquidity and capital position should also be considered.

An AIFI should consider scenarios which may prevent it from securitising its assets as part of its stress testing and identify the potential effect of such exposures on its liquidity, earnings and capital adequacy.

An AIFI should develop prudent contingency plans specifying how it would respond to funding, capital and other pressures that arise when access to securitisation markets is reduced. The contingency plans should also address how the AIFI would address valuation challenges for potentially illiquid positions held for sale or for trading. The risk measures, stress testing results and contingency plans should be incorporated into the AIFI’s risk management processes and its ICAAP, and should result in an appropriate level of capital under Pillar 2 in excess of the minimum requirements.

An AIFI that employs risk mitigation techniques should fully understand the risks to be mitigated, the potential effects of that mitigation and whether or not the mitigation is fully effective. This is to help ensure that the AIFI does not understate the true risk in its assessment of capital. In particular, it should consider whether it would provide support to the securitisation structures in stressed scenarios due to the reliance on securitisation as a funding tool.

13.11 Valuation Practices

The characteristics of complex structured products, including securitisation transactions, make their valuation inherently difficult due, in part, to the absence of active and liquid markets, the complexity and uniqueness of the cash waterfalls, and the links between valuations and underlying risk factors. The absence of a transparent price from a liquid
market means that the valuation must rely on models or proxy-pricing methodologies, as well as on expert judgment. The outputs of such models and processes are highly sensitive to the inputs and parameter assumptions adopted, which may themselves be subject to estimation error and uncertainty. Moreover, calibration of the valuation methodologies is often complicated by the lack of readily available benchmarks. Therefore, an AIFI is expected to have adequate governance structures and control processes for fair valuing exposures for risk management and financial reporting purposes. The valuation governance structures and related processes should be embedded in the overall governance structure of the AIFI, and consistent for both risk management and reporting purposes. The governance structures and processes are expected to explicitly cover the role of the Board and senior management. In addition, the Board should receive reports from senior management on the valuation oversight and valuation model performance issues that are brought to senior management for resolution, as well as all significant changes to valuation policies.

An AIFI should also have clear and robust governance structures for the production, assignment and verification of financial instrument valuations. Policies should ensure that the approvals of all valuation methodologies are well documented. In addition, policies and procedures should set forth the range of acceptable practices for the initial pricing, marking-to-market/model, valuation adjustments and periodic independent revaluation. New product approval processes should include all internal stakeholders relevant to risk measurement, risk control, and the assignment and verification of valuations of financial instruments.

An AIFI’s control processes for measuring and reporting valuations should be consistently applied across the firm and integrated with risk measurement and management processes. In particular, valuation controls should be applied consistently across similar instruments (risks) and consistent across business lines (books). These controls should be subject to internal audit. Regardless of the booking location of a new product, reviews and approval of valuation methodologies must be guided by a minimum set of considerations. Furthermore, the valuation/new product approval process should be supported by a transparent, well-documented inventory of acceptable valuation methodologies that are specific to products and businesses.

In order to establish and verify valuations for instruments and transactions in which it engages, an AIFI must have adequate capacity, including during periods of stress. This capacity should be commensurate with the importance, riskiness and size of these exposures in the context of the business profile of the institution. In addition, for those exposures that represent material risk, an AIFI is expected to have the capacity to produce valuations using alternative methods in the event that primary inputs and approaches become unreliable, unavailable or not relevant due to market discontinuities or illiquidity. An AIFI must test and review the performance of its models under stress conditions so that it understands the limitations of the models under stress conditions.

The relevance and reliability of valuations is directly related to the quality and reliability of the inputs. An AIFI is expected to apply the accounting guidance provided to determine the relevant market information and other factors likely to have a material effect on an instrument’s fair value when selecting the appropriate inputs to use in the valuation process. Where values are determined to be in an active market, an AIFI should maximise the use of relevant observable inputs and minimise the use of unobservable inputs when estimating fair value using a valuation technique. However, where a market is deemed inactive, observable inputs or transactions may not be relevant, such as in a forced liquidation or distress sale, or transactions may not be observable, such as when markets are inactive. In such cases, accounting fair value guidance provides assistance on what should be considered, but may not be determinative. In assessing whether a source is reliable and relevant, an AIFI should consider, among other things:
- 125 -

- the frequency and availability of the prices/quotes;
- whether those prices represent actual regularly occurring transactions on an arm's length basis;
- the breadth of the distribution of the data and whether it is generally available to the relevant participants in the market;
- the timeliness of the information relative to the frequency of valuations;
- the number of independent sources that produce the quotes/prices;
- whether the quotes/prices are supported by actual transactions;
- the maturity of the market; and
- the similarity between the financial instrument sold in a transaction and the instrument held by the institution.

An AIFI's external reporting should provide timely, relevant, reliable and decision useful information that promotes transparency. Senior management should consider whether disclosures around valuation uncertainty can be made more meaningful. For instance, the AIFI may describe the modelling techniques and the instruments to which they are applied; the sensitivity of fair values to modelling inputs and assumptions; and the impact of stress scenarios on valuations. An AIFI should regularly review its disclosure policies to ensure that the information disclosed continues to be relevant to its business model and products and to current market conditions.

13.12 Sound Stress Testing Practices

Stress testing is an important tool that is used by AIFIs as part of their internal risk management that alerts AIFI management to adverse unexpected outcomes related to a broad variety of risks, and provides an indication to AIFIs of how much capital might be needed to absorb losses should large shocks occur. Moreover, stress testing supplements other risk management approaches and measures. It plays a particularly important role in:

- providing forward looking assessments of risk,
- overcoming limitations of models and historical data,
- supporting internal and external communication,
- feeding into capital and liquidity planning procedures,
- informing the setting of a AIFIs' risk tolerance,
- addressing existing or potential, firm-wide risk concentrations, and
- facilitating the development of risk mitigation or contingency plans across a range of stressed conditions.

Stress testing is especially important after long periods of benign risk, when the fading memory of negative economic conditions can lead to complacency and the underpricing of risk, and when innovation leads to the rapid growth of new products for which there is limited or no loss data.

It should be recognised that improvements in stress testing alone cannot address all risk management weaknesses, but as part of a comprehensive approach, stress testing has a leading role to play in strengthening corporate governance and the resilience of individual AIFIs and the financial system.

Stress testing should form an integral part of the overall governance and risk management culture of the AIFI. Board and senior management involvement in setting stress testing objectives, defining scenarios, discussing the results of stress tests, assessing potential
actions and decision making is critical in ensuring the appropriate use of stress testing in AIFIs’ risk governance and capital planning. Senior management should take an active interest in the development in, and operation of, stress testing. The results of stress tests should contribute to strategic decision making and foster internal debate regarding assumptions, such as the cost, risk and speed with which new capital could be raised or what positions could be hedged or sold. Board and senior management involvement in the stress testing program is essential for its effective operation.

An AIFI’s capital planning process should incorporate rigorous; forward looking stress testing that identifies possible events or changes in market conditions that could adversely impact the AIFI. AIFIs, under their ICAAPs should examine future capital resources and capital requirements under adverse scenarios. In particular, the results of forward-looking stress testing should be considered when evaluating the adequacy of an AIFI’s capital buffer. Capital adequacy should be assessed under stressed conditions against a variety of capital ratios, including regulatory ratios, as well as ratios based on the AIFI’s internal definition of capital resources. In addition, the possibility that a crisis impairs the ability of even a healthy financial entity to raise funds at reasonable cost should be considered.

An AIFI should develop methodologies to measure the effect of reputational risk in terms of other risk types, namely credit, liquidity, market and other risks that they may be exposed to in order to avoid reputational damages and in order to maintain market confidence. This could be done by including reputational risk scenarios in regular stress tests. For instance, including non-contractual off-balance sheet exposures in the stress tests to determine the effect on an AIFI’s credit, market and liquidity risk profiles.

An AIFI should carefully assess the risks with respect to commitments to off-balance sheet vehicles and third-party firms related to structured credit securities and the possibility that assets will need to be taken on balance sheet for reputational reasons. Therefore, in its stress testing programme, an AIFI should include scenarios assessing the size and soundness of such vehicles and firms relative to its own financial, liquidity and regulatory capital positions. This analysis should include structural, solvency, liquidity and other risk issues, including the effects of covenants and triggers.

13.13 Risk management must be embedded in the culture of an AIFI. It should be a critical focus of the CEO/Managing Director, Chief Risk Officer (CRO), senior management, trading desk and other business line heads and employees in making strategic and day-to-day decisions. For a broad and deep risk management culture to develop and be maintained over time, compensation policies must not be unduly linked to short term accounting profit generation. Compensation policies should be linked to longer term capital preservation and the financial strength of the firm and should consider risk-adjusted performance measures. In addition, an AIFI should provide adequate disclosure regarding its compensation policies to stakeholders. Each AIFI’s board of directors and senior management have the responsibility to mitigate the risks arising from remuneration policies in order to ensure effective firm-wide risk management.

Compensation practices at large financial institutions are one factor among many that contributed to the financial crisis that began in 2007. High short-term profits led to generous bonus payments to employees without adequate regard to the longer-term risks they imposed on their firms. These incentives amplified the excessive risk taking that has threatened the global financial system and left firms with fewer resources to absorb losses as risks materialised. The lack of attention to risk also contributed to the large, in some cases extreme absolute level of compensation in the industry. As a result, to improve compensation practices and strengthen supervision in this area, particularly for systemically important firms, the Financial Stability Board (formerly the Financial Stability Forum) published its Principles for Sound Compensation Practices in April 2009.
An AIFI’s board of directors must actively oversee the compensation system’s design and operation, which should not be controlled primarily by the chief executive officer and management team. Relevant board members and employees must have independence and expertise in risk management and compensation. In addition, the board of directors must monitor and review the compensation system to ensure the system includes adequate controls and operates as intended. The practical operation of the system should be regularly reviewed to ensure compliance with policies and procedures. Compensation outcomes, risk measurements, and risk outcomes should be regularly reviewed for consistency with intentions.

Staff that are engaged in the financial and risk control areas must be independent, have appropriate authority, and be compensated in a manner that is independent of the business areas they oversee and commensurate with their key role in the firm. Effective independence and appropriate authority of such staff is necessary to preserve the integrity of financial and risk management’s influence on incentive compensation.

Compensation must be adjusted for all types of risk so that remuneration is balanced between the profit earned and the degree of risk assumed in generating the profit. In general, both quantitative measures and human judgment should play a role in determining the appropriate risk adjustments, including those that are difficult to measure such as liquidity risk and reputation risk.

Compensation outcomes must be symmetric with risk outcomes and compensation systems should link the size of the bonus pool to the overall performance of the firm. Employees’ incentive payments should be linked to the contribution of the individual and business to the firm’s overall performance.

Compensation payout schedules must be sensitive to the time horizon of risks. Profits and losses of different activities of a financial firm are realised over different periods of time. Variable compensation payments should be deferred accordingly. Payments should not be finalised over short periods where risks are realised over long periods. Management should question payouts for income that cannot be realised or whose likelihood of realisation remains uncertain at the time of payout.

The mix of cash, equity and other forms of compensation must be consistent with risk alignment. The mix will vary depending on the employee’s position and role. The firm should be able to explain the rationale for its mix.

RBI will review compensation practices in a rigorous and sustained manner and deficiencies, if any, will be addressed promptly with the appropriate supervisory action.

13.14 The risk factors discussed above should not be considered an exhaustive list of those affecting any given AIFI. All relevant factors that present a material source of risk to capital should be incorporated in a well-developed ICAAP. Furthermore, AIFIs should be mindful of the capital adequacy effects of concentrations that may arise within each risk type.

13.15 Quantitative and Qualitative Approaches in ICAAP

(a) All measurements of risk incorporate both quantitative and qualitative elements, but to the extent possible, a quantitative approach should form the foundation of an AIFI’s measurement framework. In some cases, quantitative tools can include the use of large historical databases; when data are more scarce, an AIFI may choose to rely more heavily on the use of stress testing and scenario analyses. AIFIs should understand when measuring risks that measurement error always exists, and in many cases the error is itself difficult to quantify. In general, an increase in uncertainty related to modeling and business complexity should result in a larger capital cushion.

(b) Quantitative approaches that focus on most likely outcomes for budgeting, forecasting, or performance measurement purposes may not be fully applicable for capital
adequacy because the ICAAP should also take less likely events into account. Stress testing and scenario analysis can be effective in gauging the consequences of outcomes that are unlikely but would have a considerable impact on safety and soundness.

(c) To the extent that risks cannot be reliably measured with quantitative tools – for example, where measurements of risk are based on scarce data or unproven quantitative methods – qualitative tools, including experience and judgment, may be more heavily utilised. AIFIs should be cognisant that qualitative approaches have their own inherent biases and assumptions that affect risk assessment; accordingly, AIFIs should recognise the biases and assumptions embedded in, and the limitations of, the qualitative approaches used.

13.16 Risk Aggregation and Diversification Effects

(a) An effective ICAAP should assess the risks across the entire AIFI. An AIFI choosing to conduct risk aggregation among various risk types or business lines should understand the challenges in such aggregation. In addition, when aggregating risks, AIFIs should ensure that any potential concentrations across more than one risk dimension are addressed, recognising that losses could arise in several risk dimensions at the same time, stemming from the same event or a common set of factors. For example, a localised natural disaster could generate losses from credit, market, and operational risks at the same time.

(b) In considering the possible effects of diversification, management should be systematic and rigorous in documenting decisions, and in identifying assumptions used in each level of risk aggregation. Assumptions about diversification should be supported by analysis and evidence. The AIFI should have systems capable of aggregating risks based on the AIFI’s selected framework. For example, an AIFI calculating correlations within or among risk types should consider data quality and consistency, and the volatility of correlations over time and under stressed market conditions.

13.17 AIFIs may undertake new activities including the ones which are only indirectly related to their statutory mandates. Normally AIFIs would not have prior expertise in these areas. Due care needs to be taken to identify and manage the strategic risks arising from taking new initiatives, e.g. expanding the scope of their refinance activities to a new set of institutions and designing new refinance products, new investment/financial products, entering into partnership with banks to introduce new products, etc.
Part C: Market Discipline

14. Guidelines for Market Discipline

14.1 General

14.1.1 The purpose of Market discipline is to complement the minimum capital requirements (detailed under Pillar 1) and the supervisory review process (detailed under Pillar 2). The aim is to encourage market discipline by developing a set of disclosure requirements which will allow market participants to assess key pieces of information on the scope of application, capital, risk exposures, risk assessment processes and hence, the capital adequacy of the institution.

14.1.2 In principle, AIFI's disclosures should be consistent with how senior management and the Board assess and manage the risks of the AIFI. Under Pillar 1, AIFIs use specified approaches / methodologies for measuring the various risks they face and the resulting capital requirements. It is believed that providing disclosures that are based on a common framework is an effective means of informing the market about an AIFI's exposure to those risks and provides a consistent and comprehensive disclosure framework that enhances comparability.

14.2 Achieving Appropriate Disclosure

14.2.1 Market discipline can contribute to a safe and sound banking/financial sector environment. Hence, non-compliance with the prescribed disclosure requirements would attract a penalty, including financial penalty. However, it is not intended that direct additional capital requirements would be a response to non-disclosure, except as indicated below.

14.2.2 In addition to the general intervention measures, the Basel Capital Adequacy Framework also anticipates a role for specific measures. Where disclosure is a qualifying criterion under Pillar 1 to obtain lower risk weightings and/or to apply specific methodologies, there would be a direct sanction (not being allowed to apply the lower risk weighting or the specific methodology).

14.3 Interaction with Accounting Disclosures

It is recognised that the Pillar 3 disclosure framework does not conflict with requirements under accounting standards, which are broader in scope. The BCBS has taken considerable efforts to see that the narrower focus of Pillar 3, which is aimed at disclosure of AIFI capital adequacy, does not conflict with the broader accounting requirements. The Reserve Bank will consider future modifications to the Market Discipline disclosures as necessary in light of its ongoing monitoring of this area and industry developments.

14.4 Validation

The disclosures in this manner should be subjected to adequate validation. For example, since information in the annual financial statements would generally be audited, the additional material published with such statements must be consistent with the audited statements. In addition, supplementary material (such as Management’s Discussion and Analysis) that is published should also be subjected to sufficient scrutiny (e.g. internal control assessments, etc.) to satisfy the validation issue. If material is not published under a validation regime, for instance in a stand-alone report or as a section on a website, then management should ensure that appropriate verification of the information takes place, in accordance with the general disclosure principle set out below. In the light of the above, Pillar 3 disclosures will not be required to be audited by an external auditor, unless specified.
14.5 Materiality

An AIFI should decide which disclosures are relevant for it based on the materiality concept. Information would be regarded as material if its omission or misstatement could change or influence the assessment or decision of a user relying on that information for the purpose of making economic decisions. This definition is consistent with International Accounting Standards and with the national accounting framework. The Reserve Bank recognises the need for a qualitative judgment of whether, in light of the particular circumstances, a user of financial information would consider the item to be material (user test). The Reserve Bank does not consider it necessary to set specific thresholds for disclosure as the user test is a useful benchmark for achieving sufficient disclosure. However, with a view to facilitate smooth transition to greater disclosures as well as to promote greater comparability among the AIFIs’ Pillar 3 disclosures, the materiality thresholds have been prescribed for certain limited disclosures. Notwithstanding the above, AIFIs are encouraged to apply the user test to these specific disclosures and where considered necessary make disclosures below the specified thresholds also.

14.6 Proprietary and Confidential Information

Proprietary information encompasses information (for example on products or systems) that if shared with competitors would render an AIFI’s investment in these products/systems less valuable, and hence would undermine its competitive position. Information about customers is often confidential, in that it is provided under the terms of a legal agreement or counterparty relationship. This has an impact on what AIFIs should reveal in terms of information about their customer base, as well as details on their internal arrangements, for instance methodologies used, parameter estimates, data etc. The Reserve Bank believes that the requirements set out below strike an appropriate balance between the need for meaningful disclosure and the protection of proprietary and confidential information.

14.7 General Disclosure Principle

AIFIs should have a formal disclosure policy approved by the Board that addresses the AIFI’s approach for determining what disclosures it will make and the internal controls over the disclosure process. In addition, AIFIs should implement a process for assessing the appropriateness of their disclosures, including validation and frequency.

14.8 Implementation Date

The AIFIs shall make their first set of disclosures under Basel III with reference to the position as of June 30, 2022 (September 30, 2022 in case of NHB).

14.9 Scope and Frequency of Disclosures

14.9.1 Pillar 3 applies at the top consolidated level of the group to which the Capital Adequacy Framework applies.

14.9.2 AIFIs are required to make Pillar 3 disclosures at least on a half yearly basis, irrespective of whether financial statements are audited, with the exception of following disclosures:

(i) Table DF-2: Capital Adequacy;
(ii) Table DF-3: Credit Risk: General Disclosures for All AIFIs; and
(iii) Table DF-4: Credit Risk: Disclosures for Portfolios subject to the Standardised Approach.

73 Please refer to Annex 16 for detailed Pillar 3 disclosure templates.
The disclosures as indicated at (i), (ii) and (iii) above will be made at least on a quarterly basis by AIFIs.

14.9.3 All disclosures must either be included in an AIFI’s published financial results / statements or, at a minimum, must be disclosed on AIFI’s website. If an AIFI finds it operationally inconvenient to make these disclosures along with published financial results / statements, the AIFI must provide in these financial results / statements, a direct link to where the Pillar 3 disclosures can be found on the AIFI’s website. The Pillar 3 disclosures should be made concurrent with publication of financial results / statements.

14.9.4 However, AIFIs may note that in the case of main features template (as indicated in paragraph 14.13.7) and provision of the full terms and conditions of capital instruments (as indicated in paragraph 14.13.8), AIFIs are required to update these disclosures concurrently whenever a new capital instrument is issued and included in capital or whenever there is a redemption, conversion / write-down or other material change in the nature of an existing capital instrument.

14.10 Regulatory Disclosure Section

14.10.1 AIFIs are required to make disclosures in the format as specified in Annex 16 of this Chapter. AIFIs have to maintain a ‘Regulatory Disclosures Section’ on their websites, where all the information relating to disclosures will be made available to the market participants. The direct link to this page should be prominently provided on the home page of an AIFI’s website and it should be easily accessible. This requirement is essentially to ensure that the relevance / benefit of Pillar 3 disclosures is not diminished by the challenge of finding the disclosure in the first place.

14.10.2 An archive for at least three years of all templates relating to prior reporting periods should be made available by AIFIs on their websites.

14.11 Pillar 3 under Basel III Framework

14.11.1 The disclosure requirements under Basel III Framework are set out in the form of following templates:

(i) Disclosure Template
A common template which will be used by AIFIs to report the details of their regulatory capital. It is designed to meet the Basel III requirement to disclose all regulatory adjustments. The template enhances consistency and comparability in the disclosure of the elements of capital between AIFIs and across jurisdictions.

(ii) Reconciliation Requirements
In order to meet the reconciliation requirements as envisaged under Basel III, a three-step approach has been devised. This step-by-step approach to reconciliation ensures that the Basel III requirement to provide a full reconciliation of all regulatory capital elements back to the published financial statements is met in a consistent manner.

(iii) Main Features Template
A common template has been designed to capture the main features of all regulatory capital instruments issued by an AIFI at one place. This disclosure requirement is intended to meet the Basel III requirement to provide a description of the main features of capital instruments.

(iv) Other Disclosure Requirements
This disclosure enables AIFIs in meeting the Basel III requirement to provide the full terms and conditions of capital instruments on their websites.
(v) Pillar 3 disclosure requirements also include certain aspects that are not specifically required to compute capital requirements under Pillar 1. It may be noted that beyond disclosure requirements as set forth in these guidelines, AIFIs are responsible for conveying their actual risk profile to market participants. The information AIFIs disclose must be adequate to fulfill this objective. In addition to the specific disclosure requirements as set out in the guidelines, AIFIs should also make additional disclosures in the following areas:

(i) Securitisation exposures in the trading book;
(ii) Sponsorship of off-balance sheet vehicles;
(iii) Valuation with regard to securitisation exposures; and
(iv) Pipeline and warehousing risks with regard to securitisation exposures.

14.12 Disclosure Template

14.12.1 The common template which AIFIs should use is set out in Table DF-11 of Annex 16, along with explanations. The template is designed to capture the capital positions of AIFIs.

14.12.2 It may be noted that AIFIs should not add or delete any rows / columns from the common reporting template. This is essential to ensure that there is no divergence in reporting templates across financial entities falling under the Basel III framework across jurisdictions which could undermine the objectives of consistency and comparability of their regulatory capital.

14.12.3 The Basel Committee has suggested that in cases where the national implementation of Basel III rules applies a more conservative definition of an element (e.g. components and criteria of regulatory capital, regulatory adjustments etc.), national authorities may choose between one of the two approaches listed below for the purpose of disclosure:

Approach 1: In the national version of the template, AIFIs are required to maintain the same definitions of all rows. Further, AIFIs will have to report the impact of the more conservative national definition in the rows exclusively designated for national specific adjustments.

Approach 2: In the national version of the template, AIFIs are required to use the definitions of elements as implemented in that jurisdiction, clearly labelling them as being different from the Basel III minimum definition, and AIFIs are required to separately disclose the impact of each of these different definitions in the notes to the template.

14.12.4 The aim of both the approaches is to provide all the information necessary to enable market participants to calculate the capital of AIFIs on a common basis. In the Indian context, Approach 2 appears to be more practical and less burdensome for AIFIs than the Approach 1. Under the Approach 2, AIFIs have to furnish data based on the definition of capital / regulatory adjustments as implemented in India. The difference with the Basel III minimum can be separately disclosed and explained in notes to the templates. This way of disclosure will be more relevant and comprehensible to a larger number of users of disclosures more specifically, the domestic users. At the same time, information provided in the notes to the templates to indicate differences from Basel III minimum will help facilitate

---

74 As defined in the DBOD No.BP.BC.98/21.06.201/2011-12 dated May 2, 2012 addressed to banks on Guidelines on Implementation of Basel III Capital Regulations in India.
76 As defined in the DBOD No.BP.BC.98/21.06.201/2011-12 dated May 2, 2012 addressed to banks on Guidelines on Implementation of Basel III Capital Regulations in India.
cross-jurisdictional comparison of AIFIs’ capital, should users desire. Accordingly, the disclosure templates have been customised, keeping in view the consistency and comparability of disclosures.

**14.13 Reconciliation Requirements**

**14.13.1** AIFIs will be required to disclose a full reconciliation of all regulatory capital elements back to the balance sheet in the audited (or unaudited) financial statements. This requirement aims to address disconnect, if any, present in an AIFI’s disclosure between the numbers used for the calculation of regulatory capital and the numbers used in the balance sheet.

**14.13.2** AIFIs will have to follow a three step approach to show the link between their balance sheet and the numbers which are used in the composition of capital disclosure template set out in Annex 16 (Table DF-11). The three steps are explained below and also illustrated in Table DF-12 of Annex 16:

Step 1: AIFIs are required to disclose the reported balance sheet under the regulatory scope of consolidation78 (Table DF-12 of Annex 16):

Step 2: AIFIs will have to expand the lines of the balance sheet under regulatory scope of consolidation (Table DF-12 of Annex 16) to display all components which are used in the composition of capital disclosure template (Table DF-11 of Annex 16); and

Step 3: finally, AIFIs will have to map each of the components that are disclosed in Step 2 to the composition of capital disclosure template set out in Table DF-11 of Annex 16.

**14.13.3 Step 1: Disclose the reported balance sheet under the regulatory scope of consolidation**

(i) The scope of consolidation for accounting purposes is often different from that applied for the regulatory purposes. Usually, there will be difference between the financial statements of an AIFI specifically, the AIFI’s balance sheet in published financial statements and the balance sheet considered for the calculation of regulatory capital. Therefore, the reconciliation process involves disclosing how the balance sheet changes when the regulatory scope of consolidation is applied for the purpose of calculation of regulatory capital on a consolidated basis.

(ii) Accordingly, AIFIs are required to disclose the list of the legal entities which have been included within accounting scope of consolidation but excluded from the regulatory scope of consolidation. This is intended to enable market participants and supervisors to investigate the risks posed by unconsolidated entities (e.g. unconsolidated subsidiaries). Similarly, AIFIs are required to list the legal entities which have been included in the regulatory consolidation but not in the accounting scope of consolidation. Finally, it is possible that some entities are included in both the regulatory scope of consolidation and accounting scope of consolidation, but the method of consolidation differs between these two scopes. In such cases, AIFIs are required to list these legal entities and explain the differences in the consolidation methods.

(iii) If the scope of regulatory consolidation and accounting consolidation is identical for a particular group, it would not be required to undertake Step 1. The group would state that

78 Regulatory scope of consolidation is explained in paragraph 3 of this Chapter.
there is no difference between the regulatory consolidation and the accounting consolidation and move to Step 2.

(iv) In addition to the above requirements, AIFIs must disclose for each legal entity, its total balance sheet assets, total balance sheet equity (as stated on the accounting balance sheet of the legal entity), method of consolidation and a description of the principle activities of the entity. These disclosures are required to be made as indicated in the revised templates namely Table DF-1: Scope of Application of Annex 16.

14.13.4 Step 2: Expand the lines of the regulatory balance sheet to display all of the components used in the definition of capital disclosure template (Table DF-11 of Annex 16)

(i) Many of the elements used in the calculation of regulatory capital may not be readily identified from the face of the balance sheet. This requires that AIFIs should expand the rows of the balance sheet under regulatory scope of consolidation such that all the components used in the definition of capital disclosure template (Table DF-11 of Annex 16) are displayed separately.

(ii) For example, paid-up share capital may be reported as one line on the balance sheet. However, some elements of this may meet the requirements for inclusion in Common Equity Tier 1 (CET1) capital and other elements may only meet the requirements for Additional Tier 1 (AT1) or Tier 2 (T2) capital, or may not meet the requirements for inclusion in regulatory capital at all. Therefore, if an AIFI has some amount of paid-up capital which goes into the calculation of CET1 and some amount which goes into the calculation of AT1, it should expand the ‘paid-up share capital’ line of the balance sheet in the following way:

<table>
<thead>
<tr>
<th>Paid-up share capital</th>
<th>Ref</th>
</tr>
</thead>
<tbody>
<tr>
<td>of which amount eligible for CET1</td>
<td>e</td>
</tr>
<tr>
<td>of which amount eligible for AT1</td>
<td>f</td>
</tr>
</tbody>
</table>

(iii) In addition, as illustrated above, each element of the expanded balance sheet must be given a reference number / letter for use in Step 3.

(iv) Another example is regulatory adjustments of the deduction of intangible assets. Firstly, there could be a possibility that the intangible assets may not be readily identifiable in the balance sheet. There is a possibility that the amount on the balance sheet may combine goodwill and other intangibles. Secondly, the amount to be deducted is net of any related deferred tax liability. This deferred tax liability is likely to be reported in combination with other deferred tax liabilities which have no relation to goodwill or intangibles. Therefore, the AIFI should expand the balance sheet in the following way:

<table>
<thead>
<tr>
<th>Goodwill and intangible assets</th>
<th>Ref</th>
</tr>
</thead>
<tbody>
<tr>
<td>of which goodwill</td>
<td>a</td>
</tr>
<tr>
<td>of which other intangibles</td>
<td>b</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Current and deferred tax liabilities (DTLs)</th>
<th>Ref</th>
</tr>
</thead>
<tbody>
<tr>
<td>of which DTLs related to goodwill</td>
<td>c</td>
</tr>
<tr>
<td>of which DTLs related to other intangible assets</td>
<td>d</td>
</tr>
</tbody>
</table>

(v) AIFIs will need to expand elements of the balance sheet only to the extent required to reach the components which are used in the definition of capital disclosure template. For example, if entire paid-up capital of the AIFI met the requirements to be included in CET1, the AIFI would not need to expand this line.
14.13.5 **Step 3: Map each of the components that are disclosed in Step 2 to the composition of capital disclosure templates**

(i) When reporting the disclosure template (i.e. *Table DF-11 of Annex 16*), an AIFI is required to use the reference numbers / letters from Step 2 to show the source of every input.

(ii) For example, if the composition of capital disclosure template (*Table DF-11 of Annex 16*) includes the line ‘goodwill net of related deferred tax liability’, then next to this item the AIFI should put ‘a - c’. This is required to illustrate that how these components of the balance sheet under the regulatory scope of consolidation have been used to calculate this item in the disclosure template.

14.13.6 The three step approach is flexible and offers the following benefits:

(i) the level of disclosure is proportionate, varying with the complexity of the balance sheet of the reporting AIFI (i.e. AIFIs are not subject to a fixed template. An AIFI may skip a step if there is no further information added by that step);

(ii) supervisors and market participants can trace the origin of the elements of the regulatory capital back to their exact location on the balance sheet under the regulatory scope of consolidation; and

(iii) the approach is flexible enough to be used under any accounting standards. AIFIs are required to map all the components of the regulatory capital disclosure templates back to the balance sheet under the regulatory scope of consolidation, regardless of where the accounting standards require the source to be reported on the balance sheet.

14.13.7 **Main Features Template**

14.13.7.1 AIFIs are required to complete a ‘main features template’ to ensure consistency and comparability of disclosures of the main features of capital instruments. AIFIs are required to disclose a description of the main features of capital instruments issued by them. Besides, AIFIs will also be required to make available the full terms and conditions of their capital instruments (paragraph 14.13.8 below). The requirement of separately disclosing main features of capital instruments is intended to provide an overview of the capital structure. Many times, it may not be possible for the users to extract key features of capital instruments with ease from the full disclosure of terms and conditions of capital instruments.

14.13.7.2 This template represents the minimum level of summary disclosure which are required to be reported in respect of each regulatory capital instrument issued. The main feature disclosure template is set out in *Table DF-13 of Annex 16* along with a description of each of the items to be reported. Some of the key aspects of the ‘Main Features Template’ are as under:

(i) it is designed to be completed by AIFIs from when the Basel III capital regulations come into effect.

(ii) AIFIs are required to report each capital instrument (including common shares) in a separate column of the template, such that the completed template would provide a ‘main features report’ that summarises all of the regulatory capital instruments of the group.

14.13.7.3 AIFIs are required to keep the completed main features report up-to-date. AIFIs should ensure that the report is updated and made publicly available, whenever a capital instrument is issued or repaid and whenever there is redemption, conversion / write-down or other material change in the nature of an existing capital instrument.
14.13.8 Other Disclosure Requirements

In addition to the disclosure requirements set out in above paragraphs, AIFIs are required to make the following disclosure in respect of the composition of capital:

(i) Full Terms and Conditions: AIFIs are required to make available on their websites\(^{79}\) the full terms and conditions of all instruments included in regulatory capital. The requirement for AIFIs to make available the full terms and conditions of instruments on their websites will allow supervisors and market participants to investigate the specific features of individual capital instruments.

(ii) AIFIs are required to keep the terms and conditions of all capital instruments up-to-date (Table DF-14 of Annex 16). Whenever there is a change in the terms and conditions of a capital instrument, AIFIs should update them promptly and make publicly available such updated disclosure.

14.14 The Disclosure Templates

All Pillar 3 disclosure templates as set out in these guidelines are furnished in tabular form in Annex 16. Additional relevant definitions and explanations are also provided for the Pillar 3 disclosures.

---

\(^{79}\) Please refer to paragraph 14.10 of this Chapter.
Part D: Capital Conservation Buffer Framework

15. Capital Conservation Buffer

15.1 Objective

15.1.1 The capital conservation buffer (CCB) is designed to ensure that AIFIs build up capital buffers during normal times (i.e. outside periods of stress) which can be drawn down as losses are incurred during a stressed period. The requirement is based on simple capital conservation rules designed to avoid breaches of minimum capital requirements.

15.1.2 Outside the period of stress, AIFIs should hold buffers of capital above the regulatory minimum. When buffers have been drawn down, one way AIFIs should look to rebuild them is through reducing discretionary distributions of earnings. This could include reducing dividend payments, share buybacks and staff bonus payments. AIFIs may also choose to raise new capital from the market as an alternative to conserving internally generated capital. However, if an AIFI decides to make payments in excess of the constraints imposed as explained above, the AIFI, with the prior approval of RBI, would have to use the option of raising capital from the market equal to the amount above the constraint which it wishes to distribute.

15.1.3 In the absence of raising capital from the market, the share of earnings retained by AIFIs for the purpose of rebuilding their capital buffers should increase the nearer their actual capital levels are to the minimum capital requirement. It will not be appropriate for AIFIs which have depleted their capital buffers to use future predictions of recovery as justification for maintaining generous distributions to shareholders, other capital providers and employees. It is also not acceptable for AIFIs which have depleted their capital buffers to try and use the distribution of capital as a way to signal their financial strength. As a consequence, AIFIs in aggregate can end up increasing distributions at the exact point in time when they should be conserving earnings.

15.1.4 The capital conservation buffer can be drawn down only when an AIFI faces a systemic or idiosyncratic stress. An AIFI should not choose in normal times to operate in the buffer range simply to compete with other financial sector entities and win market share. This aspect would be specifically looked into by Reserve Bank of India during the Supervisory Review and Evaluation Process. If, at any time, an AIFI is found to have allowed its capital conservation buffer to fall in normal times, particularly by increasing its risk weighted assets without a commensurate increase in the Common Equity Tier 1 Ratio, this would be viewed seriously. In addition, such an AIFI will be required to bring the buffer to the desired level within a time limit prescribed by Reserve Bank of India. The AIFI which draw down their capital conservation buffer during a stressed period should also have a definite plan to replenish the buffer as part of its Internal Capital Adequacy Assessment Process and strive to bring the buffer to the desired level within a time limit agreed to with Reserve Bank of India during the Supervisory Review and Evaluation Process.

15.1.5 The framework of capital conservation buffer will strengthen the ability of AIFIs to withstand adverse economic environment conditions, will help increase financial sector resilience both going into a downturn, and provide the mechanism for rebuilding capital during the early stages of economic recovery. Thus, by retaining a greater proportion of earnings during a downturn, AIFIs will be able to help ensure that capital remains available

---

to support the ongoing business operations / lending activities during the period of stress. Therefore, this framework is expected to help reduce pro-cyclicality.

15.2 The Framework

15.2.1 AIFIs are required to maintain a capital conservation buffer of 2.5%, comprised of Common Equity Tier 1 capital, above the regulatory minimum capital requirement\(^{81}\) of 9%. Capital distribution constraints will be imposed on an AIFI when capital level falls within this range. However, they will be able to conduct business as normal when their capital levels fall into the conservation range as they experience losses. Therefore, the constraints imposed are related to the distributions only and are not related to the operations of AIFIs. The distribution constraints imposed on AIFIs when their capital levels fall into the range increase as the AIFIs’ capital levels approach the minimum requirements. The Table 24 below shows the minimum capital conservation ratios an AIFI must meet at various levels of the Common Equity Tier 1 capital ratios.

<table>
<thead>
<tr>
<th>CET1 after including current period’s retained earning</th>
<th>Minimum Capital Conservation Ratios (expressed as a % of earnings)</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.5%-6.125%</td>
<td>100%</td>
</tr>
<tr>
<td>&gt;6.125%-6.75%</td>
<td>80%</td>
</tr>
<tr>
<td>&gt;6.75%-7.375%</td>
<td>60%</td>
</tr>
<tr>
<td>&gt;7.375%-8.0%</td>
<td>40%</td>
</tr>
<tr>
<td>&gt;8.0%</td>
<td>0%</td>
</tr>
</tbody>
</table>

For example, an AIFI with a Common Equity Tier 1 capital ratio in the range of 6.125% to 6.75% is required to conserve 80% of its earnings in the subsequent financial year (i.e. payout no more than 20% in terms of dividends, share buybacks and discretionary bonus payments is allowed).

15.2.2 The Common Equity Tier 1 ratio includes amounts used to meet the minimum Common Equity Tier 1 capital requirement of 5.5%, but excludes any additional Common Equity Tier 1 needed to meet the 7% Tier 1 and 9% Total Capital requirements. For example, an AIFI maintains Common Equity Tier 1 capital of 9% and has no Additional Tier 1 or Tier 2 capital. Therefore, the AIFI would meet all minimum capital requirements, but would have a zero conservation buffer and therefore, the AIFI would be subjected to 100% constraint on distributions of capital by way of dividends, share-buybacks and discretionary bonuses.

15.2.3 The following represents other key aspects of the capital conservation buffer requirements:

(i) Elements subject to the restriction on distributions: Dividends and share buybacks, discretionary payments on other Tier 1 capital instruments and discretionary bonus payments to staff would constitute items considered to be distributions. Payments which do

\(^{81}\) Common Equity Tier 1 must first be used to meet the minimum capital requirements (including the 7% Tier 1 and 9% Total capital requirements, if necessary), before the remainder can contribute to the capital conservation buffer requirement.

\(^{82}\) Please refer to circular DBOD.No.BP.BC.102/21.06.201/2013-14 dated March 27, 2014 addressed to banks
not result in depletion of Common Equity Tier 1 capital, (for example certain scrip dividends\textsuperscript{83}) are not considered distributions.

(ii) Definition of earnings: Earnings are defined as distributable profits before the deduction of elements subject to the restriction on distributions mentioned at (i) above. Earnings are calculated after the tax which would have been reported had none of the distributable items been paid. As such, any tax impact of making such distributions are reversed out. If an AIFI does not have positive earnings and has a Common Equity Tier 1 ratio less than 8%, it should not make positive net distributions.

(iii) Solo or consolidated application: Capital conservation buffer is applicable both at the solo level (global position) as well as at the consolidated level, i.e. restrictions would be imposed on distributions at the level of both the solo AIFI and the consolidated group. In all cases where the AIFI is the parent of the group, it would mean that distributions by the AIFI can be made only in accordance with the lower of its Common Equity Tier 1 Ratio at solo level or consolidated level\textsuperscript{84}. For example, if an AIFI’s Common Equity Tier 1 ratio at solo level is 6.8% and that at consolidated level is 7.4%. It will be subject to a capital conservation requirement of 60% consistent with the Common Equity Tier 1 range of >6.75% - 7.375% as per Table 24 in paragraph 15.2.1 above. Suppose, an AIFI’s Common Equity Tier 1 ratio at solo level is 6.6% and that at consolidated level is 6%. It will be subject to a capital conservation requirement of 100% consistent with the Common Equity Tier 1 range of >5.5% - 6.125% as per Table 24 on minimum capital conservation standards for individual AIFI.

\textsuperscript{83} A scrip dividend is a scrip issue made in lieu of a cash dividend. The term ‘scrip dividends’ also includes bonus shares.

\textsuperscript{84} If a subsidiary is a bank, it will naturally be subject to the provisions of capita conservation buffer. If it is not a bank, even then the parent bank should not allow the subsidiary to distribute dividend which are inconsistent with the position of CCB at the consolidated level.
Part E: Leverage Ratio Framework

16. **Leverage Ratio**

16.1 **Rationale and Objective**

An underlying cause of the global financial crisis was the build-up of excessive on- and off-balance sheet leverage in the banking system. In many cases, banks built up excessive leverage while apparently maintaining strong risk-based capital ratios. During the most severe part of the crisis, the banking sector was forced by the market to reduce its leverage in a manner that amplified downward pressure on asset prices. This deleveraging process exacerbated the feedback loop between losses, falling bank capital and contraction in credit availability. Therefore, under Basel III, a simple, transparent, non-risk based leverage ratio has been introduced. The leverage ratio is calibrated to act as a credible supplementary measure to the risk based capital requirements and is intended to achieve the following objectives:

(a) constrain the build-up of leverage in the banking sector to avoid destabilising deleveraging processes which can damage the broader financial system and the economy; and

(b) reinforce the risk-based requirements with a simple, non-risk based “backstop” measure.

16.2 **Definition, Minimum Requirement and Scope of Application of the Leverage Ratio**

**Definition and minimum requirement**

The Basel III leverage ratio is defined as the capital measure (the numerator) divided by the exposure measure (the denominator), with this ratio expressed as a percentage

\[
\text{Leverage Ratio} = \frac{\text{Capital Measure}}{\text{Exposure Measure}}
\]

16.2.1 In the case of AIFIs, the minimum leverage ratio will be 4% from April 1, 2022.

**Scope of consolidation**

16.2.2 The Basel III leverage ratio framework follows the same scope of regulatory consolidation as is used for the risk-based capital framework.

16.2.3 Treatment of investments in the capital of banking, financial, insurance and commercial entities that are outside the regulatory scope of consolidation: in cases where a banking, financial, insurance or commercial entity is outside the scope of regulatory consolidation, only the investment in the capital of such entities (i.e. only the carrying value of the investment, as opposed to the underlying assets and other exposures of the investee) is to be included in the leverage ratio exposure measure. However,

---

investments in the capital of such entities that are deducted from Tier 1 capital (i.e. either
deduction from Common Equity Tier 1 capital or deduction from Additional Tier 1 capital
following corresponding deduction approach) as set out in paragraph 4.4 - Regulatory
Adjustments / Deductions\(^{87}\) of this Chapter on Basel III Capital regulations may be excluded
from the leverage ratio exposure measure.

16.3 Capital Measure
The capital measure for the leverage ratio is the Tier 1 capital of the risk-based capital
framework\(^{88}\), taking into account various regulatory adjustments / deductions and the
transitional arrangements. In other words, the capital measure used for the leverage ratio at
any particular point in time is the Tier 1 capital measure applying at that time under the risk-
based framework.

16.4 Exposure Measure

16.4.1 General Measurement Principles
(i) The exposure measure for the leverage ratio should generally follow the
accounting value, subject to the following:
   - on-balance sheet, non-derivative exposures are included in the exposure
     measure net of specific provisions or accounting valuation adjustments
     (e.g. accounting credit valuation adjustments, e.g. prudent valuation
     adjustments for AFS and HFT positions);
   - netting of loans and deposits is not allowed.
(ii) Unless specified differently below, AIFIs must not take account of physical or
     financial collateral, guarantees or other credit risk mitigation techniques to reduce
     the exposure measure.
(iii) An AIFI's total exposure measure is the sum of the following exposures:
     (a) on-balance sheet exposures;
     (b) derivative exposures;
     (c) securities financing transaction (SFT) exposures; and
     (d) off-balance sheet (OBS) items.

The specific treatments for these four main exposure types are defined in paragraphs 16.4.2
to 16.4.5 below.

16.4.2 On-balance sheet exposures
16.4.2.1 AIFIs must include all balance sheet assets in their exposure measure, including
on-balance sheet derivatives collateral and collateral for SFTs, with the exception of on-
balance sheet derivative and SFT assets that are covered in paragraph 16.4.3 and 16.4.4
below\(^{89}\).

16.4.2.2 However, to ensure consistency, balance sheet assets deducted from Tier 1
capital as set out in paragraph 4.4 - Regulatory Adjustments / Deductions may be deducted
from the exposure measure. Following are the two examples:

\(^{87}\) Regulatory adjustments / deductions as indicated in paragraph 4.4.
\(^{88}\) Tier 1 capital as defined in paragraph 4: Composition of regulatory capital.
\(^{89}\) Where an AIFI according to its operative accounting framework recognises fiduciary assets on the
balance sheet, these assets can be excluded from the leverage ratio exposure measure provided that
the assets meet the IFRS 9 criteria for derecognition and, where applicable, IFRS 10 for
deconsolidation. When disclosing the leverage ratio, AIFIs must also disclose the extent of such de-
recognised fiduciary items as set out in paragraph 16.7.4.
Where a banking, financial or insurance entity is not included in the regulatory scope of consolidation (as set out in paragraph 16.2.3), the amount of any investment in the capital of that entity that is totally or partially deducted from CET1 capital or from Additional Tier 1 capital of the AIFI (in terms of paragraphs 3.3.2 and 4.4.8.2(C) of this Chapter) may also be deducted from the exposure measure.

16.4.2.3 Liability items must not be deducted from the exposure measure. For example, gains/losses on fair valued liabilities or accounting value adjustments on derivative liabilities due to changes in the AIFI’s own credit risk as described in paragraph 4.4.5 must not be deducted from the exposure measure.

16.4.3 Derivative exposures

16.4.3.1 Treatment of derivatives: Derivatives create two types of exposure:

(a) an exposure arising from the underlying of the derivative contract; and

(b) a counterparty credit risk (CCR) exposure.

The leverage ratio framework uses the method set out below to capture both of these exposure types.

16.4.3.2 AIFIs must calculate their derivative exposures\(^90\), including where an AIFI sells protection using a credit derivative, as the replacement cost (RC)\(^91\) for the current exposure plus an add-on for potential future exposure (PFE), as described in paragraph 16.4.3.3 below. If the derivative exposure is covered by an eligible bilateral netting contract as specified in the Annex 17 (part B)\(^92\), an alternative treatment as indicated in paragraph 16.4.3.4 below may be applied\(^93\). Written credit derivatives are subject to an additional treatment, as set out in paragraphs 16.4.3.10 to 16.4.3.12 below.

16.4.3.3 For a single derivative contract, the amount to be included in the exposure measure is determined as follows:

\[
\text{exposure measure} = \text{replacement cost (RC)} + \text{add-on}
\]

\[\text{where:}\]

- \(\text{RC} = \) the replacement cost of the contract (obtained by marking to market), where the contract has a positive value.
- \(\text{add-on} = \) an amount for PFE over the remaining life of the contract calculated by applying an add-on factor to the notional principal amount of the derivative. The add-on factors are given in Table 9 of paragraph 5.15.3.5 and Tables 22 & 23 of paragraph 8.6.3.

\(^90\) This approach makes reference to the Current Exposure Method (CEM) to calculate CCR exposure amounts associated with derivative exposures. AIFIs operating in India may continue to use CEM until advised otherwise by the Reserve Bank.

\(^91\) If, under the relevant accounting standards, there is no accounting measure of exposure for certain derivative instruments because they are held (completely) off-balance sheet, the AIFI must use the sum of positive fair values of these derivatives as the replacement cost.

\(^92\) Currently, relevant only in case of AIFIs’ exposures to Qualifying Central Counterparties (QCCPs) subject to conditions mentioned in paragraph 5.15.3.9. In case of OTC derivatives, please refer to circular_DBOD.No.BP.BC.48/21.06.001/2010-11_dated_October_1_2010 addresses to banks on Prudential Norms for Off-Balance Sheet Exposures of Banks – Bilateral netting of counterparty credit exposures. As indicated therein, bilateral netting of mark-to-market (MTM) values arising on account of derivative contracts is not permitted.

\(^93\) These netting rules are with the exception of cross-product netting i.e. cross-product netting is not permitted in determining the leverage ratio exposure measure.
16.4.3.4 **Bilateral netting:** when an eligible bilateral netting contract is in place as specified in paragraph 5.15.3.9(i) and Annex 17 (part B), the RC for the set of derivative exposures covered by the contract will be the sum of net replacement cost and the add-on factors as described in paragraph 16.4.3.3 above.

16.4.3.5 **Treatment of related collateral:** collateral received in connection with derivative contracts has two countervailing effects on leverage:

- it reduces counterparty exposure; but
- it can also increase the economic resources at the disposal of the AIFI, as the AIFI can use the collateral to leverage itself.

16.4.3.6 Collateral received in connection with derivative contracts does not necessarily reduce the leverage inherent in an AIFI’s derivatives position, which is generally the case if the settlement exposure arising from the underlying derivative contract is not reduced. As a general rule, collateral received may not be netted against derivative exposures whether or not netting is permitted under the AIFI’s operative accounting or risk-based framework. Therefore, it is advised that when calculating the exposure amount by applying paragraphs 16.4.3.2 to 16.4.3.4 above, an AIFI must not reduce the exposure amount by any collateral received from the counterparty.

16.4.3.7 Similarly, with regard to collateral provided, AIFIs must gross up their exposure measure by the amount of any derivatives collateral provided where the effect of providing collateral has reduced the value of their balance sheet assets under their operative accounting framework.

16.4.3.8 **Treatment of cash variation margin:** in the treatment of derivative exposures for the purpose of the leverage ratio, the cash portion of variation margin exchanged between counterparties may be viewed as a form of pre-settlement payment, if the following conditions are met:

(i) For trades not cleared through a qualifying central counterparty (QCCP), the cash received by the recipient counterparty is not segregated.

(ii) Variation margin is calculated and exchanged on a daily basis based on mark-to-market valuation of derivatives positions.

(iii) The cash variation margin is received in the same currency as the currency of settlement of the derivative contract.

(iv) Variation margin exchanged is the full amount that would be necessary to fully extinguish the mark-to-market exposure of the derivative subject to the threshold and minimum transfer amounts applicable to the counterparty.

---

94 A QCCP is as defined in the paragraph 5.15.3.3.
95 Cash variation margin would satisfy the non-segregation criterion if the recipient counterparty has no restrictions on the ability to use the cash received (i.e. the cash variation margin received is used as its own cash). Further, this criterion would be met if the cash received by the recipient counterparty is not required to be segregated by law, regulation, or any agreement with the counterparty.
96 To meet this criterion, derivative positions must be valued daily and cash variation margin must be transferred daily to the counterparty or to the counterparty’s account, as appropriate.
97 For this paragraph, currency of settlement means any currency of settlement specified in the derivative contract, governing qualifying master netting agreement (MNA), or the credit support annex (CSA) to the qualifying MNA.
98 Cash variation margin exchanged on the morning of the subsequent trading day based on the previous, end-of-day market values would meet this criterion, provided that the variation margin...
(v) Derivatives transactions and variation margins are covered by a single master netting agreement (MNA)\textsuperscript{99,100} between the legal entities that are the counterparties in the derivatives transaction. The MNA must explicitly stipulate that the counterparties agree to settle net any payment obligations covered by such a netting agreement, taking into account any variation margin received or provided if a credit event occurs involving either counterparty. The MNA must be legally enforceable and effective\textsuperscript{101} in all relevant jurisdictions, including in the event of default and bankruptcy or insolvency.

16.4.3.9 If the conditions in paragraph 16.4.3.8 are met, the cash portion of variation margin received may be used to reduce the replacement cost portion of the leverage ratio exposure measure, and the receivables assets from cash variation margin provided may be deducted from the leverage ratio exposure measure as follows:

- In the case of cash variation margin received, the receiving AIFI may reduce the replacement cost (but not the add-on portion) of the exposure amount of the derivative asset by the amount of cash received if the positive mark-to-market value of the derivative contract(s) has not already been reduced by the same amount of cash variation margin received under the AIFI’s operative accounting standard.

- In the case of cash variation margin provided to a counterparty, the posting AIFI may deduct the resulting receivable from its leverage ratio exposure measure, where the cash variation margin has been recognised as an asset under the AIFI’s operative accounting framework.

Cash variation margin may not be used to reduce the PFE amount.

16.4.3.10 Additional treatment for written credit derivatives: in addition to the CCR exposure arising from the fair value of the contracts, written credit derivatives create a notional credit exposure arising from the creditworthiness of the reference entity. It is therefore appropriate to treat written credit derivatives consistently with cash instruments (e.g. loans, bonds) for the purposes of the exposure measure.

16.4.3.11 In order to capture the credit exposure to the underlying reference entity, in addition to the above CCR treatment for derivatives and related collateral, the effective notional amount\textsuperscript{102} referenced by a written credit derivative is to be included in the exposure measure. The effective notional amount of a written credit derivative may be reduced by any negative change in fair value amount that has been incorporated into the calculation of Tier 1 capital with respect to the written credit derivative\textsuperscript{103}. The resulting amount may be further exchanged is the full amount that would be necessary to fully extinguish the mark-to-market exposure of the derivative subject to applicable threshold and minimum transfer amounts.

\textsuperscript{99} A Master MNA may be deemed to be a single MNA for this purpose.

\textsuperscript{100} To the extent that the criteria in this paragraph include the term “master netting agreement”, this term should be read as including any “netting agreement” that provides legally enforceable rights of offsets. This is to take account of the fact that no standardisation has currently emerged for netting agreements employed by CCPs.

\textsuperscript{101} A master netting agreement (MNA) is deemed to meet this criterion if it satisfies the conditions as specified in paragraph 5.15.3.9(i) and Annex 17 (part B).

\textsuperscript{102} The effective notional amount is obtained by adjusting the notional amount to reflect the true exposure of contracts that are leveraged or otherwise enhanced by the structure of the transaction.

\textsuperscript{103} A negative change in fair value is meant to refer to a negative fair value of a credit derivative that is recognised in Tier 1 capital. This treatment is consistent with the rationale that the effective notional amounts included in the exposure measure may be capped at the level of the maximum potential loss, which means the maximum potential loss at the reporting date is the notional amount of the credit derivative minus any negative fair value that has already reduced Tier 1 capital. For example, if a written credit derivative had a positive fair value of 20 on one date and has a negative fair value of
reduced by the effective notional amount of a purchased credit derivative on the same reference name provided:

- the credit protection purchased is on a reference obligation which ranks pari passu with or is junior to the underlying reference obligation of the written credit derivative in the case of single name credit derivatives; and
- the remaining maturity of the credit protection purchased is equal to or greater than the remaining maturity of the written credit derivative.

16.4.3.12 Since written credit derivatives are included in the exposure measure at their effective notional amounts, and are also subject to add-on amounts for PFE, the exposure measure for written credit derivatives may be overstated. AIFIs may therefore choose to deduct the individual PFE add-on amount relating to a written credit derivative (which is not offset according to paragraph 16.4.3.11 and whose effective notional amount is included in the exposure measure) from their gross add-on in paragraphs 16.4.3.2 to 16.4.3.4.

16.4 Securities financing transaction exposures

16.4.4.1 SFTs are included in the exposure measure according to the treatment described in the following paragraphs. The treatment recognises that secured lending and borrowing in the form of SFTs is an important source of leverage, and ensures consistent international implementation by providing a common measure for dealing with the main differences in the operative accounting frameworks.

16.4.4.2 General treatment (AIFI acting as principal): the sum of the amounts in sub-paragraphs (A) and (B) below are to be included in the leverage ratio exposure measure:

(A) Gross SFT assets recognised for accounting purposes (i.e. with no recognition of accounting netting), adjusted as follows:

10 on a subsequent reporting date, the effective notional amount of the credit derivative may be reduced by 10. The effective notional amount cannot be reduced by 30. However, if at the subsequent reporting date the credit derivative has a positive fair value of 5, the effective notional amount cannot be reduced at all.

104 Two reference names are considered identical only if they refer to the same legal entity. For single-name credit derivatives, protection purchased that references a subordinated position may offset protection sold on a more senior position of the same reference entity as long as a credit event on the senior reference asset would result in a credit event on the subordinated reference asset.

105 The effective notional amount of a written credit derivative may be reduced by any negative change in fair value reflected in the AIFI’s Tier 1 capital provided the effective notional amount of the offsetting purchased credit protection is also reduced by any resulting positive change in fair value reflected in Tier 1 capital.

106 For tranching products if applicable, the purchased protection must be on a reference obligation with the same level of seniority.

107 The PFE add-on may be set to zero in order to avoid the double-counting described in this paragraph.

108 SFTs are transactions such as repurchase agreements, reverse repurchase agreements, security lending and borrowing, and margin lending transactions, where the value of the transactions depends on market valuations and the transactions are often subject to margin agreements.

109 For SFT assets subject to novation and cleared through QCCPs, “gross SFT assets recognised for accounting purposes” are replaced by the final contractual exposure, given that pre-existing contracts have been replaced by new legal obligations through the novation process.

110 Gross SFT assets recognised for accounting purposes must not recognise any accounting netting of cash payables against cash receivables (e.g. as currently permitted under the IFRS and US GAAP accounting frameworks). This regulatory treatment has the benefit of avoiding inconsistencies from netting which may arise across different accounting regimes.
(i) excluding from the exposure measure the value of any securities received under an SFT, where the AIFI has recognised the securities as an asset on its balance sheet;\(^{111}\) and

(ii) cash payables and cash receivables in SFTs with the same counterparty may be measured net if all the following criteria are met:

(a) Transactions have the same explicit final settlement date;

(b) The right to set off the amount owed to the counterparty with the amount owed by the counterparty is legally enforceable both currently in the normal course of business and in the event of: (i) default; (ii) insolvency; and (iii) bankruptcy; and

(c) The counterparties intend to settle net, settle simultaneously, or the transactions are subject to a settlement mechanism that results in the functional equivalent of net settlement, that is, the cash flows of the transactions are equivalent, in effect, to a single net amount on the settlement date. To achieve such equivalence, both transactions are settled through the same settlement system and the settlement arrangements are supported by cash and/or intraday credit facilities intended to ensure that settlement of both transactions will occur by the end of the business day and the linkages to collateral flows do not result in the unwinding of net cash settlement\(^ {112,113} \).

(B) A measure of CCR calculated as the current exposure without an add-on for PFE, calculated as follows:

(i) Where a qualifying MNA\(^ {114} \) is in place, the current exposure (\(E^*\)) is the greater of zero and the total fair value of securities and cash lent to a counterparty for all transactions included in the qualifying MNA (\(\sum E_i\)), less the total fair value of cash and securities received from the counterparty for those transactions (\(\sum C_i\)). This is illustrated in the following formula:

\[
E^* = \max \{0, [\sum E_i - \sum C_i]\}
\]

(ii) Where no qualifying MNA is in place, the current exposure for transactions with a counterparty must be calculated on a transaction by transaction basis: that is, each

\(^{111}\) This may apply, for example, under US GAAP where securities received under an SFT may be recognised as assets if the recipient has the right to rehypothecate but has not done so.

\(^{112}\) This latter condition ensures that any issues arising from the securities leg of the SFTs do not interfere with the completion of the net settlement of the cash receivables and payables.

\(^{113}\) To achieve functional equivalence, all transactions must be settled through the same settlement mechanism. The failure of any single securities transaction in the settlement mechanism should delay settlement of only the matching cash leg or create an obligation to the settlement mechanism, supported by an associated credit facility. Further, if there is a failure of the securities leg of a transaction in such a mechanism at the end of the window for settlement in the settlement mechanism, then this transaction and its matching cash leg must be split out from the netting set and treated gross for the purposes of the Basel III leverage ratio exposure measure. Specifically, the criteria in this paragraph are not intended to preclude a Delivery-versus-Payment (DVP) settlement mechanism or other type of settlement mechanism, provided that the settlement mechanism meets the functional requirements set out in this paragraph. For example, a settlement mechanism may meet these functional requirements if any failed transaction (that is, the securities that failed to transfer and the related cash receivable or payable) can be re-entered in the settlement mechanism until they are settled.

\(^{114}\) A “qualifying” MNA is one that meets the requirements under paragraph 5.15.3.9 (exposures to QCCPs) and Annex 17 part A.
transaction is treated as its own netting set, as shown in the following formula:

\[ E_i^* = \max \{0, [E_i - C_i]\} \]

16.4.4.3 **Sale accounting transactions:** leverage may remain with the lender of the security in an SFT whether or not sale accounting is achieved under the operative accounting framework. As such, where sale accounting is achieved for an SFT under the AIFI's operative accounting framework, the AIFI must reverse all sales-related accounting entries, and then calculate its exposure as if the SFT had been treated as a financing transaction under the operative accounting framework (i.e. the AIFI must include the sum of amounts in sub-paragraphs (A) and (B) of paragraph 16.4.4.2 for such an SFT) for the purposes of determining its exposure measure.

16.4.4.4 **AIFI acting as agent:** an AIFI acting as agent in an SFT generally provides an indemnity or guarantee to only one of the two parties involved, and only for the difference between the value of the security or cash its customer has lent and the value of collateral the borrower has provided. In this situation, the AIFI is exposed to the counterparty of its customer for the difference in values rather than to the full exposure to the underlying security or cash of the transaction (as is the case where the AIFI is one of the principals in the transaction). Where the AIFI does not own/control the underlying cash or security resource, that resource cannot be leveraged by the AIFI.

16.4.4.5 Where an AIFI acting as agent in an SFT provides an indemnity or guarantee to a customer or counterparty for any difference between the value of the security or cash the customer has lent and the value of collateral the borrower has provided, then the AIFI will be required to calculate its exposure measure by applying only subparagraph (B) of paragraph 16.4.4.2

16.4.4.6 An AIFI acting as agent in an SFT and providing an indemnity or guarantee to a customer or counterparty will be considered eligible for the exceptional treatment set out in paragraph 16.4.4.5 only if the AIFI's exposure to the transaction is limited to the guaranteed difference between the value of the security or cash its customer has lent and the value of the collateral the borrower has provided. In situations where the AIFI is further economically exposed (i.e. beyond the guarantee for the difference) to the underlying security or cash in the transaction, a further exposure equal to the full amount of the security or cash must be included in the exposure measure.

16.4.4.7 An illustrative example of exposure measure for SFT transactions are furnished in Annex 12.

16.4.5 Off-balance sheet items

16.4.5.1 This paragraph explains the treatment of off-balance sheet (OBS) items into the leverage ratio exposure measure. OBS items include commitments (including liquidity facilities), whether or not unconditionally cancellable, direct credit substitutes, acceptances, standby letters of credit, trade letters of credit, etc.

16.4.5.2 In the risk-based capital framework, OBS items are converted under the

---

115 Where, in addition to the conditions in paragraphs 16.4.4.4 to 16.4.4.6, an AIFI acting as an agent in an SFT does not provide an indemnity or guarantee to any of the involved parties, the AIFI is not exposed to the SFT and therefore need not recognise those SFTs in its exposure measure.

116 For example, due to the AIFI managing collateral received in the AIFI's name or on its own account rather than on the customer’s or borrower's account (e.g. by on-lending or managing unsegregated collateral, cash or securities).
standardised approach into credit exposure equivalents through the use of credit conversion factors (CCFs)\textsuperscript{117}. For the purpose of determining the exposure amount of OBS items for the leverage ratio, the CCFs set out in the following paragraphs must be applied to the notional amount\textsuperscript{118}.

(i) Commitments other than securitisation liquidity facilities with an original maturity up to one year and commitments with an original maturity over one year will receive a CCF of 20\% and 50\%, respectively. However, any commitments that are unconditionally cancellable at any time by the AIFI without prior notice, or that effectively provide for automatic cancellation due to deterioration in a borrower’s creditworthiness, will receive a 10\% CCF.

(ii) Direct credit substitutes, e.g. general guarantees of indebtedness (including standby letters of credit serving as financial guarantees for loans and securities) and acceptances (including endorsements with the character of acceptances) will receive a CCF of 100\%.

(iii) Forward asset purchases, forward deposits and partly paid shares and securities, which represent commitments with certain drawdown, will receive a CCF of 100\%.

(iv) Certain transaction-related contingent items (e.g. performance bonds, bid bonds, warranties and standby letters of credit related to particular transactions) will receive a CCF of 50\%.

(v) Note issuance facilities (NIFs) and revolving underwriting facilities (RUFs) will receive a CCF of 50\%.

(vi) For short-term self-liquidating trade letters of credit arising from the movement of goods (e.g. documentary credits collateralised by the underlying shipment), a 20\% CCF will be applied to both issuing and confirming AIFIs.

(vii) Where there is an undertaking to provide a commitment on an OBS item, AIFIs should apply the lower of the two applicable CCFs.

(viii) All off-balance sheet securitisation exposures will receive a CCF of 100\% conversion factor. All eligible liquidity facilities will receive a CCF of 50\%.

16.5 Disclosure requirements

16.5.1 AIFIs are required to publicly disclose their Basel III leverage ratio on a consolidated basis and also report their leverage ratio to the RBI (Department of Supervision) along with detailed calculations of capital and exposure measures on a quarterly basis.

16.5.2 To enable market participants to reconcile leverage ratio disclosures with AIFIs’ published financial statements from period to period, and to compare the capital adequacy of AIFIs, it is important that AIFIs adopt a consistent and common disclosure of the main components of the leverage ratio, while also reconciling these

\textsuperscript{117} Please refer to paragraph 5.15.1.

\textsuperscript{118} These correspond to the CCFs of the standardised approach for credit risk under paragraph 5.15.2 (including Table 8), subject to a floor of 10\%. The floor of 10\% will affect commitments that are unconditionally cancellable at any time by the AIFI without prior notice, or that effectively provide for automatic cancellation due to deterioration in a borrower’s creditworthiness. These may receive a 0\% CCF under the risk-based capital framework. For any OBS item not specifically mentioned under paragraph 16.4.5.2, the applicable CCF for that item will be as indicated in the paragraph 5.15.2 above.
disclosures with their published financial statements.

16.5.3 To facilitate consistency and ease of use of disclosures relating to the composition of the leverage ratio, and to mitigate the risk of inconsistent formats undermining the objective of enhanced disclosure, AIFIs should publish their leverage ratio according to a common set of templates.

16.5.4 The public disclosure requirements include:

- a **summary comparison table** that provides a comparison of AIFIs’ total accounting assets amounts and leverage ratio exposures;
- a **common disclosure template** that provides a breakdown of the main leverage ratio regulatory elements;
- a **reconciliation requirement** that details the source(s) of material differences between AIFIs’ total balance sheet assets in their financial statements and on-balance sheet exposures in the common disclosure template; and
- **other disclosures** as set out below.

16.5.5 **Implementation date, frequency and location of disclosure**

16.5.5.1 AIFIs are required to make disclosure of the leverage ratio and its components from the date of publication of their first set of financial statements / results on or after April 1, 2022 (July 1, 2022 for NHB). Accordingly, the first such disclosure should be made for the quarter ending June 30, 2022 (September 30, 2022 for NHB).

16.5.5.2 With the exception of the mandatory quarterly frequency requirement in paragraph 16.5.3 below, detailed disclosures required according to paragraphs 16.6 must be made by AIFIs, irrespective of whether financial statements are audited, at least on a half yearly basis (i.e. as on September 30 and March 31 of a financial year), along with other Pillar 3 disclosures as required in terms of paragraph 14.9.

16.5.5.3 As the leverage ratio is an important supplementary measure to the risk-based capital requirements, the same Pillar 3 disclosure requirement also applies to the leverage ratio. Therefore, AIFIs, at a minimum, must disclose the following three items on a quarterly basis, irrespective of whether financial statements are audited:

(i) Tier 1 capital (as per paragraph 16.3);
(ii) Exposure measure (as per paragraph 16.4); and
(iii) Leverage ratio (as per paragraph 16.2).

At a minimum, these disclosures should be made on a quarter-end basis (i.e. as on June 30, September 30, December 31 and March 31 of a financial year), along with the figures of the prior three quarter-ends.

16.5.5.4 The location of leverage ratio disclosures should be as stipulated for Pillar 3 disclosures in terms of paragraphs 14.9.3 and 14.10. However, specific to leverage ratio disclosures, AIFIs have to make available on their websites, an ongoing archive of all reconciliation templates, disclosure templates and explanatory tables relating to prior reporting periods, instead of an archive for at least three years as required in case of Pillar 3 disclosures.

16.6 **Disclosure templates**

The summary comparison table (Table: DF-16), common disclosure template (Table: DF-17) and explanatory table, qualitative reconciliation and other requirements are set out in
the Annex 16: Pillar 3 disclosure requirements. Together, these ensure transparency between the values used for the calculation of the Basel III leverage ratio and the values used in AIFIs' published financial statements.
Part F: Countercyclical Capital Buffer Framework

17. Countercyclical Capital Buffer

17.1 Objective

The aim of the Countercyclical Capital Buffer (CCCB) regime is twofold. Firstly, it requires AIFIs to build up a buffer of capital in good times which may be used to maintain flow of credit to the real sector in difficult times. Secondly, it achieves the broader macro-prudential goal of restricting the financial sector from indiscriminate lending in the periods of excess credit growth that have often been associated with the building up of system-wide risk.

17.2 The Framework

17.2.1 The CCCB may be maintained in the form of Common Equity Tier 1 (CET 1) capital only, and the amount of the CCCB may vary from 0 to 2.5% of total risk weighted assets (RWA) of the AIFIs. If, as per the Reserve Bank of India directives, AIFIs are required to hold CCCB at a given point in time, the same may be disclosed at table DF-11 of Annex 16.

17.2.2 The CCCB decision would normally be pre-announced with a lead time of 4 quarters. However, depending on the CCCB indicators, the AIFIs may be advised to build up requisite buffer in a shorter span of time.

17.2.3 The credit-to-GDP gap\(^{119}\) shall be the main indicator in the CCCB framework in India. However, it shall not be the only reference point and shall be used in conjunction with GNPA growth. The Reserve Bank of India shall also look at other supplementary indicators for CCCB decision such as incremental C-D ratio for a moving period of three years (along with its correlation with credit-to-GDP gap and GNPA growth), Industry Outlook (IO) assessment index (along with its correlation with GNPA growth) and interest coverage ratio (along with its correlation with credit-to-GDP gap). While taking the final decision on CCCB, the Reserve Bank of India may use its discretion to use all or some of the indicators along with the credit-to-GDP gap.

17.2.4 The CCCB framework shall have two thresholds, viz., lower threshold and upper threshold, with respect to credit-to-GDP gap.

a. The lower threshold (L) of the credit-to-GDP gap where the CCCB is activated shall be set at 3 percentage points, provided its relationship with GNPA remains significant. The buffer activation decision will also depend upon other supplementary indicators as detailed in paragraph 4.

b. The upper threshold (H) where the CCCB reaches its maximum shall be kept at 15 percentage points of the credit-to-GDP gap. Once the upper threshold of the credit-to-GDP gap is reached, the CCCB shall remain at its maximum value of 2.5 per cent of RWA, till the time a withdrawal is signalled by the Reserve Bank of India.

c. In between 3 and 15 percentage points of credit-to-GDP gap, the CCCB shall increase gradually from 0 to 2.5 per cent of the RWA of the AIFI but the rate of increase would be different based on the level/position\(^{120}\) of credit-to-GDP gap between 3 and 15

---

\(^{119}\) Credit-to-GDP gap is the difference between credit-to-GDP ratio and the long term trend value of credit-to-GDP ratio at any point in time.

\(^{120}\) The CCCB requirement shall increase linearly from 0 to 20 basis points when credit-to-GDP gap moves from 3 to 7 percentage points. Similarly, for above 7 and up to 11 percentage points range of
percentage points. If the credit-to-GDP gap is below 3 percentage points then there will not be any CCCB requirement.

17.2.5 The same set of indicators that are used for activating CCCB (as mentioned in paragraph 4) may be used to arrive at the decision for the release phase of the CCCB. However, discretion shall be with the Reserve Bank of India for operating the release phase of CCCB. Further, the entire CCCB accumulated may be released at a single point in time but the use of the same by AIFIs will not be unfettered and will need to be decided only after discussion with the Reserve Bank of India.

17.2.6 For all AIFIs, CCCB shall be maintained on a solo basis as well as on consolidated basis.

17.2.7 All AIFIs should maintain capital for Indian operations under CCCB framework based on their exposures in India.

17.2.8 AIFIs having international presence have to maintain adequate capital under CCCB as prescribed by the host supervisors in respective jurisdictions. The AIFIs, based on the geographic location of their private sector credit exposures (including non-bank financial sector exposures), shall calculate their AIFI specific CCCB requirement as a weighted average of the requirements that are being applied in respective jurisdictions. The Reserve Bank of India may also ask AIFIs to keep excess capital under CCCB framework for exposures in any of the host countries they are operating if it feels the CCCB requirement in host country is not adequate.

17.2.9 AIFIs must ensure that their CCCB requirements are calculated and publicly disclosed with at least the same frequency as their minimum capital requirements as applicable in various jurisdictions. The buffer should be based on the latest relevant jurisdictional CCCB requirements that are applicable on the date that they calculate their minimum capital requirement. In addition, when disclosing their buffer requirement, AIFIs must also disclose the geographic breakdown of their private sector credit exposures used in the calculation of the buffer requirement.

17.3 The CCCB decisions may form a part of the first bi-monthly monetary policy statement of the Reserve Bank of India for the year. However, more frequent communications in this regard may be made by the Reserve Bank of India, if warranted by changes in economic conditions.

17.4 The indicators and thresholds for CCCB decisions mentioned above shall be subject to continuous review and empirical testing for their usefulness and other indicators may also be used by the Reserve Bank of India to support CCCB decisions.

credit-to-GDP gap, CCCB requirement shall increase linearly from above 20 to 90 basis points. Finally, for above 11 and up to 15 percentage points range of credit-to-GDP gap, the CCCB requirement shall increase linearly from above 90 to 250 basis points. However, if the credit-to-GDP gap exceeds 15 percentage points, the buffer shall remain at 2.5 per cent of the RWA.

121 Weight = ([AIFI’s total credit risk charge that relates to private sector credit exposures in that jurisdiction/ AIFI’s total credit risk charge that relates to private sector credit exposures across all jurisdictions], where credit includes all private sector credit exposures that attract a credit risk capital charge or the risk weighted equivalent trading book capital charges for specific risk, Incremental Risk Charge (IRC) and securitisation.)
Annex 1
[cf. para 4.2.3.1]

Criteria for Classification as Common Shares (Paid-up Equity Capital) for Regulatory
Purposes – AIFIs

1. Represents the most subordinated claim in liquidation of the AIFI.

2. Entitled to a claim on the residual assets which is proportional to its share of paid up
capital, after all senior claims have been repaid in liquidation (i.e. has an unlimited
and variable claim, not a fixed or capped claim).

3. Principal is perpetual and never repaid outside of liquidation (except discretionary
repurchases / buy backs or other means of effectively reducing capital in a
discretionary manner that is allowable under relevant law as well as guidelines, if
any, issued by RBI in the matter).

4. The AIFI does nothing to create an expectation at issuance that the instrument will be
bought back, redeemed or cancelled nor do the statutory or contractual terms provide
any feature which might give rise to such an expectation.

5. Distributions are paid out of distributable items. The level of distributions is not in any
way tied or linked to the amount paid up at issuance and is not subject to a
contractual cap (except to the extent that an AIFI is unable to pay distributions that
exceed the level of distributable items). As regards ‘distributable items’, it is clarified
that the dividend on common shares will be paid out of current year’s profit only.

6. There are no circumstances under which the distributions are obligatory. Non-
payment is therefore not an event of default.

7. Distributions are paid only after all legal and contractual obligations have been met
and payments on more senior capital instruments have been made. This means that
there are no preferential distributions, including in respect of other elements
classified as the highest quality issued capital.

8. It is the paid up capital that takes the first and proportionately greatest share of any
losses as they occur\textsuperscript{122}. Within the highest quality capital, each instrument absorbs
losses on a going concern basis proportionately and pari passu with all the others.

9. The paid up amount is classified as equity capital (i.e. not recognised as a liability) for
determining balance sheet insolvency.

10. The paid up amount is classified as equity under the relevant accounting standards.

11. It is directly issued and paid up and the AIFI cannot directly or indirectly have funded
the purchase of the instrument\textsuperscript{123}. AIFIs should also not extend loans against their
own shares.

\textsuperscript{122} In cases where capital instruments have a permanent write-down feature, this criterion is still
deemed to be met by common shares.
12. The paid up amount is neither secured nor covered by a guarantee of the issuer or related entity\(^\text{124}\) nor subject to any other arrangement that legally or economically enhances the seniority of the claim.

13. Paid up capital is only issued with the approval of the owners of the issuing AIFI, either given directly by the owners or, if permitted by applicable law, given by the Board or by other persons duly authorised by the owners.

14. Paid up capital is clearly and separately disclosed in the AIFI’s balance sheet.

\(^{124}\) A related entity can include a parent company, a sister company, a subsidiary or any other affiliate. A holding company is a related entity irrespective of whether it forms part of the consolidated AIFI.
Criteria for Inclusion of Perpetual Non-cumulative Preference Shares (PNCPS) in Additional Tier 1 Capital

The PNCPS will be issued subject to extant legal provisions only in Indian rupees and should meet the following terms and conditions to qualify for inclusion in Additional Tier 1 Capital for capital adequacy purposes:

1. Terms of Issue of Instruments

1.1 Paid up Status
The instruments should be issued by the AIFI (i.e. not by any ‘SPV’ etc. set up by the AIFI for this purpose) and fully paid up.

1.2 Amount
The amount of PNCPS to be raised may be decided by the Board of AIFIs.

1.3 Limits
While complying with minimum Tier 1 of 7% of risk weighted assets, an AIFI cannot admit, Perpetual Non-Cumulative Preference Shares (PNCPS) together with Perpetual Debt Instruments (PDI) in Additional Tier 1 Capital, more than 1.5% of risk weighted assets. However, once this minimum total Tier 1 capital has been complied with, any additional PNCPS and PDI issued by the AIFI can be included in Total Tier 1 capital reported. Excess PNCPS and PDI can be reckoned to comply with Tier 2 capital if the latter is less than 2% of RWAs i.e. while complying with minimum Total Capital of 9% of risk weighted assets.

1.4 Maturity Period
The PNCPS shall be perpetual i.e. there is no maturity date and there are no step-ups or other incentives to redeem.

1.5 Rate of Dividend
The rate of dividend payable to the investors may be either a fixed rate or a floating rate referenced to a market determined rupee interest benchmark rate.

1.6 Optionality
PNCPS shall not be issued with a ‘put option’. However, AIFIs may issue the instruments with a call option at a particular date subject to following conditions:

(a) The call option on the instrument is permissible after the instrument has run for at least five years;

(b) To exercise a call option an AIFI must receive prior approval of RBI (Department of Regulation); and

(c) An AIFI must not do anything which creates an expectation that the call will be exercised.\textsuperscript{125} For example, to preclude such expectation of the instrument

\textsuperscript{125} If an AIFI were to call a capital instrument and replace it with an instrument that is more costly
being called, the dividend / coupon reset date need not be co-terminus with the call date. AIFIs may, at their discretion, consider having an appropriate gap between dividend / coupon reset date and call date; and

(d) AIFIs must not exercise a call unless:

(i) They replace the called instrument with capital of the same or better quality and the replacement of this capital is done at conditions which are sustainable for the income capacity of the AIFI\(^{126}\); or

(ii) The AIFI demonstrates that its capital position is well above the minimum capital requirements after the call option is exercised.\(^{127}\)

The use of tax event and regulatory event calls may be permitted. However, exercise of the calls on account of these events is subject to the requirements set out in points (b) to (d) of criterion 1.6. RBI will permit the AIFI to exercise the call only if the RBI is convinced that the AIFI was not in a position to anticipate these events at the time of issuance of PNCPS.

To illustrate, if there is a change in tax treatment which makes the capital instrument with tax deductible coupons into an instrument with non-tax deductible coupons, then the AIFI would have the option (not obligation) to repurchase the instrument. In such a situation, an AIFI may be allowed to replace the capital instrument with another capital instrument that perhaps does have tax deductible coupons. Similarly, if there is a downgrade of the instrument in regulatory classification (e.g. if it is decided by the RBI to exclude an instrument from regulatory capital) the AIFI has the option to call the instrument and replace it with an instrument with a better regulatory classification, or a lower coupon with the same regulatory classification with prior approval of RBI. However, AIFIs may not create an expectation / signal an early redemption / maturity of the regulatory capital instrument.

1.7 Repurchase / Buy-back / Redemption

(i) Principal of the instruments may be repaid (e.g. through repurchase or redemption) only with prior approval of RBI and AIFIs should not assume or create market expectations that supervisory approval will be given (this repurchase / buy-back / redemption of the principal is in a situation other than in the event of exercise of call option by the AIFI. One of the major differences is that in the case of the former, the option to offer the instrument for repayment on announcement of the decision to repurchase / buy-back / redeem the instrument, would lie with the investors whereas, in case of the latter, it lies with the AIFI).

(ii) AIFIs may repurchase / buy-back / redeem the instruments only if:

(a) They replace such instrument with capital of the same or better quality and the replacement of this capital is done at conditions which are sustainable for the income capacity of the AIFI; or

(b) The AIFI demonstrates that its capital position is well above the minimum capital requirements after the repurchase / buy-back / redemption.

\(^{126}\) Replacement issues can be concurrent with but not after the instrument is called.

\(^{127}\) Here, minimum refers to Common Equity Tier 1 of 8% of RWAs (including capital conservation buffer of 2.5% of RWAs) and Total Capital of 11.5% of RWAs including any additional capital requirement identified under Pillar 2.
1.8 Dividend Discretion

(i) The AIFI must have full discretion at all times to cancel distributions/payments;\textsuperscript{128}

(ii) Cancellation of discretionary payments must not be an event of default;

(iii) AIFIs must have full access to cancelled payments to meet obligations as they fall due;

(iv) Cancellation of distributions/payments must not impose restrictions on the AIFI except in relation to distributions to common stakeholders; and

(v) Dividends must be paid out of distributable items. As regards ‘distributable items’, it is clarified that the dividend on perpetual non-cumulative preference shares (PNCPS) will be paid out of current year’s profit only.

(vii) The dividend shall not be cumulative. i.e., dividend missed in a year will not be paid in future years, even if adequate profit is available and the level of CRAR conforms to the regulatory minimum. When dividend is paid at a rate lesser than the prescribed rate, the unpaid amount will not be paid in future years, even if adequate profit is available and the level of CRAR conforms to the regulatory minimum.

(viii) The instrument cannot have a credit sensitive coupon feature, i.e. a dividend that is reset periodically based in whole or in part on the AIFI’s credit standing. For this purpose, any reference rate including a broad index which is sensitive to changes to the AIFI’s own creditworthiness and / or to changes in the credit worthiness of the wider financial sector will be treated as a credit sensitive reference rate. AIFIs desirous of offering floating reference rate may take prior approval of the RBI (DOR) as regard permissibility of such reference rates.

(ix) In general, it may be in order for AIFIs to have dividend stopper arrangement that stop dividend payments on common shares in the event the holders of AT1 instruments are not paid dividend/coupon. However, dividend stoppers must not impede the full discretion that AIFI must have at all times to cancel distributions/payments on the Additional Tier 1 instrument, nor must they act in a way that could hinder the recapitalisation of the AIFI. For example, it would not be permitted for a stopper on an Additional Tier 1 instrument to:

- attempt to stop payment on another instrument where the payments on this other instrument were not also fully discretionary;

- prevent distributions to shareholders for a period that extends beyond the point in time that dividends/coupons on the Additional Tier 1 instrument are resumed;

- impede the normal operation of the AIFI or any restructuring activity (including acquisitions/disposals).

A stopper may act to prohibit actions that are equivalent to the payment of a dividend, such as the AIFI undertaking discretionary share buybacks, if otherwise permitted.

\textsuperscript{128} Consequence of full discretion at all times to cancel distributions / payments is that “dividend pushers” are prohibited. An instrument with a dividend pusher obliges the issuing AIFI to make a dividend/coupon payment on the instrument if it has made a payment on another (typically more junior) capital instrument or share. This obligation is inconsistent with the requirement for full discretion at all times. Furthermore, the term “cancel distributions/payments” means extinguish these payments. It does not permit features that require the AIFI to make distributions/payments in kind.
1.9 Treatment in Insolvency

The instrument cannot contribute to liabilities exceeding assets if such a balance sheet test forms part of a requirement to prove insolvency under any law or otherwise.

1.10 Loss Absorption Features

PNCPS should have principal loss absorption through either (i) conversion to common shares at an objective pre-specified trigger point or (ii) a write-down mechanism which allocates losses to the instrument at a pre-specified trigger point. The write-down will have the following effects:

(a) Reduce the claim of the instrument in liquidation;
(b) Reduce the amount re-paid when a call is exercised; and
(c) Partially or fully reduce dividend payments on the instrument.

Various criteria for loss absorption through conversion / write-down / write-off on breach of pre-specified trigger and at the point of non-viability are furnished in Annex 14.

1.11 Prohibition on Purchase / Funding of PNCPS

Neither the AIFI nor a related party over which the AIFI exercises control or significant influence (as defined under relevant Accounting Standards) should purchase PNCPS, nor can the AIFI directly or indirectly should fund the purchase of the instrument. AIFI should also not grant advances against the security of PNCPS issued by them.

1.12 Re-capitalisation

The instrument cannot have any features that hinder re-capitalisation, such as provisions which require the issuer to compensate investors if a new instrument is issued at a lower price during a specified time frame.

1.13 Reporting of Non-payment of Dividends

All instances of non-payment of dividends should be notified by the issuing AIFI to the Chief General Managers-in-Charge of Department of Regulation and Department of Supervision of the Reserve Bank of India, Mumbai.

1.14 Seniority of Claim

The claims of the investors in instruments shall be

(i) Superior to the claims of investors in equity shares;
(ii) Subordinated to the claims of PDIs, all Tier 2 regulatory capital instruments, depositors and general creditors of the AIFI; and
(iii) is neither secured nor covered by a guarantee of the issuer nor related entity or other arrangement that legally or economically enhances the seniority of the claim vis-à-vis AIFI creditors.

1.15 Investment in Instruments Raised in Indian Rupees by Foreign Entities/ NRIs

(i) Investment by FIIs and NRIs shall be within an overall limit of 49% and 24% of the issue respectively, subject to the investment by each FII not exceeding 10% of the issue, and investment by each NRI not exceeding 5% of the issue. Investment by FIIs in these instruments shall be outside the ECB limit for rupee-denominated corporate debt, as fixed by Government of India from time to time. The overall non-resident
holding of Preference Shares and equity shares in AIFIs will be subject to the statutory / regulatory limit.

(ii) AIFIs should comply with the terms and conditions, if any, stipulated by SEBI / other regulatory authorities in regard to issue of the instruments.

1.16 Reporting of Issuances

(i) AIFIs issuing PNCPS shall submit a report to the Chief General Manager-in-charge, Department of Regulation, Central Office, Reserve Bank of India, Mumbai giving details of the debt raised as per the format prescribed below duly certified by the compliance officer of the AIFI.

(ii) The issue-wise details of amount raised as PNCPS qualifying for Additional Tier 1 capital by the AIFIs from FIIs / NRIs are required to be reported within 30 days of the issue to the Chief General Manager, Reserve Bank of India, Foreign Exchange Department, Foreign Investment Division, Central Office, Mumbai in the proforma given at the end of this Annex. The details of the secondary market sales / purchases by FIIs and the NRIs in these instruments on the floor of the stock exchange shall be reported by the custodians and designated banks, respectively, to the Reserve Bank of India through the soft copy of the LEC Returns, on a daily basis, as prescribed in Schedule 2 and 3 of the FEMA Notification No.20 dated 3rd May 2000, as amended from time to time.

1.17 Investment in Additional Tier 1 Capital Instruments (PNCPS) Issued by Banks/ Other AIFIs

(i) An AIFI’s investment in PNCPS issued by other banks and AIFIs will be reckoned along with the investment in other instruments eligible for capital status while computing compliance with the overall ceiling of 10% of investing AIFI’s capital funds.

(ii) AIFI’s investments in PNCPS issued by banks / other AIFIs will attract risk weight as provided in paragraphs 5.6 and 8.3.5 of this Chapter, whichever applicable for capital adequacy purposes.

(iii) An AIFI’s investments in the PNCPS of other banks will be treated as exposure to capital market and be reckoned for the purpose of compliance with the prudential ceiling for capital market exposure as fixed by RBI.

1.18 Classification in the Balance Sheet

PNCPS will be classified as capital and shown under ‘Schedule of Capital’ of the Balance sheet.
1.19 **PNCPS to Retail Investors**

With a view to enhancing investor education relating to risk characteristics of regulatory capital requirements, AIFIs issuing PNCPS to retail investors, subject to approval of their Board, should adhere to the following conditions:

(a) The requirement for specific sign-off as quoted below, from the investors for having understood the features and risks of the instrument may be incorporated in the common application form of the proposed issue.

> "By making this application, I / We acknowledge that I / We have understood the terms and conditions of the Issue of [insert the name of the instruments being issued] of [Name of The AIFI] as disclosed in the Draft Shelf Prospectus, Shelf Prospectus and Tranche Document”.

(b) All the publicity material, application form and other communication with the investor should clearly state in bold letters (with font size 14) how PNCPS is different from common shares. In addition, the loss absorbency features of the instrument should be clearly explained and the investor’s sign-off for having understood these features and other terms and conditions of the instrument should be obtained.

**Reporting Format**

Details of Investments by FIIs and NRIs in Perpetual Non-Cumulative Preference Shares qualifying as Additional Tier 1 capital

(a) Name of the AIFI:

(b) Total issue size / amount raised (in Rupees):

(c) Date of issue:

<table>
<thead>
<tr>
<th>No of FIIs</th>

Seal of the AIFI
Criteria for Inclusion of Perpetual Debt Instruments (PDI) in Additional Tier 1 Capital

The Perpetual Debt Instruments that may be issued as bonds or debentures by AIFIs should meet the following terms and conditions to qualify for inclusion in Additional Tier 1 Capital for capital adequacy purposes:

1. Terms of Issue of Instruments Denominated in Indian Rupees

1.1 Paid-in Status
The instruments should be issued by the AIFI (i.e. not by any ‘SPV’ etc. set up by the AIFI for this purpose) and fully paid-in.

1.2 Amount
The amount of PDI to be raised may be decided by the Board of AIFIs.

1.3 Limits
While complying with minimum Tier 1 of 7% of risk weighted assets, an AIFI cannot admit, Perpetual Debt Instruments (PDI) together with Perpetual Non-Cumulative Preference Shares (PNCPs) in Additional Tier 1 Capital, more than 1.5% of risk weighted assets. However, once this minimum total Tier 1 capital has been complied with, any additional PNCPs and PDI issued by the AIFI can be included in Total Tier 1 capital reported. Excess PNCPs and PDI can be reckoned to comply with Tier 2 capital if the latter is less than 2% of RWAs i.e. while complying with minimum Total Capital of 9% of risk weighted assets.

1.4 Maturity Period
The PDIs shall be perpetual i.e. there is no maturity date and there are no step-ups or other incentives to redeem.

1.5 Rate of Interest
The interest payable to the investors may be either at a fixed rate or at a floating rate referenced to a market determined rupee interest benchmark rate.

1.6 Optionality
PDIs shall not have any ‘put option’. However, AIFIs may issue the instruments with a call option at a particular date subject to following conditions:

   a. The call option on the instrument is permissible after the instrument has run for at least five years;

   b. To exercise a call option an AIFI must receive prior approval of RBI (Department of Regulation);

   c. An AIFI must not do anything which creates an expectation that the call will be exercised. For example, to preclude such expectation of the instrument being called, the dividend / coupon reset date need not be co-terminus with the call date. AIFIs may, at their discretion, consider having an appropriate gap between dividend / coupon reset date and call date; and

   d. AIFIs must not exercise a call unless:
They replace the called instrument with capital of the same or better quality and the replacement of this capital is done at conditions which are sustainable for the income capacity of the AIFI\[130]\; or

(ii) The AIFI demonstrates that its capital position is well above the minimum capital requirements after the call option is exercised.\[131]\n
The use of tax event and regulatory event calls may be permitted. However, exercise of the calls on account of these events is subject to the requirements set out in points (b) to (d) of criterion 1.6. RBI will permit the AIFI to exercise the call only if the RBI is convinced that the AIFI was not in a position to anticipate these events at the time of issuance of PDIs.

To illustrate, if there is a change in tax treatment which makes the capital instrument with tax deductible coupons into an instrument with non-tax deductible coupons, then the AIFI would have the option (not obligation) to repurchase the instrument. In such a situation, an AIFI may be allowed to replace the capital instrument with another capital instrument that perhaps does have tax deductible coupons. Similarly, if there is a downgrade of the instrument in regulatory classification (e.g. if it is decided by the RBI to exclude an instrument from regulatory capital) the AIFI has the option to call the instrument and replace it with an instrument with a better regulatory classification, or a lower coupon with the same regulatory classification with prior approval of RBI. However, AIFIs may not create an expectation / signal an early redemption / maturity of the regulatory capital instrument.

1.7 Repurchase / Buy-back / Redemption

(i) Principal of the instruments may be repaid (e.g. through repurchase or redemption) only with prior approval of RBI and AIFIs should not assume or create market expectations that supervisory approval will be given (this repurchase / buy-back/redemption of the principal is in a situation other than in the event of exercise of call option by the AIFI. One of the major differences is that in the case of the former, the option to offer the instrument for repayment on announcement of the decision to repurchase / buy-back/redeem the instrument, would lie with the investors whereas, in case of the latter, it lies with the AIFI).

(ii) AIFIs may repurchase / buy-back / redemption only if:

(a) They replace the such instrument with capital of the same or better quality and the replacement of this capital is done at conditions which are sustainable for the income capacity of the AIFI; or

(b) The AIFI demonstrates that its capital position is well above the minimum capital requirements after the repurchase / buy-back / redemption.

1.8 Coupon Discretion

(a) The AIFI must have full discretion at all times to cancel distributions/payments\[132]\n
\[130\] Replacement issues can be concurrent with but not after the instrument is called.

\[131\] Minimum refers to Common Equity Tier 1 of 8% of RWAs (including capital conservation buffer of 2.5% of RWAs) and Total capital of 11.5% of RWAs including additional capital requirements identified under Pillar 2.

\[132\] Consequence of full discretion at all times to cancel distributions/payments is that “dividend pushers” are prohibited. An instrument with a dividend pusher obliges the issuing AIFI to make a dividend/coupon payment on the instrument if it has made a payment on another (typically more junior) capital instrument or share. This obligation is inconsistent with the requirement for full discretion at all times. Furthermore, the term “cancel distributions/payments” means extinguish these
Cancellation of discretionary payments must not be an event of default

AIFIs must have full access to cancelled payments to meet obligations as they fall due

Cancellation of distributions/payments must not impose restrictions on the AIFI except in relation to distributions to common stakeholders.

Coupons must be paid out of ‘distributable items’. In this context, coupon may be paid out of current year profits. However, if current year profits are not sufficient, coupon may be paid subject to availability of:

(i) Profits brought forward from previous years, and/or

(ii) Reserves representing appropriation of net profits, including statutory reserves, and excluding share premium, revaluation reserve, foreign currency translation reserve, investment reserve and reserves created on amalgamation.

The accumulated losses and deferred revenue expenditure, if any, shall be netted off from (i) and (ii) to arrive at the available balances for payment of coupon.

If the aggregate of: (a) profits in the current year; (b) profits brought forward from the previous years and (c) permissible reserves as at (ii) above, excluding statutory reserves, net of accumulated losses and deferred revenue expenditure are less than the amount of coupon, only then the AIFI shall make appropriation from the statutory reserves. In such cases, AIFIs are required to report to the Reserve Bank within twenty-one days from the date of such appropriation.

However, payment of coupons on PDIs from the reserves is subject to the issuing AIFI meeting minimum regulatory requirements for CET1, Tier 1 and Total Capital ratios including the additional capital requirements for Domestic Systemically Important Banks at all times and subject to the restrictions under the capital buffer frameworks.

In order to meet the eligibility criteria for perpetual debt instruments, AIFIs must ensure and indicate in their offer documents that they have full discretion at all times to cancel distributions / payments.

AIFIs must ensure and indicate in the offer document that they have full discretion at all times to cancel distributions / payments in order to meet the eligibility criteria for perpetual debt instruments.

The interest shall not be cumulative.

The instrument cannot have a credit sensitive coupon feature, i.e. a dividend that is reset periodically based in whole or in part on the AIFIs’ credit standing. For this purpose, any reference rate including a broad index which is sensitive to changes to the AIFI’s own creditworthiness and / or to changes in the credit worthiness of the wider financial sector will be treated as a credit sensitive reference rate. AIFIs desirous of offering floating reference rate may take prior approval of the RBI (DOR) as regards permissibility of such reference rates.

Payments. It does not permit features that require the AIFI to make distributions/payments in kind.
In general, it may be in order for AIFIs to have dividend stopper arrangement that stop dividend payments on common shares in the event the holders of AT1 instruments are not paid dividend/coupon. However, dividend stoppers must not impede the full discretion that AIFI must have at all times to cancel distributions/payments on the Additional Tier 1 instrument, nor must they act in a way that could hinder the re-capitalisation of the AIFI. For example, it would not be permitted for a stopper on an Additional Tier 1 instrument to:

- attempt to stop payment on another instrument where the payments on this other instrument were not also fully discretionary;
- prevent distributions to shareholders for a period that extends beyond the point in time that dividends/coupons on the Additional Tier 1 instrument are resumed;
- impede the normal operation of the AIFI or any restructuring activity (including acquisitions/disposals).

A stopper may act to prohibit actions that are equivalent to the payment of a dividend, such as the AIFI undertaking discretionary share buybacks, if otherwise permitted.

1.9 Treatment in Insolvency
The instrument cannot contribute to liabilities exceeding assets if such a balance sheet test forms part of a requirement to prove insolvency under any law or otherwise.

1.10 Loss Absorption Features
PDIs may be classified as liabilities for accounting purposes (not for the purpose of insolvency as indicated in paragraph 1.9 above). In such cases, these instruments must have principal loss absorption through either (i) conversion to common shares at an objective pre-specified trigger point or (ii) a write-down mechanism which allocates losses to the instrument at a pre-specified trigger point. The write-down will have the following effects:

(a) Reduce the claim of the instrument in liquidation;
(b) Reduce the amount re-paid when a call is exercised; and
(c) Partially or fully reduce coupon payments on the instrument.

Various criteria for loss absorption through conversion / write-down / write-off on breach of pre-specified trigger and at the point of non-viability are furnished in Annex 14.

1.11 Prohibition on Purchase / Funding of Instruments
Neither the AIFI nor a related party over which the AIFI exercises control or significant influence (as defined under relevant Accounting Standards) should purchase the instrument, nor can the AIFI directly or indirectly fund the purchase of the instrument. AIFIs should also not grant advances against the security of the debt instruments issued by them.

1.12 Re-capitalisation
The instrument cannot have any features that hinder re-capitalisation, such as provisions which require the issuer to compensate investors if a new instrument is issued at a lower price during a specified time frame.

1.13 Reporting of Non-payment of Coupons
All instances of non-payment of coupon should be notified by the issuing AIFIs to the Chief General Managers-in-Charge of Department of Regulation and Department of Supervision of
the Reserve Bank of India, Mumbai.

1.14 Seniority of Claim
The claims of the investors in instruments shall be
(i) superior to the claims of investors in equity shares and perpetual non-cumulative preference shares;
(ii) subordinated to the claims of depositors, general creditors and subordinated debt of the AIFI;
(iii) is neither secured nor covered by a guarantee of the issuer nor related entity or other arrangement that legally or economically enhances the seniority of the claim vis-à-vis AIFI creditors.

1.15 Investment in Instruments Raised in Indian Rupees by Foreign Entities/NRIs
(i) Investment by FIIs in instruments raised in Indian Rupees shall be outside the ECB limit for rupee denominated corporate debt, as fixed by the Govt. of India from time to time, for investment by FIIs in corporate debt instruments. Investment in these instruments by FIIs and NRIs shall be within an overall limit of 49% and 24% of the issue, respectively, subject to the investment by each FII not exceeding 10% of the issue and investment by each NRI not exceeding 5% of the issue.
(ii) AIFIs should comply with the terms and conditions, if any, stipulated by SEBI / other regulatory authorities in regard to issue of the instruments.

1.16 Terms of Issue of Instruments Denominated in Foreign Currency
AIFIs may augment their capital funds through the issue of PDIs in foreign currency without seeking the prior approval of the Reserve Bank of India, subject to compliance with the requirements mentioned below:
(i) Instruments issued in foreign currency should comply with all terms and conditions as applicable to the instruments issued in Indian Rupees.
(ii) Not more than 49% of the eligible amount can be issued in foreign currency.133
(iii) Instruments issued in foreign currency shall be outside the existing limit for foreign currency borrowings by Authorised Dealers, stipulated in terms of FMRD Master Direction No. 1/2016-17 dated July 5, 2016 on Risk Management and Inter-Bank Dealings as updated from time to time.

1.17 Reporting of Issuances
AIFIs issuing PDIs shall submit a report to the Chief General Manager-in-charge, Department of Regulation, Reserve Bank of India, Mumbai giving details of the debt raised as per the format prescribed below duly certified by the compliance officer of the AIFI.

### 1.18 Investment in Additional Tier 1 Debt Capital Instruments (PDIs) Issued by other AIFIs/Banks

(i) An AIFI's investment in debt instruments issued by banks and other AIFIs will be reckoned along with the investment in other instruments eligible for capital status while computing compliance with the overall ceiling of 10% for cross holding of capital among banks/AIFIs prescribed under Exposure Norms applicable to AIFIs and also subject to cross holding limits.

(ii) An AIFI's investment in debt instruments issued by banks will attract risk weight for capital adequacy purposes, as prescribed in paragraphs 5.6 and 8.3.5 of this Chapter, whichever applicable.

### 1.19 Classification in the Balance Sheet

The amount raised by way of issue of debt capital instrument may be classified under ‘Schedule of Borrowings’ in the Balance Sheet. 134

### 1.20 Perpetual Debt Instruments to Retail Investors 135

With a view to enhancing investor education relating to risk characteristics of regulatory capital requirements, AIFIs issuing Perpetual Debt Instruments to retail investors, subject to approval of their Board, should adhere to the following conditions:

(a) For floating rate instruments, AIFIs should not use its Fixed Deposit rate as benchmark.

(b) The requirement for specific sign-off as quoted below, from the investors for having understood the features and risks of the instrument may be incorporated in the common application form of the proposed debt issue.

"By making this application, I / We acknowledge that I / We have understood the terms and conditions of the Issue of [insert the name of the instruments being issued] of [Name of The AIFI] as disclosed in the Draft Shelf Prospectus, Shelf Prospectus and Tranche Document.”

(c) All the publicity material, application form and other communication with the investor should clearly state in bold letters (with font size 14) how a Perpetual Debt Instrument is different from fixed deposit particularly that it is not covered by deposit insurance. In addition, the loss absorbency features of the instrument should be clearly explained and the investor’s sign-off for having understood these features and other terms and conditions of the instrument should be obtained.

---

135 Please refer to circular DBOD.BP.BC.38/21.06.201/2014-15 dated September 1, 2014 addressed to banks on Implementation of Basel III Capital Regulations in India – Amendments.
Annex 4
(cf. para 4.2.5)

Criteria for Inclusion of Debt Capital Instruments as Tier 2 Capital

The Tier 2 debt capital instruments that may be issued as bonds / debentures by AIFIs should meet the following terms and conditions to qualify for inclusion as Tier 2 Capital for capital adequacy purposes:

1. Terms of Issue of Instruments Denominated in Indian Rupees

1.1 Paid-in Status

The instruments should be issued by the AIFI (i.e. not by any ‘SPV’ etc. set up by the AIFI for this purpose) and fully paid-in.

1.2 Amount

The amount of these debt instruments to be raised may be decided by the Board of AIFIs.

1.3 Maturity Period

The debt instruments should have a minimum maturity of five years and there are no step-ups or other incentives to redeem.

1.4 Discount

The debt instruments shall be subjected to a progressive discount for capital adequacy purposes. As they approach maturity these instruments should be subjected to progressive discount as indicated in the table below for being eligible for inclusion in Tier 2 capital.

<table>
<thead>
<tr>
<th>Remaining Maturity of Instruments</th>
<th>Rate of Discount (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than one year</td>
<td>100</td>
</tr>
<tr>
<td>One year and more but less than two years</td>
<td>80</td>
</tr>
<tr>
<td>Two years and more but less than three years</td>
<td>60</td>
</tr>
<tr>
<td>Three years and more but less than four years</td>
<td>40</td>
</tr>
<tr>
<td>Four years and more but less than five years</td>
<td>20</td>
</tr>
</tbody>
</table>

1.5 Rate of Interest

(i) The interest payable to the investors may be either at a fixed rate or at a floating rate referenced to a market determined rupee interest benchmark rate.

(ii) The instrument cannot have a credit sensitive coupon feature, i.e. a coupon that is reset periodically based in whole or in part on the AIFIs’ credit standing. AIFIs desirous of offering floating reference rate may take prior approval of the RBI (DOR) as regards permissibility of such reference rates.

1.6 Optionality

The debt instruments shall not have any ‘put option’. However, it may be callable at the initiative of the issuer only after a minimum of five years:

---

136 The criteria relating to loss absorbency through conversion / write-down / write-off at the point of non-viability are furnished in Annex 14.
(a) To exercise a call option an AIFI must receive prior approval of RBI (Department of Regulation); and

(b) An AIFI must not do anything which creates an expectation that the call will be exercised. For example, to preclude such expectation of the instrument being called, the dividend / coupon reset date need not be co-terminus with the call date. AIFIs may, at their discretion, consider having an appropriate gap between dividend / coupon reset date and call date; and

(c) AIFIs must not exercise a call unless:

   (i) They replace the called instrument with capital of the same or better quality and the replacement of this capital is done at conditions which are sustainable for the income capacity of the AIFI; or

   (ii) The AIFI demonstrates that its capital position is well above the minimum capital requirements after the call option is exercised.

The use of tax event and regulatory event calls may be permitted. However, exercise of the calls on account of these events is subject to the requirements set out in points (a) to (c) of criterion 1.6. RBI will permit the AIFI to exercise the call only if the RBI is convinced that the AIFI was not in a position to anticipate these events at the time of issuance of these instruments as explained in case of Additional Tier 1 instruments.

1.7 Treatment in Bankruptcy / Liquidation

The investor must have no rights to accelerate the repayment of future scheduled payments (coupon or principal) except in bankruptcy and liquidation.

1.8 Prohibition on Purchase / Funding of Instruments

Neither the AIFI nor a related party over which the AIFI exercises control or significant influence (as defined under relevant Accounting Standards) should purchase the instrument, nor can the AIFI directly or indirectly should fund the purchase of the instrument. AIFIs should also not grant advances against the security of the debt instruments issued by them.

1.9 Reporting of Non-payment of Coupons

All instances of non-payment of coupon should be notified by the issuing AIFIs to the Chief General Managers-in-Charge of Department of Regulation and Department of Supervision of the Reserve Bank of India, Mumbai.

1.10 Seniority of Claim

The claims of the investors in instruments shall be

   (i) senior to the claims of investors in instruments eligible for inclusion in Tier 1 capital;

   (ii) subordinate to the claims of all depositors and general creditors of the AIFI; and

137 Replacement issues can be concurrent with but not after the instrument is called.

138 Minimum refers to Common Equity ratio of 8% of RWAs (including capital conservation buffer of 2.5% of RWAs) and Total capital ratio of 11.5% of RWAs including any additional capital requirement identified under Pillar 2.
(iii) is neither secured nor covered by a guarantee of the issuer or related entity or other arrangement that legally or economically enhances the seniority of the claim vis-à-vis AIFI creditors.

1.11 Investment in Instruments Raised in Indian Rupees by Foreign Entities/NRIs

(i) Investment by FIIs in Tier 2 instruments raised in Indian Rupees shall be outside the limit for investment in corporate debt instruments, as fixed by the Govt. of India from time to time. However, investment by FIIs in these instruments will be subject to a separate ceiling of USD 500 million. In addition, NRIs shall also be eligible to invest in these instruments as per existing policy.

(ii) AIFIs should comply with the terms and conditions, if any, stipulated by SEBI / other regulatory authorities in regard to issue of the instruments.

1.12 Terms of Issue of Tier 2 Debt Capital Instruments in Foreign Currency

AIFIs may issue Tier 2 Debt Instruments in Foreign Currency without seeking the prior approval of the Reserve Bank of India, subject to compliance with the requirements mentioned below:

(i) Tier 2 Instruments issued in foreign currency should comply with all terms and conditions applicable to instruments issued in Indian Rupees.

(ii) The total outstanding amount of Tier 2 Instruments in foreign currency shall not exceed 25% of the unimpaired Tier 1 capital. This eligible amount will be computed with reference to the amount of Tier 1 capital as on March 31 of the previous financial year, after deduction of goodwill and other intangible assets but before the deduction of investments, as per paragraph 4.4.8 of this Chapter.

(iii) This will be in addition to the existing limit for foreign currency borrowings by Authorised Dealers stipulated in terms of FMRD Master Direction No. 1/2016-17 dated July 5, 2016 on Risk Management and Inter-Bank Dealings as updated from time to time.

1.13 Reporting of Issuances

AIFIs issuing debt instruments shall submit a report to the Chief General Manager-in-Charge, Department of Regulation, Central Office, Reserve Bank of India, Mumbai giving details of the debt raised as per the format prescribed below duly certified by the compliance officer of the AIFI.

1.14 **Investment in Tier 2 Debt Capital Instruments Issued by other AIFIs/ Banks/**

(i) An AIFI's investment in Tier 2 debt instruments issued by banks and other AIFIs will be reckoned along with the investment in other instruments eligible for capital status while computing compliance with the overall ceiling of 10% for cross holding of capital among banks/FIs prescribed under Exposure Norms applicable to AIFIs and also subject to cross holding limits.

(ii) AIFI's investments in Tier 2 instruments issued by banks/ other AIFIs will attract risk weight as per paragraphs 5.6 and 8.3.5 of this Chapter, whichever applicable for capital adequacy purposes.

1.15 **Classification in the Balance Sheet**

The amount raised by way of issue of Tier 2 debt capital instrument may be classified under 'Schedule 4 – Borrowings' in the Balance Sheet.

1.16 **Debt Capital Instruments to Retail Investors**

With a view to enhancing investor education relating to risk characteristics of regulatory capital requirements, AIFIs issuing subordinated debt to retail investors, subject to approval of their Board, should adhere to the following conditions:

(a) For floating rate instruments, AIFIs should not use its Fixed Deposit rate as benchmark.

(b) The requirement for specific sign-off as quoted below, from the investors for having understood the features and risks of the instrument may be incorporated in the common application form of the proposed debt issue.

"By making this application, I / We acknowledge that I/We have understood the terms and conditions of the Issue of [insert the name of the instruments being issued ] of [Name of The AIFI ] as disclosed in the Draft Shelf Prospectus, Shelf Prospectus and Tranche Document ".

---

141 Please also refer to [circular DBOD.BP.BC.No.72/21.01.002/2012-13 dated January 24, 2013](#) addressed to banks on 'Retail Issue of Subordinated Debt for Raising Tier 2 Capital', in terms of which banks were advised that with a view to deepening the corporate bond market in India through enhanced retail participation, banks, while issuing subordinated debt for raising Tier 2 capital, are encouraged to consider the option of raising such funds through public issue to retail investors. However, while doing so AIFIs are advised to adhere to the conditions prescribed in circular dated January 13, 2010 addressed to banks so as to ensure that the investor is aware of the risk characteristics of regulatory capital instruments.
(c) All the publicity material, application form and other communication with the investor should clearly state in bold letters (with font size 14) how a subordinated bond is different from fixed deposit particularly that it is not covered by deposit insurance. In addition, the loss absorbency features of the instrument should be clearly explained and the investor’s sign-off for having understood these features and other terms and conditions of the instrument should be obtained.
Criteria for Inclusion of Perpetual Cumulative Preference Shares (PCPS)/ Redeemable Non-Cumulative Preference Shares (RNCPS) / Redeemable Cumulative Preference Shares (RCPS) as Part of Tier 2 Capital

1 Terms of Issue of Instruments\textsuperscript{142}

1.1 Paid-in Status

The instruments should be issued by the AIFI (i.e. not by any ‘SPV’ etc. set up by the AIFI for this purpose) and fully paid-in.

1.2 Amount

The amount to be raised may be decided by the Board of AIFIs.

1.3 Maturity Period

These instruments could be either perpetual (PCPS) or dated (RNCPS and RCPS) instruments with a fixed maturity of minimum five years and there should be no step-ups or other incentives to redeem. The perpetual instruments shall be cumulative. The dated instruments could be cumulative or non-cumulative.

1.4 Amortisation

The Redeemable Preference Shares (both cumulative and non-cumulative) shall be subjected to a progressive discount for capital adequacy purposes over the last five years of their tenor, as they approach maturity as indicated in the table below for being eligible for inclusion in Tier 2 capital.

<table>
<thead>
<tr>

<td>40</td>
</tr>
<tr>
<td>Four years and more but less than five years</td>
<td>20</td>
</tr>
</tbody>
</table>

1.5 Coupon

The coupon payable to the investors may be either at a fixed rate or at a floating rate referenced to a market determined rupee interest benchmark rate. AIFIs desirous of offering floating reference rate may take prior approval of the RBI (DOR) as regards permissibility of such reference rates.

1.6 Optionality

These instruments shall not be issued with a 'put option'. However, AIFIs may issue the instruments with a call option at a particular date subject to following conditions:

---
\textsuperscript{142} The criteria relating to loss absorbency through conversion / write-down / write-off at the point of non-viability are furnished in Annex 14.
(a) The call option on the instrument is permissible after the instrument has run for at least five years; and

(b) To exercise a call option an AIFI must receive prior approval of RBI (Department of Regulation); and

(c) An AIFI must not do anything which creates an expectation that the call will be exercised. For example, to preclude such expectation of the instrument being called, the dividend / coupon reset date need not be co-terminus with the call date. AIFIs may, at their discretion, consider having an appropriate gap between dividend / coupon reset date and call date; and

(d) AIFIs must not exercise a call unless:

(i) They replace the called instrument with capital of the same or better quality and the replacement of this capital is done at conditions which are sustainable for the income capacity of the AIFI; or

(ii) The AIFI demonstrates that its capital position is well above the minimum capital requirements after the call option is exercised.\textsuperscript{144}

The use of tax event and regulatory event calls may be permitted. However, exercise of the calls on account of these events is subject to the requirements set out in points (b) to (d) of criterion 1.6. RBI will permit the AIFI to exercise the call only if the RBI is convinced that the AIFI was not in a position to anticipate these events at the time of issuance of these instruments as explained in case of Additional Tier 1 instruments.

1.7 Treatment in Bankruptcy / Liquidation

The investor must have no rights to accelerate the repayment of future scheduled payments (coupon or principal) except in bankruptcy and liquidation.

1.8 Prohibition on Purchase / Funding

Neither the AIFI nor a related party over which the AIFI exercises control or significant influence (as defined under relevant Accounting Standards) should purchase these instruments, nor can the AIFI directly or indirectly should fund the purchase of the instrument. AIFIs should also not grant advances against the security of these instruments issued by them.

1.9 Reporting of Non-payment of Coupon

All instances of non-payment of coupon should be notified by the issuing AIFIs to the Chief General Managers-in-Charge of Department of Regulation and Department of Supervision of the Reserve Bank of India, Mumbai.

1.10 Seniority of Claim

The claims of the investors in instruments shall be:

(i) senior to the claims of investors in instruments eligible for inclusion in Tier 1 capital;

(ii) subordinate to the claims of all depositors and general creditors of the AIFI; and

(iii) is neither secured nor covered by a guarantee of the issuer or related entity or other arrangement that legally or economically enhances the seniority of the claim vis-à-vis AIFI creditors.

\textsuperscript{143} Replacement issues can be concurrent with but not after the instrument is called.

\textsuperscript{144} Minimum refers to Common Equity Tier 1 of 8% of RWAs (including capital conservation buffer of 2.5% of RWAs) and Total Capital of 11.5% of RWAs including and additional capital identifies under Pillar 2.
1.11 Investment in Instruments Raised in Indian Rupees by Foreign Entities/NRIs

(i) Investment by FIIs and NRIs shall be within an overall limit of 49% and 24% of the issue respectively, subject to the investment by each FII not exceeding 10% of the issue and investment by each NRI not exceeding 5% of the issue. Investment by FIIs in these instruments shall be outside the ECB limit for rupee denominated corporate debt as fixed by Government of India from time to time. However, investment by FIIs in these instruments will be subject to separate ceiling of USD 500 million. The overall non-resident holding of Preference Shares and equity shares in public sector banks will be subject to the statutory / regulatory limit.

(ii) AIFIs should comply with the terms and conditions, if any, stipulated by SEBI / other regulatory authorities in regard to issue of the instruments.

1.12 Reporting of Issuances

AIFIs issuing these instruments shall submit a report to the Chief General Manager-in-charge, Department of Regulation, Central Office, Reserve Bank of India, Mumbai giving details of the debt raised as per the format prescribed below duly certified by the compliance officer of the AIFI.

1.13 Investment in these Instruments Issued by other AIFIs/ Banks

(i) An AIFI's investment in these instruments issued by banks and other AIFIs will be reckoned along with the investment in other instruments eligible for capital status while computing compliance with the overall ceiling of 10% of investing AIFI's total capital funds prescribed under Exposure Norms applicable to AIFIs and also subject to cross holding limits.

(ii) AIFI's investments in these instruments issued by banks / other AIFIs will attract risk weight for capital adequacy purposes as provided vide paragraphs 5.6 and 8.3.5 of this Chapter, whichever applicable.

1.14 Classification in the Balance Sheet

These instruments will be classified as ‘Borrowings’ under the Balance Sheet.

1.15 PCPS/RNCPs/RCPS to Retail Investors\(^{145}\)

With a view to enhancing investor education relating to risk characteristics of regulatory

\(^{145}\) Please refer to [circular DBOD.BP.BC.38/21.06.2014-15 dated September 1, 2014](http://example.com) addressed to banks on Implementation of Basel III Capital Regulations in India – Amendments.
capital requirements, AIFIs issuing PCPS/RNCPs/RCPS to retail investors, subject to approval of their Board, should adhere to the following conditions:

(a) The requirement for specific sign-off as quoted below, from the investors for having understood the features and risks of the instrument may be incorporated in the common application form of the proposed issue.

"By making this application, I / We acknowledge that I/We have understood the terms and conditions of the Issue of [insert the name of the instruments being issued] of [Name of The AIFI] as disclosed in the Draft Shelf Prospectus, Shelf Prospectus and Tranche Document ".

(b) All the publicity material, application form and other communication with the investor should clearly state in bold letters (with font size 14) how a PCPS/RNCPs/RCPS is different from common shares / fixed deposit particularly that it is not covered by deposit insurance. In addition, the loss absorbency features of the instrument should be clearly explained and the investor’s sign-off for having understood these features and other terms and conditions of the instrument should be obtained.
Prudential Guidelines on Credit Default Swaps (CDS)

(DBOD.BP.BC.No.61/21.06.203/2011-12 dated November 30, 2011 addressed to banks)

1. Introduction

With a view to providing market participants a tool to transfer and manage credit risk associated with corporate bonds, Reserve Bank of India has introduced single name CDS on corporate bonds. AIFIs can undertake transactions in such CDS, as users. As users, AIFIs can buy CDS to hedge a Banking Book or Trading Book exposure. The prudential guidelines dealing with CDS are dealt with in the following paragraphs.

2. Definitions

The following definitions are used in these guidelines:

(i) **Credit event payment** - the amount which is payable by the credit protection provider to the credit protection buyer under the terms of the credit derivative contract following the occurrence of a credit event. The payment can be in the form of physical settlement (payment of par in exchange for physical delivery of a deliverable obligation of the reference entity) or cash settlement (either a payment determined on a par-less-recovery basis, i.e. determined using the par value of the reference obligation less that obligation’s recovery value, or a fixed amount, or a fixed percentage of the par amount).

(ii) **Deliverable asset / obligation** - any obligation of the reference entity which can be delivered, under the terms of the contract, if a credit event occurs. [A deliverable obligation is relevant for credit derivatives that are to be physically settled.]

(iii) **Reference obligation** - the obligation used to calculate the amount payable when a credit event occurs under the terms of a credit derivative contract. [A reference obligation is relevant for obligations that are to be cash settled (on a par-less-recovery basis).]

(iv) **Underlying asset / obligation** - The asset which a protection buyer is seeking to hedge.

3. Classification of CDS into Trading Book and Banking Book Positions

For the purpose of capital adequacy for CDS transactions, Trading Book would comprise Held for Trading positions and Banking Book would comprise Held to Maturity and Available for Sale positions. A CDS being a financial derivative will be classified in the Trading Book except when it is contracted and designated as a hedge for a Banking Book exposure. Thus, the CDS positions held in the Trading Book would include positions which:

146 For the present, only the deliverable obligations specified in the guidelines on CDS vide circular IDMD.PCD.No. 5053 /14.03.04/2010-11 dated May 23, 2011 will be permitted.

147 Please refer to paragraph 2.4 of the circular IDMD.PCD.No. 5053 /14.03.04/2010-11 dated May 23, 2011.

148 Please refer to paragraph 2.4 of the circular IDMD.PCD.No. 5053 /14.03.04/2010-11 dated May 23, 2011.
(a) are meant for hedging the exposures in the Trading Book;
(b) are held for short-term resale; and
(c) are taken by the AIFI with the intention of benefiting in the short-term from the actual and / or expected differences between their buying and selling prices.

CDS positions meant for hedging Banking Book exposures will be classified in the Banking Book. However, all CDS positions, either in Banking Book or Trading Book, should be marked-to-market. All CDS positions should meet the operational requirements indicated in paragraph 4 below.

4. Operational requirements for CDS to be recognised as eligible External / Third-party hedges for Trading Book and Banking Book

(a) A CDS contract should represent a direct claim on the protection provider and should be explicitly referenced to specific exposure, so that the extent of the cover is clearly defined and incontrovertible.

(b) Other than non-payment by a protection purchaser of premium in respect of the credit protection contract it should be irrevocable.

(c) There should be no clause in the contract that would allow the protection provider unilaterally to cancel the credit cover or that would increase the effective cost of cover as a result of deteriorating credit quality in the hedged exposure.

(d) The CDS contract should be unconditional; there should be no clause in the protection contract outside the direct control of the AIFI (protection buyer) that could prevent the protection provider from being obliged to pay out in a timely manner in the event that the original counterparty fails to make the payment(s) due.

(e) The credit events specified by the contracting parties should at a minimum cover:
   (i) failure to pay the amounts due under terms of the underlying obligation that are in effect at the time of such failure (with a grace period that is closely in line with the grace period in the underlying obligation);
   (ii) bankruptcy, insolvency or inability of the obligor to pay its debts, or its failure or admission in writing of its inability generally to pay its debts as they become due, and analogous events; and
   (iii) restructuring of the underlying obligation (as contemplated in the IDMD guidelines on CDS dated May 23, 2011) involving forgiveness or postponement of principal, interest or fees that results in a credit loss event (i.e. charge-off, specific provision or other similar debit to the profit and loss account);
   (iv) when the restructuring of the underlying obligation is not covered by the CDS, but the other requirements in paragraph 4 are met, partial recognition of the CDS will be allowed. If the amount of the CDS is less than or equal to the amount of the underlying obligation, 60% of the amount of the hedge can be recognised as covered. If the amount of the CDS is larger than that of the underlying obligation, then the amount of eligible hedge is capped at 60% of the amount of the underlying obligation.

(f) If the CDS specifies deliverable obligations that are different from the underlying obligation, the resultant asset mismatch will be governed under paragraph (k) below.

(g) The CDS shall not terminate prior to expiration of any grace period required for a default on the underlying obligation to occur as a result of a failure to pay149.

---

149 The maturity of the underlying exposure and the maturity of the hedge should be defined conservatively. The effective maturity of the underlying should be gauged as the longest possible remaining time before the counterparty is scheduled to fulfill its obligation, taking into account any applicable grace period.
(h) The CDS allowing for cash settlement are recognised for capital purposes insofar as a robust valuation process is in place in order to estimate loss reliably. There should be a clearly specified period for obtaining post-credit event valuations of the underlying obligation. If the reference obligation specified in the CDS for purposes of cash settlement is different than the underlying obligation, the resultant asset mismatch will be governed under paragraph (k) below.

(i) If the protection purchaser’s right/ability to transfer the underlying obligation to the protection provider is required for settlement, the terms of the underlying obligation should provide that any required consent to such transfer may not be unreasonably withheld.

(j) The identity of the parties responsible for determining whether a credit event has occurred should be clearly defined. This determination should not be the sole responsibility of the protection seller. The protection buyer should have the right/ability to inform the protection provider of the occurrence of a credit event.

(k) A mismatch between the underlying obligation and the reference obligation or deliverable obligation under the CDS (i.e. the obligation used for purposes of determining cash settlement value or the deliverable obligation) is permissible if (1) the reference obligation or deliverable obligation ranks pari passu with or is junior to the underlying obligation, and (2) the underlying obligation and reference obligation or deliverable obligation share the same obligor (i.e. the same legal entity) and legally enforceable cross-default or cross-acceleration clauses are in place.

(l) A mismatch between the underlying obligation and the obligation used for purposes of determining whether a credit event has occurred is permissible if (1) the latter obligation ranks pari passu with or is junior to the underlying obligation, and (2) the underlying obligation and reference obligation share the same obligor (i.e. the same legal entity) and legally enforceable cross-default or cross-acceleration clauses are in place.

5. Capital Adequacy Requirement for CDS Positions in the Banking Book

5.1 Recognition of External/Third-party CDS Hedges

5.1.1 In case of Banking Book positions hedged by bought CDS positions, no exposure will be reckoned against the reference entity / underlying asset in respect of the hedged exposure, and exposure will be deemed to have been substituted by the protection seller, if the following conditions are satisfied:

(a) Operational requirements mentioned in paragraph 4 are met;

(b) The risk weight applicable to the protection seller under the Standardised Approach for credit risk is lower than that of the underlying asset; and

(c) There is no maturity mismatch between the underlying asset and the reference / deliverable obligation. If this condition is not satisfied, then the amount of credit protection to be recognised should be computed as indicated in paragraph 5.1.3 (ii) below.

5.1.2 If the conditions (a) and (b) above are not satisfied or the AIFI breaches any of these conditions subsequently, the AIFI shall reckon the exposure on the underlying asset; and the CDS position will be transferred to Trading Book where it will be subject to specific risk, counterparty credit risk and general market risk (wherever applicable) capital requirements as applicable to Trading Book.

5.1.3 The unprotected portion of the underlying exposure should be risk-weighted as applicable under Basel II framework. The amount of credit protection shall be adjusted if there are any mismatches between the underlying asset/ obligation and the reference / deliverable asset / obligation with regard to asset or maturity. These are dealt with in detail in the following paragraphs.
(i) Asset mismatches

Asset mismatch will arise if the underlying asset is different from the reference asset or deliverable obligation. Protection will be reckoned as available by the protection buyer only if the mismatched assets meet the requirements specified in paragraph 4 (k) above.

(ii) Maturity mismatches

The protection buyer would be eligible to reckon the amount of protection if the maturity of the credit derivative contract were to be equal or more than the maturity of the underlying asset. If, however, the maturity of the CDS contract is less than the maturity of the underlying asset, then it would be construed as a maturity mismatch. In case of maturity mismatch the amount of protection will be determined in the following manner:

a. If the residual maturity of the credit derivative product is less than **three months** no protection will be recognized.

b. If the residual maturity of the credit derivative contract is **three months** or more protection proportional to the period for which it is available will be recognised. When there is a maturity mismatch the following adjustment will be applied.

\[
Pa = P \times \frac{(t - .25)}{(T - .25)}
\]

Where:

- \(Pa\) = value of the credit protection adjusted for maturity mismatch
- \(P\) = credit protection
- \(t\) = \(\min(T, \text{residual maturity of the credit protection arrangement})\) expressed in years
- \(T\) = \(\min(5, \text{residual maturity of the underlying exposure})\) expressed in years

**Example:** Suppose the underlying asset is a corporate bond of Face Value of Rs. 100 where the residual maturity is 5 years and the residual maturity of the CDS is 4 years. The amount of credit protection is computed as under:

\[
100 \times \frac{(4-.25)}{(5-.25)} = 100 \times (3.75 \div 4.75) = 78.95
\]

c. Once the residual maturity of the CDS contract reaches **three months**, protection ceases to be recognised.

5.2 Internal Hedges

AIFIs can use CDS contracts to hedge against the credit risk in their existing corporate bonds portfolios. An AIFI can hedge a Banking Book credit risk exposure either by an internal hedge (the protection purchased from the trading desk of the AIFI and held in the Trading Book) or an external hedge (protection purchased from an eligible third party protection provider). When an AIFI hedges a Banking Book credit risk exposure (corporate bonds) using a CDS booked in its Trading Book (i.e. using an internal hedge), the Banking Book exposure is not deemed to be hedged for capital purposes unless the AIFI transfers the credit risk from the Trading Book to an eligible third party protection provider through a CDS meeting the requirements of paragraph 5.1 vis-à-vis the Banking Book exposure. Where such third party protection is purchased and is recognised as a hedge of a Banking Book exposure for regulatory capital purposes, no capital is required to be maintained on internal and external CDS hedge. In such cases, the external CDS will act as indirect hedge for the Banking Book exposure and the capital adequacy in terms of paragraph 5.1, as applicable for external / third party hedges, will be applicable.

6. Capital Adequacy for CDS in the Trading Book

6.1 General Market Risk

A credit default swap does not normally create a position for general market risk for either the protection buyer or protection seller. However, the present value of premium payable /
receivable is sensitive to changes in the interest rates. In order to measure the interest rate risk in premium receivable/payable, the present value of the premium can be treated as a notional position in Government securities of relevant maturity. These positions will attract appropriate capital charge for general market risk. The protection buyer / seller will treat the present value of the premium payable / receivable equivalent to a short / long notional position in Government securities of relevant maturity.

6.2 Specific Risk for Exposure to Reference Entity

A CDS creates a notional long / short position for specific risk in the reference asset / obligation for protection seller / protection buyer. For calculating specific risk capital charge, the notional amount of the CDS and its maturity should be used. The specific risk capital charge for CDS positions will be as per Table-1 and Table-2 below.

**Table-1: Specific risk capital charges for bought and sold CDS positions in the Trading Book: Exposures to entities other than Commercial Real Estate Companies/ NBFC-ND-SI**

### 6.2.1 Specific Risk Capital Charges for Positions Hedged by CDS

(i) AIFIs may fully offset the specific risk capital charges when the values of two legs (i.e. long and short in CDS positions) always move in the opposite direction and broadly to the same extent. This would be the case when the two legs consist of **completely identical CDS**. In these cases, no specific risk capital requirement applies to both sides of the CDS positions.

(ii) AIFIs may offset 80 per cent of the specific risk capital charges when the value of two legs (i.e. long and short) always moves in the opposite direction but not broadly to the same extent. This would be the case when a long cash position is hedged by a credit default swap and there is an exact match in terms of the reference / deliverable obligation, and the maturity of both the reference / deliverable obligation and the CDS. In addition, key features of the CDS (e.g. credit event definitions, settlement mechanisms) should not cause the price movement of the CDS to materially deviate from the price movements of the cash position. To the extent that the transaction transfers risk, an 80% specific risk offset will be applied to the side of the transaction with the higher capital charge, while the specific risk requirement on the other side will be zero.

(iii) AIFIs may offset partially the specific risk capital charges when the value of the two legs (i.e. long and short) usually moves in the opposite direction. This would be the case in the following situations:

(a) The position is captured in paragraph 6.2.1 (ii) but there is an asset mismatch between the cash position and the CDS. However, the underlying asset is included in the (reference / deliverable) obligations in the CDS documentation and meets the requirements of paragraph 4 (k).

(b) The position is captured in paragraph 6.2.1 (ii) but there is maturity mismatch between credit protection and the underlying asset. However, the underlying asset is included in the (reference / deliverable) obligations in the CDS documentation.

(c) In each of the cases in paragraph (a) and (b) above, rather than applying specific risk capital requirements on each side of the transaction (i.e. the credit protection and the underlying asset), only higher of the two capital requirements will apply.

### 6.2.2 Specific Risk Charge in CDS Positions which are not meant for Hedging

In cases not captured in paragraph 6.2.1, a specific risk capital charge will be assessed against both sides of the positions.

---

150 This paragraph will be applicable only in those cases where a CDS position is explicitly meant for hedging a Trading Book exposure. In other words, an AIFI cannot treat a CDS position as a hedge against any other Trading Book exposure if it was not intended to be as such ab initio.

151 A cash position in corporate bond in Trading Book hedged by a CDS position, even where the reference obligation and the underlying bonds are the same, will not qualify for 100% offset because a CDS cannot guarantee a 100% match between the market value of CDS and the appreciation / depreciation in the underlying bond at all times. This paragraph will apply only when two legs consist of completely identical CDS instruments.

152 For example, if specific risk charge on long position (corporate bond) comes to Rs.1000 and that on the short position (credit protection bought through CDS) comes to Rs.700, there will be no capital change on the short position and the long position will attract specific risk capital charge of Rs.200 (1000-80% of 1000). AIFIs will not be allowed to offset specific risk charges between two opposite CDS positions which are not completely identical.
7. **Capital Charge for Counterparty Credit Risk**

The credit exposure for the purpose of counterparty credit risk on account of CDS transactions in the Trading Book will be calculated according to the Current Exposure Method\(^\text{153}\) under Basel II framework.

7.1 **Protection Seller**

A protection seller will have exposure to the protection buyer only if the fee / premia are outstanding. In such cases, the counterparty credit risk charge for all single name long CDS positions in the Trading Book will be calculated as the sum of the current marked-to-market value, if positive (zero, if marked-to-market value is negative) and the potential future exposure add-on factors based on Table 3 given below. However, the add-on will be capped to the amount of unpaid premia.

**Table 3: Add-on factors for Protection sellers**

<table>
<thead>
<tr>
<th>Type of Reference Obligation(^\text{154})</th>
<th>Add-on factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obligations rated BBB- and above</td>
<td>10%</td>
</tr>
<tr>
<td>Below BBB- and unrated</td>
<td>20%</td>
</tr>
</tbody>
</table>

7.2 **Protection Buyer**

A CDS contract creates a counterparty exposure on the protection seller on account of the credit event payment. The counterparty credit risk charge for all short CDS positions in the Trading Book will be calculated as the sum of the current marked-to-market value, if positive (zero, if marked-to-market value is negative) and the potential future exposure add-on factors based on Table 4 given below:

**Table 4: Add-on factors for Protection Buyers**

<table>
<thead>
<tr>
<th>Type of Reference Obligation(^\text{155})</th>
<th>Add-on factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obligations rated BBB- and above</td>
<td>10%</td>
</tr>
<tr>
<td>Below BBB- and unrated</td>
<td>20%</td>
</tr>
</tbody>
</table>

7.3 **Capital Charge for Counterparty risk for Collateralised Transactions in CDS**

As mentioned in paragraph 3.3 of the circularIDMD.PCD.No.10/14.03.04/2012-13 dated January 7, 2013, collaterals and margins would be maintained by the individual market

---

\(^{153}\) A CDS contract, which is required to be marked-to-market, creates bilateral exposure for the parties to the contract. The mark-to-market value of a CDS contract is the difference between the default-adjusted present value of protection payment (called "protection leg" / "credit leg") and the present value of premium payable called ("premium leg"). If the value of credit leg is less than the value of the premium leg, then the marked-to-market value for the protection seller will be positive. Therefore, the protection seller will have exposure to the counterparty (protection buyer) if the value of premium leg is more than the value of credit leg. In case, no premium is outstanding, the value of premium leg will be zero and the mark-to-market value of the CDS contract will always be negative for the protection seller and therefore, protection seller will not have any exposure to the protection buyer. In no case, the protection seller’s exposure on protection buyer can exceed the amount of the premium unpaid. For the purpose of capital adequacy as well as exposure norms, the measure of counterparty exposures in case of CDS transaction held in Trading Book is the Potential Future Exposure (PFE) which is measured and recognised as per Current Exposure Method.

\(^{154}\) The add-on factors will be the same regardless of maturity of the reference obligations or CDS contract.

\(^{155}\) The add-on factors will be the same regardless of maturity of the reference obligations or CDS contract.
participants. The counterparty exposure for CDS traded in the OTC market will be calculated as per the Current Exposure Method. Under this method, the calculation of the counterparty credit risk charge for an individual contract, taking into account the collateral, will be as follows:

Counterparty risk capital charge = \[(RC + \text{add-on}) - CA\] x r x 9%

where:

RC = the replacement cost,
add-on = the amount for potential future exposure calculated according to paragraph 7 above.
CA = the volatility adjusted amount of eligible collateral under the comprehensive approach prescribed in paragraphs 7.3 “Credit Risk Mitigation Techniques- Collateralised Transactions” of these guidelines, or zero if no eligible collateral is applied to the transaction, and
r = the risk weight of the counterparty.

8. **Treatment of Exposures Below Materiality Thresholds**

Materiality thresholds on payments below which no payment is made in the event of loss are equivalent to retained first loss positions and should be assigned risk weight of 1250% for capital adequacy purpose by the protection buyer.

9. **General Provisions Requirements**

At present, general provisions (standard asset provisions) are required only for Loans and Advances and the positive marked-to-market values of derivatives contracts. For all CDS positions including the hedged positions, both in the Banking Book and Trading Book, AIFIs should hold general provisions for gross positive marked-to-market values of the CDS contracts.

10. **Prudential Treatment Post-Credit Event**

10.1 **Protection Buyer**

In case the credit event payment is not received within the period as stipulated in the CDS contract, the protection buyer shall ignore the credit protection of the CDS and reckon the credit exposure on the underlying asset and maintain appropriate level of capital and provisions as warranted for the exposure. On receipt of the credit event payment, (a) the underlying asset shall be removed from the books if it has been delivered to the protection seller or (b) the book value of the underlying asset shall be reduced to the extent of credit event payment received if the credit event payment does not fully cover the book value of the underlying asset and appropriate provisions shall be maintained for the reduced value.

10.2 **Protection Seller**

10.2.1 From the date of credit event and until the credit event payment in accordance with the CDS contract, the protection seller shall debit the Profit and Loss account and recognise a liability to pay to the protection buyer, for an amount equal to fair value of the contract (notional of credit protection less expected recovery value). In case, the fair value of the deliverable obligation (in case of physical settlement) / reference obligation (in case of cash settlement) is not available after the date of the credit event, then until the time that value is available, the protection seller should debit the Profit and Loss account for the full amount of the protection sold and recognise a liability to pay to the protection buyer equal to that amount.
10.2.2 In case of physical settlement, after the credit event payment, the protection seller shall recognise the assets received, if any, from the protection buyer at the fair value. These investments will be classified as non-performing investments and valued in terms of “Prudential Norms for Classification, Valuation and Operation of Investment Portfolio” applicable to AIFIs”. Thereafter, the protection seller shall subject these assets to the appropriate prudential treatment as applicable to corporate bonds.

11. Exposure Norms

11.1 For the present, the CDS is primarily intended to provide an avenue to investors for hedging credit risk in the corporate bonds, after they have invested in the bonds. It should, therefore, not be used as a substitute for a guarantee. Accordingly, an AIFI should not sell credit protection by writing a CDS on a corporate bond on the date of its issuance in the primary market or undertake, before or at the time of issuance of the bonds, to write such protection in future.

11.2 Exposure on account of all CDS contracts will be aggregated and combined with other on-balance sheet and off-balance sheet exposures against the reference entity for the purpose of complying with the exposure norms.

11.3 Protection Seller

(i) A protection seller will recognise an exposure to the reference entity of the CDS contract equal to the amount of credit protection sold, subject to paragraph (ii) below.

(ii) If a market maker has two completely identical opposite positions in CDS forming a hedged position which qualifies for capital adequacy treatment in terms of paragraph 6.2.1(i), no exposure would be reckoned against the reference entity.

(iii) Protection seller will also recognise an exposure to the counterparty equal to the total credit exposure calculated under Current Exposure Method as prescribed in Basel II framework in the case of all CDS positions held in the Trading Book.

11.4 Protection Buyer

(i) In respect of obligations hedged in the Banking Book as indicated in paragraph 5.1 and Trading Book as indicated in paragraph 6.2.1 (ii), the protection buyer will not reckon any exposure on the reference entity. The exposure will be deemed to have been transferred on the protection seller to the extent of protection available.

(ii) In all other cases where the obligations in Banking Book or Trading Book are hedged by CDS positions, the protection buyer will continue to reckon the exposure on the reference entity equal to the outstanding position of the underlying asset.

(iii) For all bought CDS positions (hedged and un-hedged) held in Trading Book, the protection buyer will also reckon exposure on the counterparties to the CDS contracts as measured by the Current Exposure Method.

(iv) The protection buyer needs to adhere to all the criteria required for transferring the exposures fully to the protection seller in terms of paragraph (i) above.

---

156 As per extant instructions issued by RBI, banks are not permitted to guarantee the repayment of principal and/or interest due on corporate bonds. Considering this restriction, AIFIs’ writing credit protection through CDS on a corporate bond on the date of its issuance or undertaking, before or at the time of issuance, to write such protection in future, will be deemed to be a violation of the said instructions.
on an on-going basis so as to qualify for exposure relief on the underlying asset. In case any of these criteria are not met subsequently, the AIFI will have to reckon the exposure on the underlying asset. Therefore, AIFIs should restrict the total exposure to an obligor including that covered by way of various unfunded credit protections (guarantees, LCs, standby LCs, CDS, etc.) within an internal exposure ceiling considered appropriate by the Board of the AIFI in such a way that it does not breach the single / group borrower exposure limit prescribed by RBI. In case of the event of any breach in the single / group borrower exposure limit, the entire exposure in excess of the limit will be risk weighted at 1250%. In order to ensure that consequent upon such a treatment, the AIFI does not breach the minimum capital requirement prescribed by RBI, it should keep sufficient cushion in capital in case it assumes exposures in excess of normal exposure limit.

(v) In respect of bought CDS positions held in Trading Book which are not meant for hedging, the protection buyer will not reckon any exposure against the reference entity\(^1\).

12. **Netting of Exposures**

No netting of positive and negative marked-to-market values of the contracts with the same counterparty, including that in the case of hedged positions will be allowed for the purpose of capital adequacy for counterparty credit risk, provisioning and exposure norms.

13. **Reporting Requirements**

AIFIs should report “total exposure” in all cases where they have assumed exposures against borrowers in excess of the normal single / group exposure limits due to the credit protections obtained by them through CDS, guarantees or any other instruments of credit risk transfer, to the Department of Supervision (DOS) on a quarterly basis.

---

\(^1\) In a CDS transaction, the protection buyer does not suffer a loss when reference entity defaults; it rather gains in such a situation.
**Part – A**

**Illustrations on Credit Risk Mitigation (Loan- Exposures)**

**Calculation of Exposure amount for collateralised transactions**

\[
E^* = \text{Max} \left\{ 0, \left[ E \times (1 + H_e) - C \times (1 - H_c - H_{FX}) \right] \right\}
\]

Where,

- \(E^*\) = Exposure value after risk mitigation
- \(E\) = Current value of the exposure
- \(H_e\) = Haircut appropriate to the exposure
- \(C\) = Current value of the collateral received
- \(H_c\) = Haircut appropriate to the collateral
- \(H_{FX}\) = Haircut appropriate for currency mismatch between the collateral and exposure

### Exchange rate assumed to be 1 USD = Rs.40

@ In case of long term ratings, as per para 6.4.2 of the Chapter, where “+” or “-” notation is attached to the rating, the corresponding main rating category risk weight is to be used. Hence risk weight is 100 per cent.

( * ) Haircut for exposure is taken as zero because the loans are not marked to market and hence are not volatile

Case 4: Haircut applicable as per Table – 14 (para 7.3.7) of this Chapter

Case 5: It is assumed that the Mutual Fund meets the criteria specified in paragraph 7.3.5(viii) and has investments in the securities all of which have residual maturity of more than five years are rated AA and above – which would attract a haircut of eight per cent in terms of Table 14 (para 7.3.7).
Illustrations on computation of capital charge for Counterparty Credit Risk (CCR) – Repo Transactions

An illustration showing computation of total capital charge for a repo transaction comprising the capital charge for CCR and Credit/Market risk for the underlying security, under Basel-II is furnished below:

A. Particulars of a Repo Transaction:

Let us assume the following parameters of a hypothetical repo transaction:

Measurement of capital charge for Market Risks in respect of Interest Rate Derivatives and Options

A. Interest Rate Derivatives

The measurement system should include all interest rate derivatives and off-balance-sheet instruments in the trading book, which react to changes in interest rates, (e.g. forward rate agreements (FRAs), other forward contracts, bond futures, interest rate and cross-currency swaps and forward foreign exchange positions). Options can be treated in a variety of ways as described in para B.1 below. A summary of the rules for dealing with interest rate derivatives is set out in the Table at the end of this section.

1. Calculation of positions

The derivatives should be converted into positions in the relevant underlying and be subjected to specific and general market risk charges as described in the guidelines. In order to calculate the capital charge, the amounts reported should be the market value of the principal amount of the underlying or of the notional underlying. For instruments where the apparent notional amount differs from the effective notional amount, AIFIs must use the effective notional amount.

(a) Futures and Forward Contracts, including Forward Rate Agreements

These instruments are treated as a combination of a long and a short position in a notional government security. The maturity of a future or a FRA will be the period until delivery or exercise of the contract, plus - where applicable - the life of the underlying instrument. For example, a long position in a June three-month interest rate future (taken in April) is to be reported as a long position in a government security with a maturity of five months and a short position in a government security with a maturity of two months. Where a range of deliverable instruments may be delivered to fulfil all the contract, the AIFI has flexibility to elect which deliverable security goes into the duration ladder but should take account of any conversion factor defined by the exchange.

(b) Swaps

Swaps will be treated as two notional positions in government securities with relevant maturities. For example, an interest rate swap under which an AIFI is receiving floating rate interest and paying fixed will be treated as a long position in a floating rate instrument of maturity equivalent to the period until the next interest fixing and a short position in a fixed-rate instrument of maturity equivalent to the residual life of the swap. For swaps that pay or receive a fixed or floating interest rate against some other reference price, e.g. a stock index, the interest rate component should be slotted into the appropriate repricing maturity category, with the equity component being included in the equity framework. Separate legs of cross-currency swaps are to be reported in the relevant maturity ladders for the currencies concerned.

2. Calculation of capital charges for derivatives under the Standardised Methodology

(a) Allowable offsetting of Matched Positions

The following may be excluded from the interest rate maturity framework altogether (for both specific and general market risk);

- Long and short positions (both actual and notional) in identical instruments with exactly the same issuer, coupon, currency and maturity.
A matched position in a future or forward and its corresponding underlying may also be fully offset, (the leg representing the time to expiry of the future should however be reported) and thus excluded from the calculation.

When the future or the forward comprises a range of deliverable instruments, offsetting of positions in the future or forward contract and its underlying is only permissible in cases where there is a readily identifiable underlying security which is most profitable for the trader with a short position to deliver. The price of this security, sometimes called the "cheapest-to-deliver", and the price of the future or forward contract should in such cases move in close alignment.

No offsetting will be allowed between positions in different currencies; the separate legs of cross-currency swaps or forward foreign exchange deals are to be treated as notional positions in the relevant instruments and included in the appropriate calculation for each currency.

In addition, opposite positions in the same category of instruments can in certain circumstances be regarded as matched and allowed to offset fully. To qualify for this treatment the positions must relate to the same underlying instruments, be of the same nominal value and be denominated in the same currency. In addition:

- for Futures: offsetting positions in the notional or underlying instruments to which the futures contract relates must be for identical products and mature within seven days of each other;
- for Swaps and FRAs: the reference rate (for floating rate positions) must be identical and the coupon closely matched (i.e. within 15 basis points); and
- for Swaps, FRAs and Forwards: the next interest fixing date or, for fixed coupon positions or forwards, the residual maturity must correspond within the following limits:
  - less than one month hence: same day;
  - between one month and one year hence: within seven days;
  - over one year hence: within thirty days.

AIFIs with large swap books may use alternative formulae for these swaps to calculate the positions to be included in the duration ladder. The method would be to calculate the sensitivity of the net present value implied by the change in yield used in the duration method and allocate these sensitivities into the time-bands set out in Table 17 in paragraph 8.3.9 of this Chapter.

(b) Specific Risk

Interest rate and currency swaps, FRAs, forward foreign exchange contracts and interest rate futures will not be subject to a specific risk charge. This exemption also applies to futures on an interest rate index (e.g. LIBOR). However, in the case of futures contracts where the underlying is a debt security, or an index representing a basket of debt securities, a specific risk charge will apply according to the credit risk of the issuer as set out in paragraphs above.

(c) General Market Risk

General market risk applies to positions in all derivative products in the same manner as for cash positions, subject only to an exemption for fully or very closely matched positions in identical instruments as defined in paragraphs above. The various categories of instruments should be slotted into the maturity ladder and treated according to the rules identified earlier.

</tbody>
</table>

B. Treatment of Options

1. Alternative approaches for measuring price risk for options are permisable as under:

   - those AIFIs which solely use purchased options\(^{158}\) will be free to use the simplified approach described in Section I below;
   - those AIFIs which also write options will be expected to use one of the intermediate approaches as set out in Section II below.

2. In the simplified approach, the positions for the options and the associated underlying, cash or forward, are not subject to the standardised methodology but rather are "carved-out" and subject to separately calculated capital charges that incorporate both general market risk and specific risk. The risk numbers thus generated are then added to the capital charges for the relevant category, i.e. interest rate related instruments, equities, and foreign exchange as described in paragraph 8.3 to 8.5 of this Chapter. The delta-plus method uses the sensitivity parameters or "Greek letters" associated with options to measure their market risk and capital requirements. Under this method, the delta-equivalent position of each option becomes part of the standardised methodology set out in paragraph 8.3 to 8.5 of this Chapter with the delta-equivalent amount subject to the applicable general market risk charges. Separate capital charges are then applied to the gamma and Vega risks of the option positions. The scenario approach uses simulation techniques to calculate changes in the value of an options portfolio for changes in the level and volatility of its associated underlyings. Under this approach, the general market risk charge is determined by the scenario "grid" (i.e. the specified combination of underlying and volatility changes) that produces the largest loss. For the delta-plus method and the scenario approach the specific risk capital charges are determined separately by multiplying the delta-equivalent of each option by the specific risk weights set out in paragraph 8.3 to 8.4 of this Chapter.

---

\(^{158}\) Unless all their written option positions are hedged by perfectly matched long positions in exactly the same options, in which case no capital charge for market risk is required
I. Simplified Approach

3. AIFIs which handle a limited range of purchased options only will be free to use the simplified approach set out in Table A below, for particular trades. As an example of how the calculation would work, if a holder of 100 shares currently valued at Rs.10 each holds an equivalent put option with a strike price of Rs.11, the capital charge would be: Rs.1,000 x 18 per cent (i.e. 9 per cent specific plus 9 per cent general market risk) = Rs.180, less the amount the option is in the money (Rs.11 – Rs.10) x 100 = Rs.100, i.e. the capital charge would be Rs.80. A similar methodology applies for options whose underlying is a foreign currency or an interest rate related instrument.

Table A - Simplified approach: capital charges

<table>
<thead>
<tr>
<th>Position</th>
<th>Treatment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long cash and Long put</td>
<td>The capital charge will be the market value of the underlying security(^{159}) multiplied by the sum of specific and general market risk charges(^{160}) for the underlying less the amount the option is in the money (if any) bounded at zero(^{161})</td>
</tr>
<tr>
<td>Or Short cash and Long call</td>
<td></td>
</tr>
<tr>
<td>Long call</td>
<td>The capital charge will be the lesser of:</td>
</tr>
<tr>
<td>Or Long put</td>
<td>(i) the market value of the underlying security multiplied by the sum of specific and general market risk charges(^{3}) for the underlying</td>
</tr>
<tr>
<td></td>
<td>(ii) the market value of the option(^{162})</td>
</tr>
</tbody>
</table>

II. Intermediate Approaches

(a) Delta-plus Method

4. AIFIs which write options will be allowed to include delta-weighted options positions within the standardised methodology set out in paragraph 8.3 to 8.5 of this Chapter. Such options should be reported as a position equal to the market value of the underlying multiplied by the delta.

However, since delta does not sufficiently cover the risks associated with options positions, AIFIs will also be required to measure gamma (which measures the rate of change of delta) and Vega (which measures the sensitivity of the value of an option with respect to a change in volatility) sensitivities in order to calculate the total capital charge. These sensitivities will be calculated according to an approved exchange model or to the AIFI’s proprietary options pricing model subject to oversight by the Reserve Bank of India\(^{163}\).

\(^{159}\) In some cases such as foreign exchange, it may be unclear which side is the "underlying security"; this should be taken to be the asset which would be received if the option were exercised. In addition the nominal value should be used for items where the market value of the underlying instrument could be zero, e.g. caps and floors, swaptions etc.

\(^{160}\) Some options (e.g. where the underlying is an interest rate or a currency) bear no specific risk, but specific risk will be present in the case of options on certain interest rate-related instruments (e.g. options on a corporate debt security or corporate bond index; see Section B for the relevant capital charges) and for options on equities and stock indices (see Section C). The charge under this measure for currency options will be 9 per cent.

\(^{161}\) For options with a residual maturity of more than six months, the strike price should be compared with the forward, not current, price. An AIFI unable to do this must take the “in-the-money” amount to be zero.

\(^{162}\) Where the position does not fall within the trading book (i.e. options on certain foreign exchange or commodities positions not belonging to the trading book), it may be acceptable to use the book value instead.

\(^{163}\) Reserve Bank of India may wish to require AIFIs doing business in certain classes of exotic options (e.g. barriers, digitals) or in options “at-the-money” that are close to expiry to use either the scenario approach or the
5. Delta-weighted positions with debt securities or interest rates as the underlying will be slotted into the interest rate time-bands, as set out in Table 17 of paragraph 8.3 of this Chapter, under the following procedure. A two-legged approach should be used as for other derivatives, requiring one entry at the time the underlying contract takes effect and a second at the time the underlying contract matures. For instance, a bought call option on a June three-month interest-rate future will in April be considered, on the basis of its delta-equivalent value, to be a long position with a maturity of five months and a short position with a maturity of two months. The written option will be similarly slotted as a long position with a maturity of two months and a short position with a maturity of five months. Floating rate instruments with caps or floors will be treated as a combination of floating rate securities and a series of European-style options. For example, the holder of a three-year floating rate bond indexed to six month LIBOR with a cap of 15 per cent will treat it as:

(i) a debt security that reprices in six months; and

(ii) a series of five written call options on a FRA with a reference rate of 15 per cent, each with a negative sign at the time the underlying FRA takes effect and a positive sign at the time the underlying FRA matures.

6. The capital charge for options with equities as the underlying will also be based on the delta-weighted positions which will be incorporated in the measure of market risk described in paragraph 8.4 of this Chapter. For purposes of this calculation each national market is to be treated as a separate underlying. The capital charge for options on foreign exchange and gold positions will be based on the method set out in paragraph 8.5 of this Chapter. For delta risk, the net delta-based equivalent of the foreign currency and gold options will be incorporated into the measurement of the exposure for the respective currency (or gold) position.

7. In addition to the above capital charges arising from delta risk, there will be further capital charges for gamma and for Vega risk. AIFIs using the delta-plus method will be required to calculate the gamma and Vega for each option position (including hedge positions) separately. The capital charges should be calculated in the following way:

(i) for each individual option a "gamma impact" should be calculated according to a Taylor series expansion as:

\[
\text{Gamma impact} = \frac{1}{2} \left( \text{Gamma} \times \text{VU}^2 \right)
\]

where \( \text{VU} \) = Variation of the underlying of the option.

(ii) \( \text{VU} \) will be calculated as follows:

- for interest rate options if the underlying is a bond, the price sensitivity should be worked out as explained. An equivalent calculation should be carried out where the underlying is an interest rate.
- for options on equities and equity indices; which are not permitted at present, the market value of the underlying should be multiplied by 9 per cent;
- for foreign exchange and gold options: the market value of the underlying internal models alternative, both of which can accommodate more detailed revaluation approaches.

164 Two-months call option on a bond future, where delivery of the bond takes place in September, would be considered in April as being long the bond and short a five-month deposit, both positions being delta-weighted.

165 The rules applying to closely-matched positions set out in paragraph 2 (a) of this Annex will also apply in this respect.

166 The basic rules set out here for interest rate and equity options do not attempt to capture specific risk when calculating gamma capital charges. However, Reserve Bank may require specific AIFIs to do so.
should be multiplied by 9 per cent;

(iii) For the purpose of this calculation the following positions should be treated as the same underlying:

- for interest rates, each time-band as set out in Table 17 of the this Chapter;
- for equities and stock indices, each national market;
- for foreign currencies and gold, each currency pair and gold;

(iv) Each option on the same underlying will have a gamma impact that is either positive or negative. These individual gamma impacts will be summed, resulting in a net gamma impact for each underlying that is either positive or negative. Only those net gamma impacts that are negative will be included in the capital calculation.

(v) The total gamma capital charge will be the sum of the absolute value of the net negative gamma impacts as calculated above.

(vi) For volatility risk, AIFIs will be required to calculate the capital charges by multiplying the sum of the Vegas for all options on the same underlying, as defined above, by a proportional shift in volatility of ± 25 per cent.

(vii) The total capital charge for Vega risk will be the sum of the absolute value of the individual capital charges that have been calculated for Vega risk.

(b) Scenario Approach

8. More sophisticated AIFIs will also have the right to base the market risk capital charge for options portfolios and associated hedging positions on scenario matrix analysis. This will be accomplished by specifying a fixed range of changes in the option portfolio’s risk factors and calculating changes in the value of the option portfolio at various points along this “grid”. For the purpose of calculating the capital charge, the AIFI will revalue the option portfolio using matrices for simultaneous changes in the option’s underlying rate or price and in the volatility of that rate or price. A different matrix will be set up for each individual underlying as defined in paragraph 7 above. As an alternative, at the discretion of each national authority, AIFIs which are significant traders in options for interest rate options will be permitted to base the calculation on a minimum of six sets of time-bands. When using this method, not more than three of the time-bands as defined in paragraph 8.3 of this Chapter should be combined into any one set.

9. The options and related hedging positions will be evaluated over a specified range above and below the current value of the underlying. The range for interest rates is consistent with the assumed changes in yield in Table - 17 of paragraph 8.3 of this Chapter. Those AIFIs using the alternative method for interest rate options set out in paragraph 8 above should use, for each set of time-bands, the highest of the assumed changes in yield applicable to the group to which the time-bands belong. The other ranges are ±9 per cent for equities and ±9 per cent for foreign exchange and gold. For all risk categories, at least seven observations (including the current observation) should be used to divide the range into equally spaced intervals.

10. The second dimension of the matrix entails a change in the volatility of the underlying

---

167 Positions have to be slotted into separate maturity ladders by currency.
168 AIFIs using the duration method should use the time-bands as set out in Table 18 of this Chapter.
169 If, for example, the time-bands 3 to 4 years, 4 to 5 years and 5 to 7 years are combined, the highest assumed change in yield of these three bands would be 0.75.
rate or price. A single change in the volatility of the underlying rate or price equal to a shift in volatility of +25 per cent and -25 per cent is expected to be sufficient in most cases. As circumstances warrant, however, the Reserve Bank may choose to require that a different change in volatility be used and/or that intermediate points on the grid be calculated.

11. After calculating the matrix, each cell contains the net profit or loss of the option and the underlying hedge instrument. The capital charge for each underlying will then be calculated as the largest loss contained in the matrix.

12. In drawing up these intermediate approaches it has been sought to cover the major risks associated with options. In doing so, it is conscious that so far as specific risk is concerned, only the delta-related elements are captured; to capture other risks would necessitate a much more complex regime. On the other hand, in other areas the simplifying assumptions used have resulted in a relatively conservative treatment of certain options positions.

13. Besides the options risks mentioned above, the RBI is conscious of the other risks also associated with options, e.g. rho (rate of change of the value of the option with respect to the interest rate) and theta (rate of change of the value of the option with respect to time). While not proposing a measurement system for those risks at present, it expects AIFIs undertaking significant options business at the very least to monitor such risks closely. Additionally, AIFIs will be permitted to incorporate rho into their capital calculations for interest rate risk, if they wish to do so.
An Illustrative Approach for Measurement of Interest Rate Risk in the Banking Book (IRRBB) under Pillar 2

The AIFIs are required to measure the interest rate risk in the banking book (IRRBB) and hold capital commensurate with it. If supervisors determine that AIFIs are not holding capital commensurate with the level of interest rate risk, they must require the AIFI to reduce its risk, to hold a specific additional amount of capital or some combination of the two. To comply with the requirements of Pillar 2 relating to IRRBB, the guidelines on Pillar 2 issued by many regulators contain definite provisions indicating the approach adopted by the supervisors to assess the level of interest rate risk in the banking book and the action to be taken in case the level of interest rate risk found is significant.

2. The approach prescribed in the BCBS Paper on “Principles for the Management and Supervision of Interest Rate Risk”

The main components of the approach prescribed in the above mentioned supporting document are as under:

a) The assessment should take into account both the earnings perspective and economic value perspective of interest rate risk.

b) The impact on income or the economic value of equity should be calculated by applying a notional interest rate shock of 200 basis points.

c) The usual methods followed in measuring the interest rate risk are:

   a) **Earnings perspective**
      Gap Analysis, simulation techniques and Internal Models based on VaR

   b) **Economic perspective**
      Gap analysis combined with duration gap analysis, simulation techniques and Internal Models based on VaR

3. Methods for measurement of the IRRBB

3.1 Impact on Earnings

The major methods used for computing the impact on earnings are the gap Analysis, Simulations and VaR based Techniques. AIFIs may use the Gap Reports to assess the impact of adverse movements in the interest rate on income through gap method. However, the AIFIs may use the simulations also. The AIFIs may calculate the impact on the earnings by gap analysis or any other method with the assumed change in yield on 200 bps over one year. However, no capital needs to be allocated for the impact on the earnings.

3.2.1 Method indicated in the BCBS Paper on “Principles for the Management and Supervision of Interest Rate Risk”

The following steps are involved in this approach:

   a) The variables such as maturity/re-pricing date, coupon rate, frequency, principal amount for each item of asset/liability (for each category of asset / liability) are generated.

   b) The longs and shorts in each time band are offset.

   c) The resulting short and long positions are weighted by a factor that is designed to reflect the sensitivity of the positions in the different time bands to
an assumed change in interest rates. These factors are based on an assumed parallel shift of 200 basis points throughout the time spectrum, and on a proxy of modified duration of positions situated at the middle of each time band and yielding 5 per cent.

d) The resulting weighted positions are summed up, offsetting longs and shorts, leading to the net short- or long-weighted position.
e) The weighted position is seen in relation to capital.

For details AIFIs may refer to the Annex 3 and 4 of captioned paper issued by the BCBS\textsuperscript{170}.

3.2.2 Other techniques for Interest rate risk measurement

The AIFIs can also follow different versions / variations of the above techniques or entirely different techniques to measure the IRRBB if they find them conceptually sound. In this context, Annex 1 and 2 of the BCBS paper referred to above provide broad details of interest rate risk measurement techniques and overview of some of the factors which the supervisory authorities might consider in obtaining and analysing the information on individual AIFI’s exposures to interest rate risk.

4. Suggested approach for measuring the impact of IRRBB on capital

4.1 If the supervisor feels that the AIFI is not holding capital commensurate with the level of IRRBB, it may either require the AIFI to reduce the risk or allocate additional capital or a combination of the two.

4.2 The AIFIs can decide, with the approval of the Board, on the appropriate level of interest rate risk in the banking book which they would like to carry keeping in view their capital level, interest rate management skills and the ability to re-balance the banking book portfolios quickly in case of adverse movement in the interest rates. The AIFIs may be required to hold additional capital if the level of interest rate risk is considered, by the RBI, to be high in relation to their capital level or the quality of interest rate risk management framework obtaining in the AIFI. While the AIFIs may on their own decide to hold additional capital towards IRRBB keeping in view the IRR management skills and the ability to re-balance the portfolios quickly in case of adverse movement in the interest rates, the amount of exact capital add-on, if considered necessary, will be decided by the RBI as part of the SREP, in consultation with the AIFI.

5. Limit setting

The AIFIs would be well advised to consider setting the internal limits for controlling their IRRBB. The following are some of the indicative ways for setting the limits:

a) Internal limits could be fixed in terms of the maximum decline in earnings (as a percentage of the base-scenario income) or decline in capital (as a percentage of the base-scenario capital position) as a result of 200 or 300 basis point interest-rate shock.

b) The limits could also be placed in terms of PV01 value (present value of a basis point) of the net position of the AIFI as a percentage of net worth/capital of the AIFI.

<td></td>
<td></td>
<td></td>
<td></td>
<td>(risk weight 20%)</td>
</tr>
</tbody>
</table>

Formula to be used for calculation of capital charge for CVA risk:

\[ K = 2.33 \cdot \sqrt{h} \cdot \left( \sum_{i} 0.5 \cdot w_{i} \left( M_{i} \cdot \text{EAD}_{i}^{\text{total}} - M_{i}^{\text{hedge}} B_{i} \right) - \sum_{i} w_{\text{ind}} M_{\text{ind}}^{\text{hedge}} B_{\text{ind}} \right)^{2} + \sum_{i} 0.75 \cdot w_{i}^{2} \left( M_{i} \cdot \text{EAD}_{i}^{\text{total}} - M_{i}^{\text{hedge}} B_{i} \right)^{2} \]

- \( B_{i} \) is the notional of purchased single name CDS hedges - nil
- \( B_{\text{ind}} \) is the full notional of one or more index CDS of purchased protection, used to hedge CVA risk. - nil
- \( w_{\text{ind}} \) is the weight applicable to index hedges - nil
- \( M_{i}^{\text{hedge}} \) is the maturity of the hedge instrument with notional \( B_{i} \)
- \( M_{i} \) is the effective maturity of the transactions with counterparty ‘i’
- \( \text{EAD}_{i}^{\text{total}} \) is the exposure at default of counterparty ‘i’ (summed across its netting sets). For non-I-MM AIFIs the exposure should be discounted by applying the factor: \((1-\exp(-0.05*Mi))/(0.05*Mi)).
- \( h = 1 \) year

Assumptions:
- Applicable coupon rate on both legs of swap with exchange of coupon at yearly intervals for swap with counterparty A = 6% p.a.
- Applicable coupon rate on both legs of swap with exchange of coupon at yearly intervals for swap with counterparty =7% p.a.
Calculation:

Discount factor to be applied to counterparty A: \( \frac{1 - \exp(-0.05 \cdot M_A)}{0.05 \cdot M_A} \)

= 0.95551

Discounted EAD\(_A\) = 4.5 \cdot 0.95551 = 4.2981

Discount factor to be applied to counterparty B: \( \frac{1 - \exp(-0.05 \cdot M_B)}{0.05 \cdot M_B} \)

= 0.8846

Discounted EAD\(_B\) = 52.8 \cdot 0.8846 = 46.7061

\[
K = 2.33 \cdot 1 \cdot \sqrt{[(0.5 \cdot 0.008 \cdot (1.85 \cdot 4.2981 - 0) + (0.5 \cdot 0.007 \cdot (5.01 \cdot 46.7061 - 0) - 0)^2 +
(0.75 \cdot 0.008^2 \cdot (1.85 \cdot 4.2981 - 0)^2 + (0.75 \cdot 0.007^2 \cdot (5.01 \cdot 46.7061 - 0)^2)^{1/2}}
\]

= 2.33 \cdot 1.66 = 3.86

Therefore, total capital charge for CVA risk on portfolio basis = Rs. 3.86 crore

An illustrative outline of the ICAAP Document

1. What is an ICAAP document?

   The ICAAP Document would be a comprehensive Paper furnishing detailed information on the ongoing assessment of the AIFI's entire spectrum of risks, how the AIFI intends to mitigate those risks and how much current and future capital is necessary for the AIFI, reckoning other mitigating factors. The purpose of the ICAAP document is to apprise the Board of the AIFI on these aspects as also to explain to the RBI the AIFI's internal capital adequacy assessment process and the AIFIs' approach to capital management. The ICAAP could also be based on the existing internal documentation of the AIFI.

   The ICAAP document submitted to the RBI should be formally approved by the AIFI’s Board. It is expected that the document would be prepared in a format that would be easily understood at the senior levels of management and would contain all the relevant information necessary for the AIFI and the RBI to make an informed judgment as to the appropriate capital level of the AIFI and its risk management approach. Where appropriate, technical information on risk measurement methodologies, capital models, if any, used and all other work carried out to validate the approach (e.g. Board papers and minutes, internal or external reviews) could be furnished to the RBI as appendices to the ICAAP Document.

2. Contents

   The ICAAP Document should contain the following sections:

   I. Executive Summary
   II. Background
   III. Summary of current and projected financial and capital positions
   IV. Capital Adequacy
   V. Key sensitivities and future scenarios
   VI. Aggregation and diversification
   VII. Testing and adoption of the ICAAP
   VIII. Use of the ICAAP within the AIFI

I. Executive Summary

   The purpose of the Executive Summary is to present an overview of the ICAAP methodology and results. This overview would typically include:

   a) the purpose of the report and the regulated entities within a group that are covered by the ICAAP;

   b) the main findings of the ICAAP analysis:

      i. how much and what composition of internal capital the AIFI considers it should hold as compared with the minimum CRAR requirement (CRAR) under ‘Pillar 1’ calculation, and

      ii. the adequacy of the AIFI’s risk management processes;

   c) a summary of the financial position of the AIFI, including the strategic position of the AIFI, its balance sheet strength, and future profitability;

   d) brief descriptions of the capital raising and dividend plan including how the AIFI intends to manage its capital in the days ahead and for what purposes;
e) commentary on the most material risks to which the AIFI is exposed, why the level of risk is considered acceptable or, if it is not, what mitigating actions are planned;
f) commentary on major issues where further analysis and decisions are required; and
g) who has carried out the assessment, how it has been challenged / validated / stress tested, and who has approved it.

II. Background
This section would cover the relevant organisational and historical financial data for the AIFI. e.g., group structure (legal and operational), operating profit, profit before tax, profit after tax, dividends, shareholders’ funds, capital funds held vis-à-vis the regulatory requirements, customer deposits, deposits by AIFIs, total assets, and any conclusions that can be drawn from trends in the data which may have implications for the AIFI’s future.

III. Summary of current and projected financial and capital positions
This section would explain the present financial position of the AIFI and expected changes to the current business profile, the environment in which it expects to operate, its projected business plans (by appropriate lines of business), projected financial position, and future planned sources of capital.

The starting balance sheet used as reference and date as of which the assessment is carried out should be indicated.

The projected financial position could reckon both the projected capital available and projected capital requirements based on envisaged business plans. These might then provide a basis against which adverse scenarios might be compared.

IV. Capital Adequacy
This section might start with a description of the AIFI’s risk appetite, in quantitative terms, as approved by the AIFI’s Board and used in the ICAAP. It would be necessary to clearly spell out in the document whether what is being presented represents the AIFI’s view of the amount of capital required to meet minimum regulatory needs or whether represents the amount of capital that an AIFI believes it would need to meet its business plans. For instance, it should be clearly brought out whether the capital required is based on a particular credit rating desired by the AIFI or includes buffers for strategic purposes or seeks to minimise the chance of breaching regulatory requirements. Where economic capital models are used for internal capital assessment, the confidence level, time horizon, and description of the event to which the confidence level relates, should also be enumerated.

Where scenario analyses or other means are used for capital assessment, then the basis / rationale for selecting the chosen severity of scenarios used, should also be included.

The section would then include a detailed review of the capital adequacy of the AIFI.

The information provided would include the following elements:

IV.1 Timing

- the effective date of the ICAAP calculations together with details of any events between this date and the date of submission to the Board / RBI which would materially impact the ICAAP calculations together with their effects; and

- details of, and rationale for, the time period selected for which capital requirement has been assessed.
IV.2 Risks Assessed

- an identification of the major risks faced by the AIFI in each of the following categories:
  a) credit risk
  b) market risk
  c) operational risk
  d) liquidity risk
  e) concentration risk
  f) interest rate risk in the banking book
  g) residual risk of securitisation
  h) strategic risk
  i) business risk
  j) reputation risk
  k) pension obligation risk
  l) other residual risk; and
  m) any other risks that might have been identified

- for each of these risks, an explanation of how the risk has been assessed and to the extent possible, the **quantitative results** of that assessment;

- where some of these risks have been highlighted in the report of the RBI’s on-site inspection of the AIFI, an explanation of how the AIFI has mitigated these;

- where relevant, a comparison of the RBI-assessed CRAR during on-site inspection with the results of the CRAR calculations of the AIFI under the ICAAP;

- a clear articulation of the AIFI’s risk appetite, in quantitative terms, by risk category and the extent of its consistency (its ‘fit’) with the overall assessment of AIFI’s various risks; and

  - where relevant, an explanation of any other methods, apart from capital, used by the AIFI to mitigate the risks.

IV.3 Methodology and Assumptions

A description of how assessments for each of the major risks have been approached and the main assumptions made.

For instance, AIFIs may choose to base their ICAAP on the results of the CRAR calculation with the capital for additional risks (e.g. concentration risk, interest rate risk in the banking book, etc.) assessed separately and added to the Pillar 1 computations. Alternatively, AIFIs could choose to base their ICAAP on internal models for all risks, including those covered under the CRAR (i.e. Credit, Market and Operational Risks).

The description here would make clear which risks are covered by which modelling or calculation approach. This would include details of the methodology and process used to calculate risks in each of the categories identified and reason for choosing the method used in each case.

Where the AIFI uses an internal model for the quantification of its risks, this section should explain for each of those models:

- the key assumptions and parameters within the capital modelling work and background information on the derivation of any key assumptions;

- how parameters have been chosen, including the historical period used and the calibration process;

- the limitations of the model;

- the sensitivity of the model to changes in those key assumptions or parameters chosen; and
the validation work undertaken to ensure the continuing adequacy of the model. Where stress tests or scenario analyses have been used to validate, supplement, or probe the results of other modelling approaches, then this section should provide:

- details of simulations to capture risks not well estimated by the AIFI’s internal capital model (e.g. non-linear products, concentrations, illiquidity and shifts in correlations in a crisis period);
- details of the quantitative results of stress tests and scenario analyses the AIFI carried out and the confidence levels and key assumptions behind those analyses, including, the distribution of outcomes obtained for the main individual risk factors;
- details of the range of combined adverse scenarios which have been applied, how these were derived and the resulting capital requirements; and
- where applicable, details of any additional business-unit-specific or business-plan-specific stress tests selected.

IV.4 Capital Transferability

In case of AIFIs with conglomerate structure, details of any restrictions on the management’s ability to transfer capital into or out of the business(es) arising from, for example, by contractual, commercial, regulatory or statutory constraints that apply, should be furnished. Any restrictions applicable and flexibilities available for distribution of dividend by the entities in the Group could also be enumerated. In case of overseas subsidiaries of the AIFIs, the regulatory restrictions would include the minimum regulatory capital level acceptable to the host-country regulator of the subsidiary, after declaration of dividend.

V. Firm-wide risk oversight and specific aspects of risk management

V.1 Risk Management System in the AIFI

This section would describe the risk management infrastructure within the AIFI along the following lines:

- The oversight of Board and senior management
- Policies, Procedures and Limits
- identification, measurement, mitigation, controlling and reporting of risks
- MIS at the firm wide level
- Internal controls

V.2 Off-balance Sheet Exposures with a focus on Securitisation

This section would comprehensively discuss and analyse underlying risks inherent in the off-balance sheet exposures particularly its investment in structured products. When assessing securitisation exposures, AIFI should thoroughly analyse the credit quality and risk characteristics of the underlying exposures. This section should also comprehensively explain the maturity of the exposures underlying securitisation transactions relative to issued liabilities in order to assess potential maturity mismatches.

V.3 Assessment of Reputational Risk and Implicit Support

This section should discuss the possibilities of reputational risk leading to provision of implicit support, which might give rise to credit, market and legal risks. This section should thoroughly discuss potential sources of reputational risk to the AIFI.

---

171 Master Circular DBOD.No.BP.BC.73/21.06.001/2009-10 dated Feb 8, 2010 addressed to banks.
V. 4 Assessment of valuation and Liquidity Risk

This section would describe the governance structures and control processes for valuing exposures for risk management and financial reporting purposes, with a special focus on valuation of illiquid positions. This section will have relevant details leading to establishment and verification of valuations for instruments and transactions in which it engages.

V. 5 Stress Testing practices

This section would explain the role of Board and senior management in setting stress testing objectives, defining scenarios, discussing the results of stress tests, assessing potential actions and decision making on the basis of results of stress tests. This section would also describe the rigorous and forward looking stress testing that identifies possible events or changes in market conditions that could adversely affect the AIFI. RBI would assess the effectiveness of AIFIs’ stress testing programme in identifying relevant vulnerabilities.

V. 6 Sound compensation practices

This section should describe the compensation practices followed by the AIFI and how far the compensation practices are linked to long-term capital preservation and the financial strength of the firm. The calculation of risk-adjusted performance measure for the employees and its link, if any, with the compensation should clearly be disclosed in this section.

VI. Key sensitivities and future scenarios

This section would explain how an AIFI would be affected by an economic recession or downswings in the business cycle or markets relevant to its activities. The RBI would like to be apprised as to how an AIFI would manage its business and capital so as to survive a recession while meeting the minimum regulatory standards. The analysis would include future financial projections for, say, three to five years based on business plans and solvency calculations.

For the purpose of this analysis, the severity of the recession reckoned should typically be one that occurs only once in a 25 year period. The time horizon would be from the day of the ICAAP calculation to at least the deepest part of the recession envisaged.

Typical scenarios would include:

- how an economic downturn would affect:
  - the AIFI’s capital funds and future earnings; and
  - the AIFI’s CRAR taking into account future changes in its projected balance sheet.

- In both cases, it would be helpful if these projections show separately the effects of management actions to change the AIFI’s business strategy and the implementation of contingency plans.

- projections of the future CRAR would include the effect of changes in the credit quality of the AIFI’s credit risk counterparties (including migration in their ratings during a recession) and the AIFI’s capital and its credit risk capital requirement;

- an assessment by the AIFI of any other capital planning actions to enable it to continue to meet its regulatory capital requirements throughout a recession such as new capital injections from related companies or new share issues;

- This section would also explain which key macroeconomic factors are being stressed, and how those have been identified as drivers of the AIFI’s earnings. The
AIFI would also explain how the macroeconomic factors affect the key parameters of the internal model by demonstrating, for instance, how the relationship between the two has been established.

VII. Management Actions

This section would elaborate on the management actions assumed in deriving the ICAAP, in particular:

- the quantitative impact of management actions – sensitivity testing of key management actions and revised ICAAP figures with management actions excluded.
- evidence of management actions implemented in the past during similar periods of economic stress.

VII. Aggregation and Diversification

This section would describe how the results of the various separate risk assessments are brought together and an overall view taken on capital adequacy. At a technical level, this would, therefore, require some method to be used to combine the various risks using some appropriate quantitative techniques. At the broader level, the overall reasonableness of the detailed quantification approaches might be compared with the results of an analysis of capital planning and a view taken by senior management as to the overall level of capital that is considered appropriate.

- In enumerating the process of technical aggregation, the following aspects could be covered:
  i) any allowance made for diversification, including any assumed correlations within risks and between risks and how such correlations have been assessed, including in stressed conditions;
  ii) the justification for any credit taken for diversification benefits between legal entities, and the justification for the free movement of capital, if any assumed, between them in times of financial stress;
  iii) the impact of diversification benefits with management actions excluded. It might be helpful to work out revised ICAAP figures with all correlations set to ‘1’ i.e., no diversification; and similar figures with all correlations set to ‘0’ i.e. assuming all risks are independent i.e., full diversification.

- As regards the overall assessment, this should describe how the AIFI has arrived at its overall assessment of the capital it needs taking into account such matters as:
  i) the inherent uncertainty in any modelling approach;
  ii) weaknesses in the AIFI’s risk management procedures, systems or controls;
  iii) the differences between regulatory capital and internal capital; and
  iv) the differing purposes that capital serves: shareholder returns, rating objectives for the AIFI as a whole or for certain debt instruments the AIFI has issued, avoidance of regulatory intervention, protection against uncertain events, depositor protection, working capital, capital held for strategic acquisitions, etc.

VIII. Testing and Adoption of the ICAAP

This section would describe the extent of challenging and testing that the ICAAP has been subjected to. It would thus include the testing and control processes applied to the ICAAP models and calculations. It should also describe the process of review of the test results by the senior management or the Board and the approval of the results by them. A copy of any
relevant report placed before the senior management or the Board of the AIFI in this regard, along with their response, could be attached to the ICAAP Document sent to the RBI.

Details of the reliance placed on any external service providers or consultants in the testing process, for instance, for generating economic scenarios, could also be detailed here.

In addition, a copy of any report obtained from an external reviewer or internal audit should also be sent to the RBI.

IX. Use of the ICAAP within the AIFI

This section would contain information to demonstrate the extent to which the concept of capital management is embedded within the AIFI, including the extent and use of capital modelling or scenario analyses and stress testing within the AIFI's capital management policy. For instance, use of ICAAP in setting pricing and charges and the level and nature of future business, could be an indicator in this regard.

This section could also include a statement of the AIFI's actual operating philosophy on capital management and how this fits in to the ICAAP Document submitted. For instance, differences in risk appetite used in preparing the ICAAP Document vis-à-vis that used for business decisions might be discussed.

Lastly, the AIFIs may also furnish the details of any anticipated future refinements envisaged in the ICAAP (highlighting those aspects which are work-in-progress) apart from any other information that the AIFI believes would be helpful to the RBI in reviewing the ICAAP Document.
Minimum Requirements to Ensure Loss Absorbency of Additional Tier 1 Instruments at Pre-specified Trigger and of All Non-equity Regulatory Capital Instruments at the Point of Non-viability\textsuperscript{172}

1. Introduction

1.1 As indicated in paragraph 4.2.4 of this Chapter, under Basel III non-common equity elements to be included in Tier 1 capital should absorb losses while the AIFI remains a going concern. Towards this end, one of the important criteria for Additional Tier 1 instruments is that these instruments should have principal loss absorption through either (i) conversion into common shares or (ii) a write-down mechanism, which allocates losses to the instrument at an objective pre-specified trigger point.

1.2 During the financial crisis a number of distressed banks were rescued by the public sector injecting funds in the form of common equity and other forms of Tier 1 capital. While this had the effect of supporting depositors it also meant that Tier 2 capital instruments (mainly subordinated debt), and in some cases Tier 1 instruments, did not absorb losses incurred by certain large internationally-active banks that would have failed had the public sector not provided support. Therefore, Basel III requires that the terms and conditions of all non-common Tier 1 and Tier 2 capital instruments issued by a bank must have a provision that requires such instruments, at the option of the relevant authority, to either be written off or converted into common equity upon the occurrence of the trigger event.

1.3 Therefore, in order for an instrument issued by an AIFI to be included in Additional (i.e. non-common) Tier 1 or in Tier 2 capital, in addition to criteria for individual types of non-equity regulatory capital instruments mentioned in Annex 2, 3, 4 and 5, it must also meet or exceed minimum requirements set out in the following paragraphs.

2. Loss Absorption of Additional Tier 1 (AT1) Instruments at the Pre-specified Trigger

I. Loss Absorption Features

2.1 One of the criteria for AT1 capital instruments\textsuperscript{173} requires that these instruments should have principal loss absorption at an objective pre-specified trigger point through either:

(i) conversion to common shares, or

(ii) a write-down mechanism which allocates losses to the instrument.

The write-down will have the following effects:

(a) reduce the claim of the instrument in liquidation;

(b) reduce the amount re-paid when a call is exercised; and

---

\textsuperscript{172} Please refer to paragraph 2 of the circular DBOD No BP BC 38/21.06.201/2014-15 dated September 1, 2014 addressed to banks on Implementation of Basel III Capital Regulations in India-Amendments.

\textsuperscript{173} Please refer to the Appendices 4 & 5 of the circular DBOD No BP BC 98 /21.06.201/2011-12 dated May 2, 2012 addressed to banks on ‘Guidelines on Implementation of Basel III Capital Regulations in India’.
Accordingly, AIFIs may issue AT1 instruments with either conversion\textsuperscript{174} or write-down (temporary or permanent)\textsuperscript{175} mechanism.

\textbf{II. Level of Pre-specified Trigger and Amount of Equity to be Created by Conversion / Write-down}

2.3 The pre-specified trigger for loss absorption through conversion / write-down of Additional Tier 1 instruments (PNCPS and PDI) must be at least Common Equity Tier 1 capital of 6.125\% of RWAs. The Write-down of any Common Equity Tier 1 capital shall not be required before a write-down of any Additional Tier 1 capital instrument.

2.4 The conversion / write-down mechanism (temporary or permanent) which allocates losses to the Additional Tier 1 instruments (AT1) instruments must generate Common Equity Tier 1 (CET1) under applicable Indian Accounting Standards. The instrument will receive recognition in AT1 capital only up to the extent of minimum level of CET1 generated (i.e. net of contingent liability recognised under the Indian Accounting Standards, potential tax liabilities, etc., if any) by a full write-down / conversion of the instrument.

2.5 AIFIs must obtain a certificate from the statutory auditors clearly stating that the conversion / write-down mechanism chosen by the AIFI for a particular AT1 issuance is able to generate CET1 under the prevailing accounting standards\textsuperscript{176}. Further, AIFIs must also obtain an external legal opinion confirming that the conversion or write-down of Additional Tier 1 capital instrument at the pre-specified trigger by the issuing AIFI is legally enforceable. Both reports should be furnished along with reporting of relevant details issuances to the Reserve Bank of India (Department of Regulation).

2.6 The aggregate amount to be written-down / converted for all AT1 instruments on breaching the trigger level must be at least the amount needed to immediately return the AIFI’s CET1 ratio to the trigger level or, if this is not possible, the full principal value of the instruments. Further, the issuer should have full discretion to determine the amount of AT1 instruments to be converted / written-down subject to the amount of conversion/write-down not exceeding the amount which would be required to bring the CET1 ratio to 8\% of RWAs (minimum CET1 of 5.5\% + capital conservation buffer of 2.5\%).

2.7 When an AIFI breaches the pre-specified trigger of loss absorbency of AT1 and the equity is replenished either through conversion or write-down, such replenished amount of equity will be excluded from the total equity of the AIFI for the purpose of determining the proportion of earnings to be paid out as dividend in terms of rules laid down for maintaining capital conservation buffer. However, once the AIFI has attained total Common Equity ratio of 8\% without counting the replenished equity capital, that point onwards, the AIFI may

\textsuperscript{174} Conversion means conversion to common shares.

\textsuperscript{175} When a paid-up instrument is fully and permanently written-down, it ceases to exist resulting in extinguishment of a liability of an AIFI (a non-common equity instrument) and creates CET1. A temporary write-down is different from a conversion and a permanent write-down i.e. the original instrument may not be fully extinguished. Generally, the par value of the instrument is written-down (decrease) on the occurrence of the trigger event and which may be written-up (increase) back to its original value in future depending upon the conditions prescribed in the terms and conditions of the instrument. The amount shown on the balance sheet subsequent to temporary write-down may depend on the precise features of the instrument and the prevailing accounting standards.

\textsuperscript{176} Auditors certificate would be required not only at the time of issuance of the instruments, but also whenever there is a change in accounting norms / standards which may affect the ability of the loss absorbency mechanism of the instrument to create CET1)
include the replenished equity capital for all purposes\textsuperscript{177}.

2.8 The conversion / write-down may be allowed more than once in case an AIFI hits the pre-specified trigger level subsequent to the first conversion / write-down which was partial.

2.9 The conversion / write-down of AT1 instruments are primarily intended to replenish the equity in the event it is depleted by losses. Therefore, AIFIs should not use conversion / write-down of AT1 instruments to support expansion of balance sheet by incurring further obligations / booking assets. Accordingly, an AIFI whose Common Equity ratio slips below 8% due to losses and is still above 6.125% i.e. trigger point, should seek to expand its balance sheet further only by raising fresh equity from its existing shareholders or market and the internal accruals. However, fresh exposures can be taken to the extent of amortization of the existing ones. If any expansion in exposures, such as due to draw down of sanctioned borrowing limits, is inevitable, this should be compensated within the shortest possible time by reducing other exposures\textsuperscript{178}. The AIFI should maintain proper records to facilitate verification of these transactions by its internal auditors, statutory auditors and Inspecting Officers of RBI.

III. Treatment of AT1 Instruments in the event of Winding-Up, Amalgamation, Acquisition, Re-Constitution etc. of the AIFI

2.10 If an AIFI goes into liquidation before the AT1 instruments have been written-down/converted, these instruments will absorb losses in accordance with the order of seniority indicated in the offer document and as per usual legal provisions governing priority of charges.

2.11 If an AIFI goes into liquidation after the AT1 instruments have been written-down, the holders of these instruments will have no claim on the proceeds of liquidation.

2.12 If an AIFI is amalgamated with any other institution before the AT1 instruments have been written-down/converted, these instruments will become part of the corresponding categories of regulatory capital of the new institutions emerging after the merger.

2.13 If an AIFI is amalgamated with any other institution after the AT1 instruments have been written-down temporarily, the amalgamated entity can write-up these instruments as per its discretion.

2.14 If an AIFI is amalgamated with any other institution after the non-equity regulatory capital instruments have been written-down permanently, these cannot be written-up by the amalgamated entity.

2.15 If the relevant authorities decide to reconstitute an AIFI or amalgamate an AIFI with any other institution, such an AIFI will be deemed as non-viable or approaching non-viability and both the pre-specified trigger and the trigger at the point of non-viability\textsuperscript{179} for conversion / write-down of AT1 instruments will be activated. Accordingly, the AT1 instruments will be fully converted / written-down permanently before amalgamation / reconstitution in accordance with these rules.

\textsuperscript{177} If the total CET1 ratio of the AIFI falls again below the 8%, it would include the replenished capital for the purpose of applying the capital conservation buffer framework.

\textsuperscript{178} For the purpose of determination of breach of trigger, the fresh equity, if any, raised after slippage of CET1 below 8% will not be subtracted. In other words, if CET1 of the AIFI now is above the trigger level though it would have been below the trigger had it not raised the fresh equity which it did, the trigger will not be treated as breached.

\textsuperscript{179} As described in subsequent paragraph 3 of this Annex.
IV. **Fixation of Conversion Price, Capping of Number of Shares / Voting Rights**

2.16 AIFIs may issue AT1 instruments with conversion features either based on price fixed at the time of issuance or based on the market price prevailing at the time of conversion\(^{180}\).

2.17 There will be possibility of the debt holders receiving a large number of shares in the event the share price is very low at the time of conversion. Thus, debt holders will end up holding the number of shares and attached voting rights exceeding the legally permissible limits. AIFIs should therefore, always keep sufficient headroom to accommodate the additional equity due to conversion without breaching any of the statutory / regulatory ceilings especially that for maximum private shareholdings and maximum voting rights per investors / group of related investors. In order to achieve this, AIFIs should cap the number of shares and / or voting rights in accordance with relevant laws and regulations on Ownership and Governance of AIFIs. AIFIs should adequately incorporate these features in the terms and conditions of the instruments in the offer document. In exceptional circumstances, if the breach is inevitable, the AIFI should immediately inform the Reserve Bank of India (Department of Regulation) about it. The investors will be required to bring the shareholdings below the statutory / regulatory ceilings within the specific time frame as determined by the Reserve Bank of India.

2.18 In the case of unlisted AIFIs, the conversion price should be determined based on the fair value of the AIFI's common shares to be estimated according to a mutually acceptable methodology which should be in conformity with the standard market practice for valuation of shares of unlisted companies.

2.19 In order to ensure the criteria that the issuing AIFI must maintain at all times all prior authorisation necessary to immediately issue the relevant number of shares specified in the instrument's terms and conditions should the trigger event occur, the capital clause of each AIFI will have to be suitably modified to take care of conversion aspects.

V. **Order of Conversion / Write-down of Various Types of AT1 Instruments**

2.20 AIFIs should clearly indicate in the offer document, the order of conversion / write-down of the instrument in question vis-à-vis other capital instruments which the AIFI has already issued or may issue in future, based on the advice of its legal counsels.

3. **Minimum Requirements to Ensure Loss Absorbency of Non-equity Regulatory Capital Instruments at the Point of Non-Viability**

I. **Mode of Loss Absorption and Trigger Event**

3.1 The terms and conditions of all non-common equity Tier 1 and Tier 2 capital instruments issued by AIFIs in India must have a provision that requires such instruments, at the option of the Reserve Bank of India, to either be written off or converted into common equity upon the occurrence of the trigger event, called the 'Point of Non-Viability (PONV) Trigger' stipulated below:

(i) **The PONV Trigger event is the earlier of:**

   a. a decision that a conversion\(^{181}\) or write-off\(^{182}\), without which the firm would become non-viable, is necessary, as determined by the Reserve Bank of India; and

---

\(^{180}\) Market price here does not mean the price prevailing on the date of conversion; AIFIs can use any pricing formula such as weighted average price of shares during a particular period before conversion.

\(^{181}\) Conversion means full conversion to common shares.

\(^{182}\) Write-off means fully and permanently write-off.
b. the decision to make a public sector injection of capital, or equivalent support, without which the firm would have become non-viable, as determined by the relevant authority.

The Write-off of any Common Equity Tier 1 capital shall not be required before the write-off of any Non-equity (Additional Tier 1 and Tier 2) regulatory capital instrument.

(ii) Such a decision would invariably imply that the write-off or issuance of any new shares as a result of conversion consequent upon the trigger event must occur prior to any public sector injection of capital so that the capital provided by the public sector is not diluted. As such, the contractual terms and conditions of an instrument must not provide for any residual claims on the issuer which are senior to ordinary shares of the AIFI (or group entity where applicable), following a trigger event and when conversion or write-off is undertaken.

(iii) Any compensation paid to the instrument holders as a result of the write-off183 must be paid immediately in the form of common shares.

(iv) The issuing AIFI must maintain at all times all prior authorisation necessary to immediately issue the relevant number of shares specified in the instrument's terms and conditions should the trigger event occur.

(v) In order to ensure that these requirements are met, AIFIs should furnish to RBI (Department of Regulation) an external legal opinion confirming that the conversion or write-off feature of non-equity capital instruments (Additional Tier 1 or Tier 2) by the RBI at the point of non-viability is legally enforceable184. Further, the legal opinion should also confirm that there are no legal impediments to the conversion of the instrument into ordinary shares of the AIFI (or a group entity, where applicable) or write-off upon a trigger event. The RBI may also require the AIFI to submit additional information in order to ensure that such instruments are eligible for inclusion into regulatory capital.

II. A Non-viable AIFI

3.2 For the purpose of these guidelines, a non-viable AIFI will be:

An AIFI which, owing to its financial and other difficulties, may no longer remain a going concern on its own in the opinion of the Reserve Bank unless appropriate measures are taken to revive its operations and thus, enable it to continue as a going concern. The difficulties faced by an AIFI should be such that these are likely to result in financial losses and raising the Common Equity Tier 1 capital of the AIFI should be considered as the most appropriate way to prevent the AIFI from turning non-viable. Such measures would include write-off / conversion of non-equity regulatory capital into common shares in combination with or without other measures as considered appropriate by the Reserve Bank185.

183 Compensation in the form of common shares may be viewed as the simultaneous occurrence of (a) permanent write-off of the original instrument; and (b) creation of new common shares issued in lieu of non-equity capital instrument which is written-off, as compensation for its extinguishment. The precise mechanism may vary under the accounting standards. No compensation (i.e. zero common shares) is paid in case of full and permanent write-off.

184 This may be submitted by AIFIs while reporting of relevant details of issuances of capital instruments to RBI.

185 In rare situations, an AIFI may also become non-viable due to non-financial problems, such as conduct of affairs of the AIFI in a manner which is detrimental to the interest of depositors, serious corporate governance issues, etc. In such situations raising capital is not considered a part of the solution and therefore, may not attract provisions of this framework.
III. Restoring Viability

3.3 An AIFI facing financial difficulties and approaching a PONV will be deemed to achieve viability if within a reasonable time in the opinion of Reserve Bank, it will be able to come out of the present difficulties if appropriate measures are taken to revive it. The measures including augmentation of equity capital through write-off/conversion/public sector injection of funds are likely to:

   a. Restore depositors’/investors’ confidence;
   b. Improve rating/creditworthiness of the AIFI and thereby improve its borrowing capacity and liquidity and reduce cost of funds; and
   c. Augment the resource base to fund balance sheet growth in the case of fresh injection of funds.

IV. Other Requirements to be met by the Non-common Equity Capital Instruments so as to Absorb Losses at the PONV

3.4 Instruments may be issued with either of the following features:

   a. conversion; or
   b. permanent write-off

3.5 The amount of non-equity capital to be converted / written-off will be determined by RBI.

3.6 When an AIFI breaches the PONV trigger and the equity is replenished either through conversion or write-off, such replenished amount of equity will be excluded from the total equity of the AIFI for the purpose of determining the proportion of earnings to be paid out as dividend in terms of rules laid down for maintaining capital conservation buffer. However, once the AIFI has attained total Common Equity ratio of 8% without counting the replenished equity capital, that point onwards, the AIFI may include the replenished equity capital for all purposes.

3.7 The provisions regarding treatment of AT1 instruments in the event of winding-up, amalgamation, acquisition, re-constitution etc. of the AIFI as given in paragraphs 2.10 to 2.15 will also be applicable to all non-common equity capital instruments (AT1 and Tier 2 capital instruments) when these events take place after conversion/write-off at the PONV.

3.8 The provisions regarding fixation of conversion price, capping of number of shares/voting rights applicable to AT1 instruments in terms of paragraphs 2.16 to 2.19 above will also be applicable for conversion of all non-common equity capital instruments (AT1 and Tier 2 capital instruments) at the PONV.

3.9 The provisions regarding order of conversion/write-down of AT1 instruments as given in paragraph 2.20 above will also be applicable for conversion/write-off of all non-common equity capital instruments (AT1 and Tier 2 capital instruments) at the PONV.

V. Criteria to Determine the PONV

3.10 The above framework will be invoked when an AIFI is adjudged by Reserve Bank of India to be approaching the point of non-viability, or has already reached the point of non-

---

186 If the total CET1 ratio of the AIFI falls again below the total Common Equity ratio of 8%, it would include the replenished capital for the purpose of applying the capital conservation buffer framework.
viability, but in the views of RBI:

a) there is a possibility that a timely intervention in form of capital support, with or without other supporting interventions, is likely to rescue the AIFI; and

b) if left unattended, the weaknesses would inflict financial losses on the AIFI and, thus, cause decline in its common equity level.

3.11 The purpose of write-off and/or conversion of non-equity regulatory capital elements will be to shore up the capital level of the AIFI. RBI would follow a two-stage approach to determine the non-viability of an AIFI. The **Stage 1** assessment would consist of purely objective and quantifiable criteria to indicate that there is a *prima facie* case of an AIFI approaching non-viability and, therefore, a closer examination of the AIFI’s financial situation is warranted. The **Stage 2** assessment would consist of supplementary subjective criteria which, in conjunction with the Stage 1 information, would help in determining whether the AIFI is about to become non-viable. These criteria would be evaluated together and not in isolation.

3.12 Once the PONV is confirmed, the next step would be to decide whether rescue of the AIFI would be through write-off/conversion alone or write-off/conversion in conjunction with a public sector injection of funds.

3.13 The trigger at PONV will be evaluated both at consolidated and solo level and breach at either level will trigger conversion/write-off.

3.14 As the capital adequacy is applicable both at solo and consolidated levels, the **minority interests** in respect of capital instruments issued by subsidiaries of AIFIs including overseas subsidiaries, if any, can be included in the consolidated capital of the group only if these instruments have pre-specified triggers (in case of AT1 capital instruments) / loss absorbency at the PONV\(^{187}\) (for all non-common equity capital instruments). In addition, where an AIFI wishes the instrument issued by its subsidiary to be included in the consolidated group’s capital in addition to its solo capital, the terms and conditions of that instrument must specify an additional trigger event.

*This additional trigger event is the earlier of:*

1. a decision that a conversion or write-off, without which the AIFI or the subsidiary would become non-viable, is necessary, as determined by the Reserve Bank of India; and

2. the decision to make a public sector injection of capital, or equivalent support, without which the AIFI or the subsidiary would have become non-viable, as determined by the Reserve Bank of India. Such a decision would invariably imply that the write-off or issuance of any new shares as a result of conversion consequent upon the trigger event must occur prior to any public sector injection of capital so that the capital provided by the public sector is not diluted.

---

\(^{187}\) The cost to the parent of its investment in each subsidiary and the parent’s portion of equity of each subsidiary, at the date on which investment in each subsidiary is made, is eliminated as per **AS-21**. So, in case of wholly-owned subsidiaries, it would not matter whether or not it has same characteristics as the AIFI’s capital. However, in the case of less than wholly owned subsidiaries (or in the case of non-equity regulatory capital of the wholly owned subsidiaries, if issued to the third parties), minority interests constitute additional capital for the banking group over and above what is counted at solo level; therefore, it should be admitted only when it (and consequently the entire capital in that category) has the same characteristics as the AIFI’s capital.
3.15 In such cases, the subsidiary should obtain its regulator’s approval/no-objection for allowing the capital instrument to be converted/written-off at the additional trigger point referred to in paragraph 3.14 above.

3.16 Any common shares paid as compensation to the holders of the instrument must be common shares of either the issuing subsidiary or the parent AIFI (including any successor in resolution).
Annex 15
(cf para 4.3.5)

Calculation of Minority Interest - Illustrative Example

This Annex illustrates the treatment of minority interest and other capital issued out of subsidiaries to third parties, which is set out in paragraph 4.3 of this Chapter.

A group for this purpose consists of two legal entities that are both banks. Bank P is the parent and Bank S is the subsidiary and their unconsolidated balance sheets are set out below:

<table>
<thead>
<tr>
<th>Bank P Balance Sheet</th>
<th>Bank S Balance Sheet</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Assets</strong></td>
<td><strong>Assets</strong></td>
</tr>
<tr>
<td>Loans to customers</td>
<td>Loans to customers</td>
</tr>
<tr>
<td>100</td>
<td>150</td>
</tr>
<tr>
<td>Investment in CET1 of Bank S</td>
<td>7</td>
</tr>
<tr>
<td>Investment in the AT1 of Bank S</td>
<td>4</td>
</tr>
<tr>
<td>Investment in the T2 of Bank S</td>
<td>2</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>Total</strong></td>
</tr>
<tr>
<td>113</td>
<td>150</td>
</tr>
<tr>
<td><strong>Liabilities and equity</strong></td>
<td><strong>Liabilities and equity</strong></td>
</tr>
<tr>
<td>Depositors</td>
<td>Depositors</td>
</tr>
<tr>
<td>70</td>
<td>127</td>
</tr>
<tr>
<td>Tier 2</td>
<td>Tier 2</td>
</tr>
<tr>
<td>10</td>
<td>8</td>
</tr>
<tr>
<td>Additional Tier 1</td>
<td>Additional Tier 1</td>
</tr>
<tr>
<td>7</td>
<td>5</td>
</tr>
<tr>
<td>Common equity</td>
<td>Common equity</td>
</tr>
<tr>
<td>26</td>
<td>10</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>Total</strong></td>
</tr>
<tr>
<td>113</td>
<td>150</td>
</tr>
</tbody>
</table>

The balance sheet of Bank P shows that in addition to its loans to customers, it owns 70% of the common shares of Bank S, 80% of the Additional Tier 1 of Bank S and 25% of the Tier 2 capital of Bank S.

The ownership of the capital of Bank S is therefore as follows:

<table>
<thead>
<tr>
<th>Capital issued by Bank S</th>
<th>Amount issued to parent (Bank P)</th>
<th>Amount issued to third parties</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Common Equity Tier 1 (CET1)</td>
<td>7</td>
<td>3</td>
<td>10</td>
</tr>
<tr>
<td>Additional Tier 1 (AT1)</td>
<td>4</td>
<td>1</td>
<td>5</td>
</tr>
<tr>
<td><strong>Tier 1 (T1)</strong></td>
<td><strong>11</strong></td>
<td><strong>4</strong></td>
<td><strong>15</strong></td>
</tr>
<tr>
<td>Tier 2 (T2)</td>
<td>2</td>
<td>6</td>
<td>8</td>
</tr>
<tr>
<td><strong>Total capital (TC)</strong></td>
<td><strong>13</strong></td>
<td><strong>10</strong></td>
<td><strong>23</strong></td>
</tr>
</tbody>
</table>
Consolidated Balance Sheet

<table>
<thead>
<tr>
<th>Assets</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Loans to customers</td>
<td>Investments of P in S aggregating Rs.13 will be cancelled during accounting consolidation.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Liabilities and equity</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depositors</td>
<td>197</td>
</tr>
<tr>
<td>Tier 2 issued by subsidiary to third parties</td>
<td>6 (8-2)</td>
</tr>
<tr>
<td>Tier 2 issued by parent</td>
<td>10</td>
</tr>
<tr>
<td>Additional Tier 1 issued by subsidiary to third parties</td>
<td>1 (5-4)</td>
</tr>
<tr>
<td>Additional Tier 1 issued by parent</td>
<td>7</td>
</tr>
<tr>
<td>Common equity issued by subsidiary to third parties (i.e. minority interest)</td>
<td>3 (10-7)</td>
</tr>
<tr>
<td>Common equity issued by parent</td>
<td>26</td>
</tr>
<tr>
<td>Total</td>
<td>250</td>
</tr>
</tbody>
</table>

For illustrative purposes Bank S is assumed to have risk weighted assets of 100 against the actual value of assets of 150. In this example, the minimum capital requirements of Bank S and the subsidiary’s contribution to the consolidated requirements are the same. This means that it is subject to the following minimum plus capital conservation buffer requirements and has the following surplus capital:

<table>
<thead>
<tr>
<th>Minimum and surplus capital of Bank S</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum plus capital conservation buffer required$^1$</td>
</tr>
<tr>
<td>1</td>
</tr>
<tr>
<td>Common Equity Tier 1 capital</td>
</tr>
<tr>
<td>Tier 1 capital</td>
</tr>
<tr>
<td>Total capital</td>
</tr>
</tbody>
</table>

The following table illustrates how to calculate the amount of capital issued by Bank S to include in consolidated capital, following the calculation procedure set out in paragraph 4.3.4 of this Chapter:

$^1$ Illustration is based on Basel III minima as indicated in the BCBS document ‘Basel III: A global regulatory framework for more resilient banks and banking systems issued in December 2010 (rev June 2011)’ The Common Equity Tier 1 in the example should be read to include issued common shares plus retained earnings and reserves in Bank S.
Bank S: Amount of capital issued to third parties included in consolidated capital

<table>
<thead>
<tr>
<th></th>
<th>Total amount issued (a)</th>
<th>Amount issued to third parties (b)</th>
<th>Surplus (c)</th>
<th>Surplus attributable to third parties (i.e. amount excluded from consolidated capital) (d) = (c) * (b)/(a)</th>
<th>Amount included in consolidated capital (e) = (b) – (d)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Common Equity Tier 1 capital</td>
<td>10</td>
<td>3</td>
<td>3.0</td>
<td>0.90</td>
<td>2.10</td>
</tr>
<tr>
<td>Tier 1 capital</td>
<td>15</td>
<td>4</td>
<td>6.5</td>
<td>1.73</td>
<td>2.27</td>
</tr>
<tr>
<td>Total capital</td>
<td>23</td>
<td>10</td>
<td>12.5</td>
<td>5.43</td>
<td>4.57</td>
</tr>
</tbody>
</table>

The following table summarises the components of capital for the consolidated group based on the amounts calculated in the table above. Additional Tier 1 is calculated as the difference between Common Equity Tier 1 and Tier 1 and Tier 2 is the difference between Total Capital and Tier 1.

<table>
<thead>
<tr>
<th></th>
<th>Total amount issued by parent (all of which is to be included in consolidated capital)</th>
<th>Amount issued by subsidiaries to third parties to be included in consolidated capital</th>
<th>Total amount issued by parent and subsidiary to be included in consolidated capital</th>
</tr>
</thead>
<tbody>
<tr>
<td>Common Tier 1 capital</td>
<td>26</td>
<td>2.10</td>
<td>28.10</td>
</tr>
<tr>
<td>Additional Tier 1 capital</td>
<td>7</td>
<td>0.17</td>
<td>7.17</td>
</tr>
<tr>
<td>Tier 1 capital</td>
<td>33</td>
<td>2.27</td>
<td>35.27</td>
</tr>
<tr>
<td>Tier 2 capital</td>
<td>10</td>
<td>2.30</td>
<td>12.30</td>
</tr>
<tr>

</tbody>
</table>
Annex 16
(cf para 14.14 & 16.6)

Pillar 3 Disclosure Requirements

1. Scope of Application and Capital Adequacy

Table DF-1: Scope of Application

Name of the head of the group to which the framework applies

(i) Qualitative Disclosures:

<table>
<thead>
<tr>
<th>Name of the entity / Country of incorporation</th>
<th>Whether the entity is included under accounting scope of consolidation (yes / no)</th>
<th>Explain the method of consolidation</th>
<th>Whether the entity is included under regulatory scope of consolidation(^2) (yes / no)</th>
<th>Explain the method of consolidation</th>
<th>Explain the reasons for difference in the method of consolidation</th>
<th>Explain the reasons if consolidated under only one of the scopes of consolidation (^3)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

a. List of group entities considered for consolidation

b. List of group entities not considered for consolidation both under the accounting and regulatory scope of consolidation

<table>
<thead>
<tr>
<th>Name of the entity / country of incorporation</th>
<th>Principle activity of the entity</th>
<th>Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)</th>
<th>% of AIFI's holding in the total equity</th>
<th>Regulatory treatment of AIFI's investments in the capital instruments of the entity</th>
<th>Total balance sheet assets (as stated in the accounting balance sheet of the legal entity)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(ii) Quantitative Disclosures:

c. List of group entities considered for consolidation

<table>
<thead>
<tr>
<th>Name of the entity / country of incorporation</th>
<th>Principle activity of the entity</th>
<th>Total balance sheet equity (as stated in the)</th>
<th>Total balance sheet assets (as stated in the)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

\(^2\) If the entity is not consolidated in such a way as to result in its assets being included in the calculation of consolidated risk-weighted assets of the group, then such an entity is considered as outside the regulatory scope of consolidation.

\(^3\) Also explain the treatment given i.e. deduction or risk weighting of investments under regulatory scope of consolidation.
(as indicated in (i)a. above)

<table>
<thead>
<tr>
<th>Name of the subsidiaries / country of incorporation</th>
<th>Principle activity of the entity</th>
<th>Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)</th>
<th>% of AIFI’s holding in the total equity</th>
<th>Capital deficiencies</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Name of the insurance entities / country of incorporation</th>
<th>Principle activity of the entity</th>
<th>Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)</th>
<th>% of AIFI’s holding in the total equity / proportion of voting power</th>
<th>Quantitative impact on regulatory capital of using risk weighting method versus using the full deduction method</th>
</tr>
</thead>
</table>

f. Any restrictions or impediments on transfer of funds or regulatory capital within the group:

Table DF-2: Capital Adequacy

**Qualitative disclosures**
(a) A summary discussion of the AIFI's approach to assessing the adequacy of its capital to support current and future activities

**Quantitative disclosures**
(b) Capital requirements for credit risk:
• Portfolios subject to standardised approach
• Securitisation exposures

(c) Capital requirements for market risk:
• Standardised duration approach;
  - Interest rate risk
  - Foreign exchange risk (including gold)
  - Equity risk

---

A capital deficiency is the amount by which actual capital is less than the regulatory capital requirement. Any deficiencies which have been deducted on a group level in addition to the investment in such subsidiaries are not to be included in the aggregate capital deficiency.
2. Risk exposure and assessment

The risks to which AIFIs are exposed and the techniques that AIFIs use to identify, measure, monitor and control those risks are important factors market participants consider in their assessment of an institution. In this section, several key risks are considered: credit risk, market risk, and interest rate risk in the banking book and operational risk. Also included in this section are disclosures relating to credit risk mitigation and asset securitisation, both of which alter the risk profile of the institution. Where applicable, separate disclosures are set out for AIFIs using different approaches to the assessment of regulatory capital.

2.1 General qualitative disclosure requirement

For each separate risk area (e.g. credit, market, operational, banking book interest rate risk) AIFIs must describe their risk management objectives and policies, including:

(i) strategies and processes;
(ii) the structure and organisation of the relevant risk management function;
(iii) the scope and nature of risk reporting and/or measurement systems;
(iv) policies for hedging and/or mitigating risk and strategies and processes for monitoring the continuing effectiveness of hedges/mitigants.

Credit risk

General disclosures of credit risk provide market participants with a range of information about overall credit exposure and need not necessarily be based on information prepared for regulatory purposes. Disclosures on the capital assessment techniques give information on the specific nature of the exposures, the means of capital assessment and data to assess the reliability of the information disclosed.

Table DF-3: Credit Risk: General Disclosures for All AIFIs

<table>
<thead>
<tr>
<th>Qualitative Disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) The general qualitative disclosure requirement with respect to credit risk, including:</td>
</tr>
<tr>
<td>Definitions of past due and impaired (for accounting purposes);</td>
</tr>
<tr>
<td>Discussion of the AIFI's credit risk management policy;</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Quantitative Disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>(b) Total gross credit risk exposures(^5), Fund based and Non-fund based separately.</td>
</tr>
<tr>
<td>(c) Geographic distribution of exposures(^6), Fund based and Non-fund based separately</td>
</tr>
<tr>
<td>Overseas</td>
</tr>
<tr>
<td>Domestic</td>
</tr>
<tr>
<td>(d) Industry(^7) type distribution of exposures, fund based and non-fund based separately</td>
</tr>
</tbody>
</table>

---

\(^5\) That is after accounting offsets in accordance with the applicable accounting regime and without taking into account the effects of credit risk mitigation techniques, e.g. collateral and netting.

\(^6\) That is, on the same basis as adopted for Segment Reporting adopted for compliance with AS 17.

\(^7\) The industries break-up may be provided on the same lines as prescribed for DSB returns of banks. If the exposure to any particular industry is more than 5 per cent of the gross credit exposure as computed under (b) above it should be disclosed separately.
(e) Residual contractual maturity breakdown of assets,
(f) Amount of NPAs (Gross)
  - Substandard
  - Doubtful 1
  - Doubtful 2
  - Doubtful 3
  - Loss
(g) Net NPAs
(h) NPA Ratios
  - Gross NPAs to gross advances
  - Net NPAs to net advances
(i) Movement of NPAs (Gross)
  o Opening balance
  o Additions
  o Reductions
  o Closing balance
(j) Movement of provisions (Separate disclosure shall be made for specific provisions and general provisions held by the AIFI with a description of each type of provisions held)
  - Opening balance
  - Provisions made during the period
  - Write-off
  - Write-back of excess provisions
  - Any other adjustments, including transfers between provisions
  - Closing balance
In addition, write-offs and recoveries that have been booked directly to the income statement should be disclosed separately.
(k) Amount of Non-Performing Investments
(l) Amount of provisions held for non-performing investments
(m) Movement of provisions for depreciation on investments
  - Opening balance
  - Provisions made during the period
  - Write-off
  - Write-back of excess provisions
  - Closing balance
(n) By major industry or counterparty type:
  - Amount of NPAs and if available, past due loans, provided separately;
  - Specific and general provisions; and
  - Specific provisions and write-offs during the current period.
In addition, AIFIs are encouraged also to provide an analysis of the ageing of past-due loans.
(o) Amount of NPAs and, if available, past due loans provided separately broken down by significant geographic areas including, if practical, the amounts of specific and general provisions related to each geographical area. The portion of general provisions that is not allocated to a geographical area should be disclosed separately.

---

8 AIFIs shall use the same maturity bands as used for reporting positions in the ALM returns.
Table DF-4 - Credit Risk: Disclosures for Portfolios Subject to the Standardised Approach

| Qualitative Disclosures |  |
|-------------------------|  |
| (a) For portfolios under the standardised approach: |  |
| • Names of credit rating agencies used, plus reasons for any changes; |  |
| • Types of exposure for which each agency is used; and |  |
| • A description of the process used to transfer public issue ratings onto comparable assets in the banking book; |  |

| Quantitative Disclosures |  |
|--------------------------|  |
| (b) For exposure\(^9\) amounts after risk mitigation subject to the standardised approach, amount of an AIFI's outstandings (rated and unrated) in the following three major risk buckets as well as those that are deducted; |  |
| • Below 100 % risk weight |  |
| • 100 % risk weight |  |
| • More than 100 % risk weight |  |
| • Deducted |  |

Table DF-5: Credit Risk Mitigation: Disclosures for Standardised Approaches \(^{10}\)

| Qualitative Disclosures |  |
|-------------------------|  |
| (a) The general qualitative disclosure requirement with respect to credit risk mitigation including: |  |
| a) Policies and processes for, and an indication of the extent to which the AIFI makes use of, on- and off-balance sheet netting; |  |
| • policies and processes for collateral valuation and management; |  |
| • a description of the main types of collateral taken by the AIFI; |  |
| • the main types of guarantor counterparty and their credit worthiness; and |  |
| • information about (market or credit) risk concentrations within the mitigation taken |  |

| Quantitative Disclosures |  |
|--------------------------|  |
| (b) For each separately disclosed credit risk portfolio the total exposure (after, where applicable, on- or off balance sheet netting) that is covered by eligible financial collateral after the application of haircuts. |  |
| (c) For each separately disclosed portfolio the total exposure (after, where applicable, on- or off-balance sheet netting) that is covered by guarantees/credit derivatives (whenever specifically permitted by RBI) |  |

Table DF-6: Securitisation Exposures: Disclosure for Standardised Approach

| Qualitative Disclosures |  |
|-------------------------|  |
| (a) The general qualitative disclosure requirement with respect to securitisation including a discussion of: |  |
| • the AIFI’s objectives in relation to securitisation activity, including the extent to which these activities transfer credit risk of the underlying securitised exposures away from the AIFI to other entities. |  |
| • the nature of other risks (e.g. liquidity risk) inherent in securitised assets; |  |

\(^9\) As defined for disclosures in Table 3.

\(^{10}\) At a minimum, AIFIs must give the disclosures in this Table in relation to credit risk mitigation that has been recognised for the purposes of reducing capital requirements under this Framework. Where relevant, AIFIs are encouraged to give further information about mitigants that have not been recognised for that purpose.
• the various roles played by the AIFI in the securitisation process (For example: originator, investor, servicer, provider of credit enhancement, liquidity provider, swap provider©, protection provider®) and an indication of the extent of the AIFI’s involvement in each of them;
• a description of the processes in place to monitor changes in the credit and market risk of securitisation exposures (for example, how the behaviour of the underlying assets impacts securitisation exposures as defined in paragraph 5.16.1 of this Chapter).
• a description of the AIFI’s policy governing the use of credit risk mitigation to mitigate the risks retained through securitisation exposures;
® An AIFI may have provided support to a securitisation structure in the form of an interest rate swap or currency swap to mitigate the interest rate/currency risk of the underlying assets, if permitted as per regulatory rules.
# An AIFI may provide credit protection to a securitisation transaction through guarantees, credit derivatives or any other similar product, if permitted as per regulatory rules.

(b) **Summary of the AIFI’s accounting policies for securitisation activities, including:**
• whether the transactions are treated as sales or financings;
• methods and key assumptions (including inputs) applied in valuing positions retained or purchased
• changes in methods and key assumptions from the previous period and impact of the changes;
• policies for recognising liabilities on the balance sheet for arrangements that could require the AIFI to provide financial support for securitised assets.

(c) In the banking book, the names of ECAIs used for securitisations and the types of securitisation exposure for which each agency is used.

**Quantitative disclosures: Banking Book**

(d) The total amount of exposures securitised by the AIFI.

(e) For exposures securitised losses recognised by the AIFI during the current period broken by the exposure type (e.g. housing loans etc. detailed by underlying security)

(f) Amount of assets intended to be securitised within a year

(g) Of (f), amount of assets originated within a year before securitisation.

(h) The total amount of exposures securitised (by exposure type) and unrecognised gain or losses on sale by exposure type.

(i) Aggregate amount of:
• on-balance sheet securitisation exposures retained or purchased broken down by exposure type and
• off-balance sheet securitisation exposures broken down by exposure type

(j) (i) Aggregate amount of securitisation exposures retained or purchased and the associated capital charges, broken down between exposures and further broken down into different risk weight bands for each regulatory capital approach
(ii) Exposures that have been deducted entirely from Tier 1 capital, credit enhancing I/Os deducted from total capital, and other exposures deducted from total capital (by exposure type).

**Quantitative Disclosures: Trading book**

(k) Aggregate amount of exposures securitised by the AIFI for which the AIFI has retained some exposures and which is subject to the market risk approach, by exposure type.

(l) Aggregate amount of:
• on-balance sheet securitisation exposures retained or purchased broken
down by exposure type; and
• off-balance sheet securitisation exposures broken down by exposure type.

<table>

<tr>
<td>• Discussion of methodology used to assign economic capital and credit limits for counterparty credit exposures;</td>
</tr>
</tbody>
</table>
• Discussion of policies for securing collateral and establishing credit reserves;
• Discussion of policies with respect to wrong-way risk exposures;
• Discussion of the impact of the amount of collateral the AIFI would have to provide given a credit rating downgrade.

Quantitative Disclosures

(b) Gross positive fair value of contracts, netting benefits\(^{11}\), netted current credit exposure, collateral held (including type, e.g. cash, government securities, etc.), and net derivatives credit exposure\(^{12}\). Also report measures for exposure at default, or exposure amount, under CEM. The notional value of credit derivative hedges, and the distribution of current credit exposure by types of credit exposure\(^{13}\).

(c) Credit derivative transactions that create exposures to CCR (notional value), segregated between use for the institution’s own credit portfolio, as well as in its intermediation activities, including the distribution of the credit derivatives products used\(^{14}\), broken down further by protection bought and sold within each product group.

3 Composition of Capital Disclosure Templates

3.1 Disclosure Template

(i) The template is designed to capture the capital positions of AIFIs. Certain rows are in italics. These rows will be deleted after all the ineligible capital instruments have been fully phased out (i.e. from April 1, 2028 onwards).

(ii) The reconciliation requirement in terms of paragraph 14.13 of this Chapter results in the decomposition of certain regulatory adjustments. For example, the disclosure template below includes the adjustment of ‘Goodwill net of related tax liability’. The requirements will lead to the disclosure of both the goodwill component and the related tax liability component of this regulatory adjustment.

(iii) Certain rows of the template are shaded as explained below:

   a. each dark grey row introduces a new section detailing a certain component of regulatory capital.
   b. the light grey rows with no thick border represent the sum cells in the relevant section.
   c. the light grey rows with a thick border show the main components of regulatory capital and the capital ratios.

---

\(^{11}\) Please refer to the circular DBOD.No.BP.BC.48/21.06.001/2010-11 dated October 1, 2010 addressed to banks.

\(^{12}\) Net credit exposure is the credit exposure on derivatives transactions after considering both the benefits from legally enforceable netting agreements and collateral arrangements. The notional amount of credit derivative hedges alerts market participants to an additional source of credit risk mitigation.

\(^{13}\) For example, interest rate contracts, FX contracts, credit derivatives, and other contracts.

\(^{14}\) For example, credit default swaps.
Also provided along with the Table, an explanation of each line of the template, with references to the appropriate paragraphs of the text of this Chapter.

15 Not Applicable to AIFIs.

16 In terms of Basel III rules text issued by the Basel Committee (December 2010), DTAs that rely on future profitability of the AIFI to be realized are to be deducted. DTAs which relate to temporary differences are to be treated under the “threshold deductions” as set out in paragraph 87. However, AIFIs in India are required to deduct all DTAs, irrespective of their origin, from CET1 capital.
outside the scope of regulatory consolidation, net of eligible short positions, where the AIFI does not own more than 10% of the issued share capital (amount above 10% threshold)

\(^1\) Only significant investments other than in the insurance and non-financial subsidiaries should be reported here. The insurance and non-financial subsidiaries are not consolidated for the purpose of capital adequacy. The equity and other regulatory capital investments in insurance subsidiaries are fully deducted from consolidated regulatory capital of the group. However, in terms of Basel III rules text of the Basel Committee, insurance subsidiaries are included under significant investments and thus, deducted based on 10% threshold rule instead of full deduction.

\(^2\) Not applicable in Indian context.

\(^1^\) Please refer to Footnote 16 above.

\(^2\) Not applicable in Indian context.

\(^2\) Adjustments which are not specific to the Basel III regulatory adjustments (as prescribed by the Basel Committee) will be reported under this row. However, regulatory adjustments which are linked to Basel III i.e. where there is a change in the definition of the Basel III regulatory adjustments, the impact of these changes will be explained in the Notes of this disclosure template.

\(^2\) Non-financial subsidiaries are not consolidated for the purpose of capital adequacy. The equity and other regulatory capital investments in the non-financial subsidiaries are deducted from consolidated regulatory capital of the group. These investments are not required to be deducted fully from capital under Basel III rules text of the Basel Committee.

\(^2\) Please refer to paragraph 3.3.5 of this Chapter. Please also refer to the Paragraph 34 of the Basel II Framework issued by the Basel Committee (June 2006). Though this is not national specific adjustment, it is reported here.

</tbody>
</table>
to the capital conservation buffer), i.e. AIFIs will report 2.5% here.

66) The amount in row 64 (expressed as a percentage of risk weighed assets) that relates to the AIFI specific countercyclical buffer requirement.

67) Not relevant

68) Common Equity Tier 1 (as a percentage of risk-weighted assets) available to meet the buffers after meeting the AIFI’s minimum capital requirements. To be calculated as the CET1 ratio of the AIFI, less any common equity (as a percentage of risk-weighted assets) used to meet the AIFI’s minimum CET1, minimum Tier 1 and minimum Total capital requirements.

69) National Common Equity Tier 1 minimum ratio (if different from Basel III minimum). 5.5% should be reported.

70) National Tier 1 minimum ratio (if different from Basel III minimum). 7% should be reported.

71) National total capital minimum ratio (if different from Basel III minimum). 9% should be reported.

72) Non-significant investments in the capital of other financial entities, the total amount of such holdings that are not reported in row 18, row 39 and row 54.

73) Significant investments in the common stock of financial entities, the total amount of such holdings that are not reported in row 19.

74) Mortgage servicing rights, the total amount of such holdings that are not reported in row 19 and row 23. - Not Applicable in India.

75) Deferred tax assets arising from temporary differences, the total amount of such holdings that are not reported in row 21 and row 25. – Not applicable in India.

76) Provisions eligible for inclusion in Tier 2 in respect of exposures subject to standardised approach calculated in accordance paragraph 4.2.5 of this Chapter, prior to the application of the cap.

77) Cap on inclusion of provisions in Tier 2 under standardised approach calculated in accordance paragraph 4.2.5 of this Chapter.

78) Provisions eligible for inclusion in Tier 2 in respect of exposures subject to internal ratings-based approach calculated in accordance paragraph 4.2.5 of this Chapter.

79) Cap for inclusion of provisions in Tier 2 under internal ratings-based approach calculated in accordance paragraph 4.2.5 of this Chapter.

80) Current cap on CET1 instruments subject to phase out arrangements see paragraph 4.5 of this Chapter.

81) Amount excluded from CET1 due to cap (excess over cap after redemptions and maturities), see paragraph 4.5 of this Chapter.

82) Current cap on AT1 instruments subject to phase out arrangements see paragraph 4.5 of this Chapter.

83) Amount excluded from AT1 due to cap (excess over cap after redemptions and maturities) see paragraph 4.5 of this Chapter.

84) Current cap on T2 instruments subject to phase out arrangements see paragraph 4.5 of this Chapter.

85) Amount excluded from T2 due to cap (excess over cap after redemptions and maturities) see paragraph 4.5 of this Chapter.

### 3.2 Three Step Approach to Reconciliation Requirements

**Step 1**

Under Step 1, AIFIs are required to take their balance sheet in their financial statements (numbers reported the middle column below) and report the numbers when the regulatory scope of consolidation is applied (numbers reported in the right hand column below). If there are rows in the regulatory consolidation balance sheet that are not present in the published financial statements, AIFIs are required to give a value of zero in the middle column and
furnish the corresponding amount in the column meant for regulatory scope of consolidation. AIFIs may however, indicate what the exact treatment is for such amount in the balance sheet.

Table DF-12: Composition of Capital- Reconciliation Requirements

<table>

### A Capital & Liabilities

#### i Paid-up Capital
- Reserves & Surplus
- Minority Interest
- Total Capital

#### ii Deposits
- of which: Deposits from banks
- of which: Customer deposits
- of which: Other deposits (pl. specify)

#### iii Borrowings
- of which: From RBI
- of which: From banks
- of which: From other institutions & agencies
- of which: Others (pl. specify)
- of which: Capital instruments

#### iv Other liabilities & provisions

**Total**

### B Assets

#### i Cash and balances with Reserve Bank of India
- Balance with banks and money at call and short notice

#### ii Investments:
- of which: Government securities
- of which: Other approved securities
- of which: Shares
- of which: Debentures & Bonds
- of which: Subsidiaries / Joint Ventures / Associates
- of which: Others (Commercial Papers, Mutual Funds etc.)

#### iii Loans and advances
- of which: Loans and advances to banks
- of which: Loans and advances to customers
### Step 2

Under Step 2 AIFIs are required to expand the regulatory-scope balance sheet (revealed in Step 1) to identify all the elements that are used in the definition of capital disclosure template set out in Table DF-11). Set out below are some examples of elements that may need to be expanded for a particular group. The more complex the balance sheet of the AIFI, the more items would need to be disclosed. Each element must be given a reference number/letter that can be used in Step 3.

<table>
<thead>
<tr>

<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

**Step 3:** Under Step 3 AIFIs are required to complete a column added to the Table DF-11) disclosure template to show the source of every input.

(i) For example, the definition of capital disclosure template includes the line “goodwill net of related deferred tax liability”. Next to the disclosure of this item in the disclosure template under Table DF-11), the AIFI would be required to put ‘a – c’ to show that row 8 of the template has been calculated as the difference between component ‘a’ of the balance sheet under the regulatory scope of consolidation, illustrated in step 2, and component ‘c’.

---

Extract of Basel III common disclosure template (with added column) – Table DF-11)"
**Common Equity Tier 1 capital: instruments and reserves**

<table>
<thead>
<tr>
<th>Component of regulatory capital reported by AIFI</th>
<th>Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation from step 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Directly issued qualifying common share (and equivalent for non-joint stock companies) capital plus related stock surplus</td>
<td>e</td>
</tr>
<tr>
<td>2 Retained earnings</td>
<td></td>
</tr>
<tr>
<td>3 Accumulated other comprehensive income (and other reserves)</td>
<td></td>
</tr>
<tr>
<td>4 Directly issued capital subject to phase out from CET1 (only applicable to non-joint stock companies)</td>
<td></td>
</tr>
<tr>
<td>5 Common share capital issued by subsidiaries and held by third parties (amount allowed in group CET1)</td>
<td></td>

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
</tr>
</thead>
</table>
| 9      | Specifies accounting classification. Helps to assess loss absorbency.  
**Select from menu:** [Shareholders’ equity] [Liability] [Non-controlling interest in consolidated subsidiary] |
| 10     | Specifies date of issuance.  
**Free text** |
| 11     | Specifies whether dated or perpetual.  
**Select from menu:** [Perpetual] [Dated] |
| 12     | For dated instrument, specifies original maturity date (day, month and year). For perpetual instrument put “no maturity”.  
**Free text** |
| 13     | Specifies whether there is an issuer call option. Helps to assess permanence.  
**Select from menu:** [Yes] [No] |
| 14     | For instrument with issuer call option, specifies first date of call if the instrument has a call option on a specific date (day, month and year) and, in addition, specifies if the instrument has a tax and/or regulatory event call. Also specifies the redemption price. Helps to assess permanence.  
**Free text** |
| 15     | Specifies the existence and frequency of subsequent call dates, if applicable. Helps to assess permanence.  
**Free text** |
| 16     | Specifies whether the coupon/dividend is fixed over the life of the instrument, floating over the life of the instrument, currently fixed but will move to a floating rate in the future, currently floating but will move to a fixed rate in the future.  
**Select from menu:** [Fixed], [Floating] [Fixed to floating], [Floating to fixed] |
| 17     | Specifies the coupon rate of the instrument and any related index that the coupon/dividend rate references.  
**Free text** |
| 18     | Specifies whether the non-payment of a coupon or dividend on the instrument prohibits the payment of dividends on common shares (i.e. whether there is a dividend stopper).  
**Select from menu:** [Yes] [No] |
| 19     | Specifies whether the issuer has full discretion, partial discretion or no discretion over whether a coupon/dividend is paid. If the AIFI has full discretion to cancel coupon/dividend payments under all circumstances it must select “fully discretionary” (including when there is a dividend stopper that does not have the effect of preventing the AIFI from cancelling payments on the instrument). If there are conditions that must be met before payment can be cancelled (e.g. capital below a certain threshold), the AIFI must select “partially discretionary”. If the AIFI is unable to cancel the payment outside of insolvency the AIFI must select “mandatory”.  
**Select from menu:** [Fully discretionary] [Partially discretionary] [Mandatory] |
| 20     | Specifies whether there is a step-up or other incentive to redeem.  
**Select from menu:** [Yes] [No] |
| 21     | Specifies whether dividends / coupons are cumulative or noncumulative.  
**Select from menu:** [Noncumulative] [Cumulative] |
| 22     | Specifies whether instrument is convertible or not. Helps to assess loss absorbency.  
**Select from menu:** [Convertible] [Nonconvertible] |
| 23     | Specifies the conditions under which the instrument will convert, including point of non-viability. Where one or more authorities have the ability to trigger conversion, the authorities should be listed. For each of the authorities it should be stated whether it is the terms of the contract of the instrument that provide the legal basis for the authority to trigger conversion (a contractual approach) or whether the legal basis is provided by statutory means (a statutory approach).  
**Free text** |
| 24     | Specifies whether the instrument will always convert fully, may convert fully or partially, or will always convert partially |
### Table DF-14: Full Terms and Conditions of Regulatory Capital Instruments

<table>
<thead>
<tr>

<th>Full Terms and Conditions</th>
</tr>
</thead>
</table>

### 3.4 Full Terms and Conditions of Regulatory Capital Instruments

Under this template, AIFIs are required to disclose the full terms and conditions of all instruments included in the regulatory capital.

### 3.5 Disclosure Requirements for Remuneration

Please refer to the ‘Guidelines on Compensation of Whole Time Directors/ Chief Executive’
Officers/ Material Risk Takers and Control Function staff’ issued vide circular DOR.Appt.BC.No.23/29.67.001/2019-20 dated November 4, 2019 addressed to All Private Sector Banks (including Local Area Banks, Small Finance Banks, Payments Banks) and Foreign Banks operating in India. Private sector AIFIs, if any, shall be required to make disclosure on remuneration on an annual basis at the minimum, in their Annual Financial Statements as per the template given below:

Table DF-15: Disclosure Requirements for Remuneration

<table>
<thead>
<tr>
<th>Remuneration</th>
<th>Qualitative disclosures</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Information relating to the bodies that oversee remuneration. Disclosure</td>
<td></td>
</tr>
<tr>
<td>should include:</td>
<td></td>
</tr>
<tr>
<td>• Name, composition and mandate of the main body overseeing remuneration.</td>
<td></td>
</tr>
<tr>
<td>• External consultants whose advice has been sought, the body by which they</td>
<td></td>
</tr>
<tr>
<td>were commissioned, and in what areas of the remuneration process.</td>
<td></td>
</tr>
<tr>
<td>• A description of the scope of the AIFI’s remuneration policy (eg. by regions,</td>
<td></td>
</tr>
<tr>
<td>business lines), including the extent to which it is applicable to foreign</td>
<td></td>
</tr>
<tr>
<td>subsidiaries and branches.</td>
<td></td>
</tr>
<tr>
<td>• A description of the type of employees covered and number of such employees.</td>
<td></td>
</tr>
<tr>
<td>(b) Information relating to the design and structure of remuneration processes.</td>
<td></td>
</tr>
<tr>
<td>Disclosure should include:</td>
<td></td>
</tr>
<tr>
<td>• An overview of the key features and objectives of remuneration policy.</td>
<td></td>
</tr>
<tr>
<td>• Whether the remuneration committee reviewed the firm’s remuneration policy</td>
<td></td>
</tr>
<tr>
<td>during the past year, and if so, an overview of any changes that were made.</td>
<td></td>
</tr>
<tr>
<td>• A discussion of how the AIFI ensures that risk and compliance employees are</td>
<td></td>
</tr>
<tr>
<td>remunerated independently of the businesses they oversee.</td>
<td></td>
</tr>
<tr>
<td>(c) Description of the ways in which current and future risks are taken into</td>
<td></td>
</tr>
<tr>
<td>account in the remuneration processes. Disclosure should include:</td>
<td></td>
</tr>
<tr>
<td>• An overview of the key risks that the AIFI takes into account when</td>
<td></td>
</tr>
<tr>
<td>implementing remuneration measures.</td>
<td></td>
</tr>
<tr>
<td>• An overview of the nature and type of key measures used to take account of</td>
<td></td>
</tr>
<tr>
<td>these risks, including risk difficult to measure (values need not be disclosed).</td>
<td></td>
</tr>
<tr>
<td>• A discussion of the ways in which these measures affect remuneration.</td>
<td></td>
</tr>
<tr>
<td>• A discussion of how the nature and type of these measures have changed over</td>
<td></td>
</tr>
<tr>
<td>the past year and reasons for the changes, as well as the impact of changes on</td>
<td></td>
</tr>
<tr>
<td>remuneration.</td>
<td></td>
</tr>
</tbody>
</table>
### (d) Description of the ways in which the AIFI seeks to link performance during a performance measurement period with levels of remuneration.

Disclosure should include:
- An overview of main performance metrics for AIFI, top level business lines and individuals.
- A discussion of how amounts of individual remuneration are linked to the AIFI-wide and individual performance.
- A discussion of the measures the AIFI will in general implement to adjust remuneration in the event that performance metrics are weak. This should include the AIFI’s criteria for determining ‘weak’ performance metrics.

### (e) Description of the ways in which the AIFI seeks to adjust remuneration to take account of the longer term performance. Disclosure should include:
- A discussion of the AIFI’s policy on deferral and vesting of variable remuneration and, if the fraction of variable remuneration that is deferred differs across employees or groups of employees, a description of the factors that determine the fraction and their relative importance.
- A discussion of the AIFI’s policy and criteria for adjusting deferred remuneration before vesting and (if permitted by national law) after

### (f) Description of the different forms of variable remuneration that the AIFI utilizes and the rationale for using these different forms.

Disclosure should include:
- An overview of the forms of variable remuneration offered.
- A discussion of the use of different forms of variable remuneration and, if the mix of different forms of variable remuneration differs across employees or group of employees, a description of the factors that determine the mix and their relative importance.

#### Quantitative disclosures

**Table DF-16: Equities – Disclosure for Banking Book Positions**

**Qualitative Disclosures**

1. The general qualitative disclosure requirement (Para 2.1 of this annex) with respect to equity risk, including:
   - differentiation between holdings on which capital gains are expected and those taken under other objectives including for relationship and strategic reasons; and
   - discussion of important policies covering the valuation and accounting of equity holdings in the banking book. This includes the accounting techniques and valuation methodologies used, including key assumptions and practices affecting valuation as well as significant changes in these practices.

**Quantitative Disclosures**

1. Value disclosed in the balance sheet of investments, as well as the fair value of those investments; for quoted securities, a comparison to publicly quoted share values where the share price is materially different from fair value.

2. The types and nature of investments, including the amount that can be classified as:
   - Publicly traded; and
   - Privately held.

3. The cumulative realised gains (losses) arising from sales and liquidations in the...
reporting period.

4. Total unrealised gains (losses)\(^{27}\)

5. Total latent revaluation gains (losses)\(^{28}\)

6. Any amounts of the above included in Tier 1 and/or Tier 2 capital.

7. Capital requirements broken down by appropriate equity groupings, consistent with the AIFI’s methodology, as well as the aggregate amounts and the type of equity investments subject to any supervisory transition or grandfathering provisions regarding regulatory capital requirements.

4. Leverage Ratio Disclosures

(i) The scope of consolidation of the Basel III leverage ratio as set out in paragraph 16.2.2 may be different from the scope of consolidation of the published financial statements. Also, there may be differences between the measurement criteria of assets on the accounting balance sheet in the published financial statements relative to measurement criteria of the leverage ratio (e.g. due to differences of eligible hedges, netting or the recognition of credit risk mitigation). Further, in order to adequately capture embedded leverage, the framework incorporates both on- and off-balance sheet exposures.

(ii) The templates set out below are designed to be flexible enough to be used under any accounting standard, and are consistent yet proportionate, varying with the complexity of the balance sheet of the reporting AIFI\(^{29}\).

4.1 Summary comparison table

4.1.1 Applying values at the end of period (e.g. quarter-end), AIFIs must report a reconciliation of their balance sheet assets from their published financial statements with the leverage ratio exposure measure as shown in Table DF-16 below. Specifically:

- line 1 should show the AIFI’s total consolidated assets as per published financial statements;
- line 2 should show adjustments related to investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes, but outside the scope of regulatory consolidation as set out in paragraphs 16.2.3 and 16.4.2.2;
- line 3 should show adjustments related to any fiduciary assets recognised on the balance sheet pursuant to the AIFI’s operative accounting framework but excluded from the leverage ratio exposure measure, as described in footnote 126 of this Chapter;
- lines 4 and 5 should show adjustments related to derivative financial instruments and securities financing transactions (i.e. repos and other similar secured lending), respectively;

---

\(^{27}\) Unrealised gains (losses) recognised in the balance sheet but not through the profit and loss account.

\(^{28}\) Unrealised gains (losses) not recognised either in the balance sheet or through the profit and loss account.

\(^{29}\) Specifically, a common template is set out. However, with respect to reconciliation, AIFIs are to qualitatively reconcile any material difference between total balance sheet assets in their reported financial statements and on-balance sheet exposures as prescribed in the leverage ratio.
line 6 should show the credit equivalent amount of OBS items, as determined under paragraph 16.4.5.2;

line 7 should show any other adjustments; and

line 8 should show the leverage ratio exposure, which should be the sum of the previous items. This should also be consistent with line 22 of Table DF-17 below.

**Table DF-17 - Summary comparison of accounting assets vs. leverage ratio exposure measure**

**4.2 Common disclosure template and explanatory table, reconciliation and other requirements**

**4.2.1** AIFIs must report, in accordance with Table DF-17 below, and applying values at the end of period (e.g. quarter-end), a breakdown of the following exposures under the leverage ratio framework: (i) on-balance sheet exposures; (ii) derivative exposures; (iii) SFT exposures; and (iv) OBS items. AIFIs must also report their Tier 1 capital, total exposures and the leverage ratio.

**4.2.2** The Basel III leverage ratio for the quarter, expressed as a percentage and calculated according to paragraph 16.2, is to be reported in line 22.

**4.2.3** Reconciliation with public financial statements: AIFIs are required to disclose and detail the source of material differences between their total balance sheet assets (net of on-balance sheet derivative and SFT assets) as reported in their financial statements and
their on-balance sheet exposures in line 1 of the common disclosure template.

4.2.4 Material periodic changes in the leverage ratio: AIFIs are required to explain the key drivers of material changes in their Basel III leverage ratio observed from the end of the previous reporting period to the end of the current reporting period (whether these changes stem from changes in the numerator and/or from changes in the denominator).

4.2.6 To ensure that the summary comparison table, common disclosure template and explanatory table remain comparable across jurisdictions, there should be no adjustments made by AIFIs to disclose their leverage ratio. AIFIs are not permitted to add, delete or change the definitions of any rows from the summary comparison table and common disclosure template implemented in their jurisdiction. This will prevent a divergence of tables and templates that could undermine the objectives of consistency and comparability.
Requirements for Recognition of Net Replacement Cost in Close-out Netting Sets

A. For repo-style transactions

The effects of bilateral netting agreements covering repo-style transactions will be recognised on a counterparty-by-counterparty basis if the agreements are legally enforceable in each relevant jurisdiction upon the occurrence of an event of default and regardless of whether the counterparty is insolvent or bankrupt. In addition, netting agreements must:

a) provide the non-defaulting party the right to terminate and close-out in a timely manner all transactions under the agreement upon an event of default, including in the event of insolvency or bankruptcy of the counterparty;

b) provide for the netting of gains and losses on transactions (including the value of any collateral) terminated and closed out under it so that a single net amount is owed by one party to the other;

c) allow for the prompt liquidation or setoff of collateral upon the event of default; and

d) be, together with the rights arising from the provisions required in (a) to (c) above, legally enforceable in each relevant jurisdiction upon the occurrence of an event of default and regardless of the counterparty's insolvency or bankruptcy.

B. For Derivatives transactions

(a) AIFIs may net transactions subject to novation under which any obligation between an AIFI and its counterparty to deliver a given currency on a given value date is automatically amalgamated with all other obligations for the same currency and value date, legally substituting one single amount for the previous gross obligations.

(b) AIFIs may also net transactions subject to any legally valid form of bilateral netting not covered in (a), including other forms of novation.

(c) In both cases (a) and (b), an AIFI will need to satisfy that it has:

(i) A netting contract or agreement with the counterparty which creates a single legal obligation, covering all included transactions, such that the AIFI would have either a claim to receive or obligation to pay only the net sum of the positive and negative mark-to-market values of included individual transactions in the event a counterparty fails to perform due to any of the following: default, bankruptcy, liquidation or similar circumstances;

(ii) Written and reasoned legal opinions that, in the event of a legal challenge, the relevant courts and administrative authorities would find the AIFI's exposure to be such a net amount under:

- The law of the jurisdiction in which the counterparty is chartered and, if the foreign branch of a counterparty is involved, then also under the law of the jurisdiction in which the branch is located;
- The law that governs the individual transactions; and
- The law that governs any contract or agreement necessary to effect the netting.

(iii) Procedures in place to ensure that the legal characteristics of netting arrangements are kept under review in the light of possible changes in relevant law.

(d) Contracts containing walkaway clauses will not be eligible for netting for the purpose of calculating capital requirements under these guidelines. A walkaway clause is a provision which permits a non-defaulting counterparty to make only limited payments or no payment at all, to the estate of a defaulter, even if the defaulter is a net creditor.
## GLOSSARY

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Asset</strong></td>
<td>An asset is anything of value that is owned by a person or business.</td>
</tr>
<tr>
<td><strong>Available for Sale</strong></td>
<td>The securities available for sale are those securities where the intention of the AIFI is neither to trade nor to hold till maturity. These securities are valued at the fair value which is determined by reference to the best available source of current market quotations or other data relative to current value.</td>
</tr>
<tr>
<td><strong>Balance Sheet</strong></td>
<td>A balance sheet is a financial statement of the assets and liabilities of a trading concern, recorded at a particular point in time.</td>
</tr>
<tr>
<td><strong>Banking Book</strong></td>
<td>The banking book comprises assets and liabilities, which are contracted basically on account of relationship or for steady income and statutory obligations and are generally held till maturity.</td>
</tr>
<tr>
<td><strong>Basel Committee on Banking Supervision</strong></td>
<td>The Basel Committee is a committee of bank supervisors consisting of members from each of the G10 countries. The Committee is a forum for discussion on the handling of specific supervisory problems. It coordinates the sharing of supervisory responsibilities among national authorities in respect of banks' foreign establishments with the aim of ensuring effective supervision of banks' activities worldwide. Update with latest</td>
</tr>
<tr>
<td><strong>Basic Indicator Approach</strong></td>
<td>An operational risk measurement technique permitted under Basel II. The approach sets a charge for operational risk as a fixed percentage (“alpha factor”) of a single indicator. The indicator serves as a proxy for the AIFI's risk exposure.</td>
</tr>
<tr>
<td><strong>Basis Risk</strong></td>
<td>The risk that the interest rate of different assets, liabilities and off-balance sheet items may change in different magnitude is termed as basis risk.</td>
</tr>
<tr>
<td><strong>Capital</strong></td>
<td>Capital refers to the funds (e.g., money, loans, equity, etc.) which are available to carry on a business, make an investment, and generate future revenue. Capital also refers to physical assets which can be used to generate future returns.</td>
</tr>
</tbody>
</table>
| **Capital adequacy**        | A measure of the adequacy of an entity's capital resources in relation to its current liabilities and also in relation to the risks associated with its assets.  
An appropriate level of capital adequacy ensures that the entity has sufficient capital to support its activities and that its net worth is sufficient to absorb adverse changes in the value of its assets without becoming insolvent. For example, under BIS (Bank for International Settlements) rules, banks are required to maintain a certain level of capital against their risk-adjusted assets. |
| **Capital reserves**        | That portion of a company's profits not paid out as dividends to shareholders. They are also known as undistributable reserves. |
| **Convertible Bond**        | A bond giving the investor the option to convert the bond into equity at a fixed conversion price or as per a pre-determined pricing formula. |
| **Credit risk**             | Risk that a party to a contractual agreement or transaction will be unable to meet their obligations or will default on commitments. Credit risk can be associated with almost any transaction or instrument such as swaps, repos, CDs, foreign exchange transactions, etc.  
Specific types of credit risk include sovereign risk, country risk, legal or force majeure risk, marginal risk and settlement risk. |
| **Debentures**              | Bonds issued by a company bearing a fixed rate of interest usually payable half yearly on specific dates and principal amount repayable on a particular date on redemption of the debentures. |
### Deferred Tax Assets
Unabsorbed depreciation and carry forward of losses which can be set-off against future taxable income which is considered as timing differences result in deferred tax assets. The deferred Tax Assets are accounted as per the Accounting Standard 22.

Deferred Tax Assets have an effect of decreasing future income tax payments, which indicates that they are prepaid income taxes and meet definition of assets. Whereas deferred tax liabilities have an effect of increasing future year's income tax payments, which indicates that they are accrued income taxes and meet definition of liabilities.

### Delta ($\Delta$)
The delta of an option / a portfolio of options is the rate of change in the value of the option / portfolio with respect to change in the price of the asset(s) underlying the option(s).

### Derivative
A derivative instrument derives much of its value from an underlying product. Examples of derivatives include futures, options, forwards and swaps. For example, a forward contract can be derived from the spot currency market and the spot markets for borrowing and lending. In the past, derivative instruments tended to be restricted only to those products which could be derived from spot markets. However, today the term seems to be used for any product that can be derived from any other.

### Duration
Duration (Macaulay duration) measures the price volatility of fixed income securities. It is often used in the comparison of the interest rate risk between securities with different coupons and different maturities. It is the weighted average of the present value of all the cash flows associated with a fixed income security. It is expressed in years. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

### Foreign Institutional Investor
An institution established or incorporated outside India which proposes to make investment in India securities; provided that a domestic asset management company or domestic portfolio manager who manages funds raised or collected or brought from outside India for investment in India on behalf of a sub-account, shall be deemed to be a Foreign Institutional Investor.

### Forward Contract
A forward contract is an agreement between two parties to buy or sell an agreed amount of a commodity or financial instrument at an agreed price, for delivery on an agreed future date. In contrast to a futures contract, a forward contract is not transferable or exchange tradable, its terms are not standardized and no margin is exchanged. The buyer of the forward contract is said to be long the contract and the seller is said to be short the contract.

### Gamma ($\Gamma$)
The gamma of an option / portfolio of options is the rate of change of the option's / portfolio’s delta with respect to the change in the price of the asset(s) underlying the option (s).

### General provisions & loss reserves
Such reserves, if they are not attributable to the actual diminution in value or identifiable potential loss in any specific asset and are available to meet unexpected losses, can be included in Tier II capital.

### General market risk
Risk that relates to overall market conditions while specific risk is risk that relates to the issuer of a particular security.

### Hedging
Taking action to eliminate or reduce exposure to risk.

### Held for Trading
Securities where the intention is to trade by taking advantage of short-term price / interest rate movements.

### Horizontal Disallowance
A disallowance of offsets to required capital used the BIS Method for assessing market risk for regulatory capital. In order to calculate the capital required for interest rate risk of a trading portfolio, the BIS Method allows offsets of long and short positions. Yet interest rate risk of instruments at
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interest rate risk</td>
<td>Risk that the financial value of assets or liabilities (or inflows/outflows) will be altered because of fluctuations in interest rates. For example, the risk that future investment may have to be made at lower rates and future borrowings at higher rates.</td>
</tr>
<tr>
<td>Long Position</td>
<td>A long position refers to a position where gains arise from a rise in the value of the underlying.</td>
</tr>
<tr>
<td>Market risk</td>
<td>Risk of loss arising from movements in market prices or rates away from the rates or prices set out in a transaction or agreement.</td>
</tr>
<tr>
<td>Modified Duration</td>
<td>The modified duration or volatility of an interest bearing security is its Macaulay duration divided by one plus the coupon rate of the security. It represents the percentage change in a securities’ price for a 100 basis points change in yield. It is generally accurate for only small changes in the yield.</td>
</tr>
<tr>
<td>Mortgage-backed security</td>
<td>A bond-type security in which the collateral is provided by a pool of mortgages. Income from the underlying mortgages is used to meet interest and principal repayments.</td>
</tr>
<tr>
<td>Mutual Fund</td>
<td>Mutual Fund is a mechanism for pooling the resources by issuing units to the investors and investing funds in securities in accordance with objectives as disclosed in offer document. A fund established in the form of a trust to raise monies through the sale of units to the public or a section of the public under one or more schemes for investing in securities, including money market instruments.</td>
</tr>
<tr>
<td>Net Interest Margin</td>
<td>Net interest margin is the net interest income divided by average interest earning assets.</td>
</tr>
<tr>
<td>Net NPA</td>
<td>Net NPA = Gross NPA – (Balance in Interest Suspense account +DICGC/ECGC claims received and held pending adjustment + Part payment received and kept in suspense account + Total provisions held)’</td>
</tr>
<tr>
<td>Nostro accounts</td>
<td>Foreign currency settlement accounts that an AIFI maintains with its overseas correspondant banks. These accounts are assets of the domestic AIFI.</td>
</tr>
<tr>
<td>Off-Balance Sheet exposures</td>
<td>Off-Balance Sheet exposures refer to the business activities of an AIFI that generally do not involve booking assets (loans) and taking deposits. Off-balance sheet activities normally generate fees, but produce liabilities or assets that are deferred or contingent and thus, do not appear on the institution's balance sheet until or unless they become actual assets or liabilities.</td>
</tr>
<tr>
<td>Open position</td>
<td>It is the net difference between the amounts payable and amounts receivable in a particular instrument or commodity. It results from the existence of a net long or net short position in the particular instrument or commodity.</td>
</tr>
<tr>
<td>Option</td>
<td>An option is a contract which grants the buyer the right, but not the obligation, to buy (call option) or sell (put option) an asset, commodity, currency or...</td>
</tr>
</tbody>
</table>
financial instrument at an agreed rate (exercise price) on or before an agreed date (expiry or settlement date). The buyer pays the seller an amount called the premium in exchange for this right. This premium is the price of the option.

**Rho**

Rho of an option / a portfolio of options is the rate of change in the value of an option / portfolio with respect to change in the level of interest rates.

**Risk**

The possibility of an outcome not occurring as expected. It can be measured and is not the same as uncertainty, which is not measurable. In financial terms, risk refers to the possibility of financial loss. It can be classified as credit risk, market risk and operational risk.

**Risk Asset Ratio**

An AIFI's risk asset ratio is the ratio of an AIFI's risk assets to its capital funds. Risk assets include assets other than highly rated government and government agency obligations and cash, for example, corporate bonds and loans. The capital funds include capital and undistributed reserves. The lower the risk asset ratio the better the AIFI's 'capital cushion'.

**Risk Weights**

Basel II sets out a risk-weighting schedule for measuring the credit risk of obligors. The risk weights are linked to ratings given to sovereigns, financial institutions and corporations by external credit rating agencies.

**Securitisation**

The process whereby similar debt instruments/assets are pooled together and repackaged into marketable securities which can be sold to investors. The process of loan securitisation is used by AIFIs to move their assets off the balance sheet in order to improve their capital asset ratios.

**Short position**

A short position refers to a position where gains arise from a decline in the value of the underlying. It also refers to the sale of a security in which the seller does not have a long position.

**Specific risk**

Within the framework of the BIS proposals on market risk, specific risk refers to the risk associated with a specific security, issuer or company, as opposed to the risk associated with a market or market sector (general risk).

**Subordinated debt**

Refers to the status of the debt. In the event of the bankruptcy or liquidation of the debtor, subordinated debt only has a secondary claim on repayments, after other debt has been repaid.

**Theta**

The theta of an option / a portfolio of options is the rate of change in the value of the option / portfolio with respect to passage of time, with all else remaining the same. It is also called the “time decay” of the option.

**Trading Book**

A trading book or portfolio refers to the book of financial instruments held for the purpose of short-term trading, as opposed to securities that would be held as a long-term investment. The trading book refers to the assets that are held primarily for generating profit on short-term differences in prices/yields. The price risk is the prime concern of AIFIs in trading book.

**Underwrite**

Generally, to underwrite means to assume a risk for a fee. Its two most common contexts are:

a) Securities: a dealer or investment bank agrees to purchase a new issue of securities from the issuer and distribute these securities to investors. The underwriter may be one person or part of an underwriting syndicate. Thus the issuer faces no risk of being left with unsold securities.

b) Insurance: a person or company agrees to provide financial compensation against the risk of fire, theft, death, disability, etc., for a fee called a premium.

**Value at risk (VAR)**

It is a method for calculating and controlling exposure to market risk. VAR is a single number (currency amount) which estimates the maximum expected loss of a portfolio over a given time horizon (the holding period) and at a given confidence level.

**Vega**

The Vega of an option / a portfolio of options is the rate of change in the value of the option / portfolio with respect to volatility of the asset(s) underlying the

Chapter III – Exposure Norms

18. Introduction

Exposure limits is one of the fundamental tools to manage credit concentration risk. The instructions contained in the following paragraphs cover Bank’s norms on credit exposures as well as capital market exposures of the AIFIs.

19. Scope and Applicability

19.1 The refinance portfolios are not subject to these exposure norms. However, from the prudential perspective, the AIFIs are well advised to evolve their own credit exposure limits, with the approval of their Board, even in respect of their refinancing portfolio. Such limits could, inter alia, be related to the capital funds / regulatory capital of the institution. Any relaxation / deviation from such limits, if permitted, should be only with the prior approval of the Board.

19.2 While computing the extent of exposures to a borrower / borrower group for assessing compliance vis-a-vis the single borrower limit / group borrower limit, exposures where principal and interest are fully guaranteed by the Government of India may be excluded.

19.3 These norms deal with only the individual borrower and group borrower exposures but not with the sector / industry exposures. The AIFIs may, therefore, consider fixing internal limits for aggregate commitments to specific sectors e.g., textiles, chemicals, engineering, etc., so that the exposures are evenly spread. These limits should be fixed having regard to the performance of different sectors and the perceived risks. The limits so fixed should be reviewed periodically and revised, if necessary.

19.4 These stipulations shall apply to all borrowers. However, in so far as public sector undertakings are concerned, only single borrower exposure limit would be applicable.

19.5 The norms have evolved over the years and various aspects of the credit exposure norms applicable to AIFIs are detailed in the following paragraphs.

20. Definitions

20.1 'Capital Funds'

The total regulatory capital of the AIFI, determined as per the capital adequacy norms of RBI applicable to the AIFIs, as on March 31 (June 30 in case of NHB) of the previous year, would constitute the 'capital funds' for the purpose of these exposure norms.

20.2 'Infrastructure Projects' / 'Infrastructure Lending'

Any credit facility in whatever form extended by the AIFIs to an infrastructure facility as specified below falls within the definition of "infrastructure lending". In other words, it is a credit facility provided to a borrower company engaged in:

- developing or
- operating and maintaining, or
- developing, operating and maintaining

any infrastructure facility that is a project in any of the sectors incorporated in the latest updated Harmonized Master List of Infrastructure Sub-sectors published by the Government of India.
20.3 'Group' Borrowers
The concept of "Group" and the task of identification of the borrowers belonging to specific industrial groups is to be based on the perception of the AIFIs. AIFIs are, it is observed, generally aware of the basic constitution of their clientele for the purpose of regulating their exposure to risk assets. The group to which a particular borrowing unit belongs should, therefore, be decided by them on the basis of the relevant information available with them, the guiding principle in this regard being commonality of management and effective control.

20.4 Net Owned Funds in respect of NBFCs
Net owned Funds will consist of paid up equity capital, free reserves, balance in share premium account and capital reserves representing surplus arising out of sale proceeds of assets but not reserves created by revaluation of assets. From the aggregate of items will be deducted accumulated loss balance and book value of intangible assets, if any, to arrive at owned funds. Investments in shares of other NBFCs and in shares, debentures of subsidiaries and group companies in excess of ten percent of the owned fund mentioned above will be deducted to arrive at the Net Owned Funds. The NOF should be computed on the basis of last audited Balance Sheet and any capital raised after the Balance Sheet date should not be accounted for while computing NOF.

21. Exposure Ceilings
21.1 For Single / Individual Borrowers
The credit exposure to single borrowers shall not exceed 15 per cent of capital funds of the AIFI. However, the exposure may exceed by additional five percentage points (i.e., up to 20 per cent) provided the additional credit exposure is on account of infrastructure projects. AIFIs may, in exceptional circumstances, with the approval of their Boards, consider enhancement of the exposure to a borrower up to a further 5 per cent of capital funds (i.e., 25 per cent of capital funds for infrastructure projects and 20 percent for other projects).

With effect from May 29, 2008, the single borrower exposure limit has been raised to twenty five percent of the capital funds, only in respect of Oil Companies who have been issued Oil Bonds (which do not have SLR status) by Government of India. In addition to this, AIFIs may in exceptional circumstances, as hitherto, in terms of this paragraph, consider enhancement of the exposure to the Oil Companies up to a further 5 percent of capital funds.

21.2 For Group Borrowers
The credit exposure to the borrowers belonging to a group shall not exceed 40 per cent of capital funds of the AIFI. However, the exposure may exceed by additional ten percentage points (i.e., up to 50 per cent) provided the additional credit exposure is on account of infrastructure projects. AIFIs may, in exceptional circumstances, with the approval of their Boards, consider enhancement of the exposure to a borrower up to a further 5 per cent of capital funds (i.e. 55 percent of capital funds for infrastructure projects and 45 percent for other projects).

21.3 For Bridge Loans / Interim Finance
21.3.1 AIFIs may grant bridge loan / interim finance to companies other than NBFCs against public issue of equity whether in India or abroad, for which appropriate guidelines should be laid down by the Board of the AIFI, as prescribed by RBI. However, AIFIs should not grant any advance against Rights issue irrespective of the source of repayment of such advance.

21.3.2 AIFIs may sanction bridge loans to companies for commencing work on projects pending completion of formalities only against their own commitment and not against loan commitment of any other financial institutions / Banks. However, AIFIs may consider sanction
of bridge loan / interim finance against commitment made by a financial institution and / or another bank only in cases where the lending institution faces temporary liquidity constraint, subject to certain conditions prescribed by RBI.

21.3.3 These restrictions are also applicable to the subsidiaries of AIFIs for which AIFIs are required to issue suitable instructions to their subsidiaries.

21.4 Working Capital Finance

There is no objection to AIFIs extending working capital finance on a very selective basis to borrowers enjoying credit limits with banks, whether under a consortium or under a multiple banking arrangement, when the banks are not in a position to meet the credit requirements of the borrowers concerned on account of temporary liquidity constraints. The AIFIs should take into account these guidelines while granting short term loans to borrowers enjoying credit limits with banks on a consortium basis. In case of borrowers whose working capital is financed under a multiple banking arrangement, the AIFI should obtain an auditor's certificate indicating the extent of funds already borrowed, before considering the borrower for further working capital finance.

21.5 Revolving Underwriting Facility

AIFIs should not extend Revolving Underwriting Facility to Short Term Floating Rate Notes / Bonds or Debentures issued by corporate entities.

21.6 Exposures to NBFCs

(i) **NBFCs predominantly Engaged in lending against Gold Jewellery:** The exposure (both lending and investment, including off balance sheet exposures) of an AIFI to a single NBFC which is predominantly engaged in lending against collateral of gold jewellery (i.e. such loans comprising 50 per cent or more of their financial assets), shall not exceed 7.5 per cent of AIFIs’ capital funds. However, this exposure ceiling may go up by 5 per cent, i.e. up to 12.5 per cent of AIFIs’ capital funds if the additional exposure is on account of funds on-lent by such NBFCs to the infrastructure sector.

(ii) **Residuary Non-Banking Companies (RNBCs):** In respect of RNBCs, which are also required to be mandatorily registered with Reserve Bank of India, AIFI exposure shall be restricted to the extent of their Net Owned Fund (NOF).

(iii) **Infrastructure Finance Companies (IFCs):** Exposure of an AIFI to IFCs shall not exceed 15% of its capital funds as per its last audited balance sheet, with a provision to increase it to 20% if the same is on account of funds on-lent by the IFCs to the infrastructure sector.

(iv) **Other NBFCs:** The exposure (both lending and investment, including off balance sheet exposures) of an AIFI to a single NBFC shall not exceed 10% of the AIFI’s capital funds as per its last audited balance sheet. In case of NBFCs financing physical assets supporting productive/economic activity such as automobiles, tractors, lathe machines, generator sets, earth moving and material handling equipment, industrial machines, etc., the financing AIFI’s exposure limit may be exceeded up to a maximum of another 5% of AIFI’s capital funds, on a pro-rata basis, to the extent of funds on-lent by NBFCs to physical assets supporting productive/economic activity.

(v) **Other Provisions regarding AIFIs’ exposure to NBFCs**

(a) AIFIs may assume exposures on a single NBFC up to another 5% of their capital funds over and above ceilings prescribed at sub-paras (i) to (iv) above, provided the excess exposure is on account of funds on-lent by the NBFC to the infrastructure sector.

(b) AIFIs should also fix internal limits for their aggregate exposure to all NBFCs put together. AIFIs should also have an internal sub-limit on their aggregate exposures to all
NBFCs, having gold loans to the extent of 50 per cent or more of their total financial assets, taken together. This sub-limit should be within the internal limit fixed by the AIFIs for their aggregate exposure to all NBFCs put together.

The AIFIs shall not hold more than 10% of the paid up equity capital of an NBFC – D (Deposit Taking). This restriction would, however, not apply to investment in housing finance companies.

21.7 Investment in Debt Securities

The total investment in the unlisted debt securities should not exceed 10 per cent of the AIFIs’ total investment in debt securities as on March 31 (June 30 in case of NHB), of the previous year. However, the investment in the following instruments will not be reckoned as 'unlisted debt securities' for monitoring compliance with the above prudential limits:

(i) Security Receipts (SRs) issued by Securitisation Companies / Reconstruction Companies registered with RBI in terms of the provisions of the Securitisation and Reconstruction of Financial Assets and Enforcement of Securities Interest (SARFAESI) Act, 2002; and

(ii) Asset Backed Securities (ABS) and Mortgage Backed Securities (MBS) which are rated at or above the minimum investment grade.

21.8 Exposure to capital markets

21.8.1 Computation of exposure

For computing the exposure to the capital markets, loans/advances sanctioned would be reckoned with reference to sanctioned limits or outstanding, whichever is higher. However, in the case of fully drawn term loans, where there is no scope for re-drawal of any portion of the sanctioned limit, AIFIs’ may reckon the outstanding as the exposure. Further, AIFIs’ direct investment in shares, convertible bonds, convertible debentures and units of equity-oriented mutual funds would be calculated at their cost price.

21.8.2 Limit on aggregate exposure to capital markets and investments in non-financial /commercial enterprises

A. Limit on aggregate exposure to capital markets

The aggregate exposure of an AIFI to the capital markets in all forms (both fund based and non-fund based, direct and indirect), on solo as well as consolidated basis shall not exceed 40 per cent of its net worth, as on March 31 of the previous year, provided that the AIFI’s direct exposure within this overall ceiling shall not exceed 20 per cent of its net worth.

B. Limits on equity investment in a single non-financial/commercial enterprise

(i) Limits on significant equity investments in non-financial/commercial enterprises

An AIFI's equity investment in a single company that is made in conformity with its statutory mandate shall not exceed 49% of the equity of the investee company.

(ii) Limits on other equity investments in non-financial/commercial enterprises

a. An AIFI should not hold more than 10% of the equity of the investee company as direct investment.

b. An AIFI can hold up to 49% of equity of a company as a pledgee. However, if the AIFI ends up acquiring this in satisfaction of its claims, it shall be brought down below 10% limit within 3 years.
C. Limits on aggregate exposure to capital markets

An AIFI's aggregate investment in equity of non-financial/commercial enterprises, other than that covered under para 21.8.2 (B) (i) above, shall not exceed 10 per cent of the AIFI's net worth as on March 31 of the previous year.

Provided that Board of the AIFI shall have the freedom to adopt a lower ceiling for the AIFI, keeping in view its overall risk profile and corporate strategy.

Provided further that acquisition of equity shares consequent to a debt restructuring package shall be exempted from the prudential limits as per the guidelines contained in the “Prudential Framework for Resolution of Stressed Assets” applicable to AIFIs as amended from time to time.

Provided further that AIFIs exceeding the regulatory ceiling of the capital market exposure due to financing acquisition of PSU shares under the Government of India disinvestment programmes shall approach RBI with a request for relaxation in the ceiling.

21.9 Cross Holding of Capital among Banks / Financial Institutions

(i) AIFIs’ investment in the following instruments, which are issued by other banks / AIFIs and are eligible for capital status for the investee bank / AIFIs, should not exceed 10 percent of the investing AIFI's capital funds (Tier I plus Tier II):

a. Equity shares;

b. Preference shares eligible for capital status;

c. Subordinated debt instruments;

d. Hybrid debt capital instruments; and

e. Any other instrument approved as in the nature of capital.

AIFIs should not acquire any fresh stake in a bank's / AIFI's equity shares, if by such acquisition, the investing AIFI's holding exceeds 5 percent of the investee bank's / AIFI's equity capital.

21.10 Level of Exposure

21.10.1 The sanctioned limit or outstanding, whichever is higher, shall be reckoned in respect of the funded as well as non-funded facilities, for arriving at the level of exposure. The "credit exposure" shall include funded and non-funded credit limits, underwriting and other similar commitments. The exposure on account of derivative products should also be reckoned for the purpose.

21.10.2 In case of term loans, however the level of exposure should be reckoned on the basis of actual outstandings plus undisbursed or undrawn commitments. However, in cases where disbursements are yet to commence, the level of exposure should be reckoned on the basis of the sanctioned limit or the extent up to which the AIFI has entered into commitments with the borrowing companies in terms of the agreement.

(In tune with the international practice, the funded as well as non-funded exposures are required to be reckoned at 100 per cent value.)

21.10.3 For the purpose of determining the level of exposure, the following instruments should also be reckoned:

(i) Bonds and Debentures in the Nature of Advance: The bonds and debentures should be treated in the nature of advance when:

- The debenture / bond is issued as part of the proposal for project finance and the tenor of the bond / debenture is for three years and above
and
- The AIFI has a significant stake (i.e., 10% or more) in the issue

and
- The issue is a part of private placement i.e., the borrower has approached the AIFI, and not part of a public issue where the AIFI has subscribed in response to an invitation.

(ii) **Preference Shares in the Nature of Advance**: The preference shares, other than convertible preference shares, acquired as part of project financing and meeting the criteria as at (i) above.

(iii) **Deposits**: The deposits placed by the AIFIs with the corporate sector.

21.10.4 For computing the level of exposure in respect of the NBFCs, the AIFI's investment in the privately placed debentures should be included while those acquired in the secondary market should be excluded.

21.10.5 **Prudential Norms for Off-balance Sheet Exposures of AIFIs**

21.10.5.1 AIFIs are advised to comply with the prudential requirements relating to Off-balance Sheet Exposures of AIFIs set out at Annex 19.

21.10.5.2 The operational guidance on Novation is enclosed at Annex 20.

21.10.6 **Measurement of Exposure in Derivative Products**

21.10.6.1 **Methodology for Calculation of Replacement Cost**

**The Current Exposure Method**

Under this method, the credit risk exposure / credit equivalent amount of the derivative products is computed periodically on the basis of the market value of the product to arrive at its current replacement cost. Thus, the credit equivalent of the off-balance sheet interest rate and exchange rate instruments would be the sum of the following two components:

(a) the total 'replacement cost' - obtained by "marking-to-market" of all the contracts with positive value (i.e. when the AIFI has to receive money from the counterparty); and

(b) an amount for 'potential future exposure' - calculated by multiplying the total notional principal amount of the contract by the credit conversion factors according to the Basel III Capital Regulations applicable to AIFIs

Under the current exposure method, the AIFIs should mark to market the derivative products at least on a daily basis and they may follow their internal methods for determining the marked-to-market value of the derivative products. However, the AIFIs would not be required to calculate potential credit exposure for single currency floating / floating interest rate swaps. The credit exposure on these contracts would be evaluated solely on the basis of their mark-to-market value.

21.11 **Exposure in respect of bonds guaranteed by Public Financial Institutions (PFIs)**

21.11.1 The investments made by the AIFIs in the bonds and debentures of corporates which are guaranteed by a PFI as defined under Section 2 (72) of Companies Act, 2013, will be treated as an exposure of the AIFI on the PFI and not on the corporate. Guarantees issued by a PFI to the bonds of the corporates will be treated as an exposure of the AIFI to the corporate whereas the exposure of the AIFI on the PFI guaranteeing the corporate bond will be to the extent of 100 per cent of the AIFI's investment. Although the exposure of the AIFI is non-funded, such exposure will also be required to be reckoned at 100 per cent of the value of such guarantees.
21.11.2 The AIFIs are also required to take into account the overall exposure of the guaranteed unit to the financial system before guaranteeing the bonds / debentures.

21.12 Treatment of Loans granted by the AIFIs against the Guarantee of Banks / AIFIs

21.12.1 The banks / AIFIs have been permitted to extend guarantees in respect of infrastructure projects in favour of other lending institutions provided the bank/ AIFI issuing the guarantee takes a funded share in the infrastructure project at least to the extent of five per cent of the project cost and undertakes normal credit appraisal, monitoring and follow up of the project. For the purpose of exposure norms, the entire loan transaction should be reckoned as an exposure on the borrowing entity and not on the bank/ AIFI guaranteeing the loan, so as to correctly reflect the degree of credit concentration. In case the funded facility is by way of a term loan, the level of exposure should be reckoned, as indicated below:

- Before commencement of disbursement, the exposure would be the sanctioned limit or the extent up to which the AIFI has entered into commitment with the borrowing entity in terms of the agreement, as the case may be;
- After commencement of disbursement, the exposure would be the aggregate of the outstanding amount plus the undisbursed or undrawn commitment.

21.13 Reporting System

An annual review of the implementation of exposure management measures should be placed before the Board before the end of June (September in case of NHB) every year. A copy of the review should be furnished for information to the Chief General Manager-in-Charge, Department of Supervision, Reserve Bank of India, Central Office, World Trade Centre, Cuffe Parade, Colaba, Mumbai - 400 005.

21.14 Consolidated Financial System

As a prudential measure aimed at better risk management and avoidance of concentration of credit risks, in addition to prudential limits on exposure of the solo entities, the AIFIs at the group-wide level should also adhere to the following prudential limits, on an ongoing basis:

<table>
<thead>
<tr>
<th>Single borrower exposures at the group level</th>
<th>15% of capital funds of the Group.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Up to 20% of capital funds of the Group provided the additional exposure of up to five percentage points is for the purpose of financing infrastructure projects.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Group borrower exposures at the group level</th>
<th>40% of capital funds of the Group.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Up to 50% of capital funds of the Group provided the additional exposure of up to 10 percentage points is for the purpose of financing infrastructure projects.</td>
</tr>
</tbody>
</table>

The 'capital funds' of the Group for the purpose of exposure norms would be the same as reckoned for the purpose of group-wide capital adequacy. The measurement of credit exposure at the group level should be done in the same manner as prescribed for the AIFIs on a solo basis.

21.15 Disclosures

The AIFI should make appropriate disclosures in the 'Notes on account' to the annual financial statements in respect of the exposures where the AIFI had exceeded the prudential exposure limits during the year.
21.16 Exemptions

21.16.1 Clearing Exposures to Q-CCPs

21.16.1.1 AIFIs’ clearing exposure to a Qualifying CCP (Q CCP) shall be kept outside of the exposure ceiling of 15 per cent of its capital funds applicable to a single counterparty. Clearing exposure shall include trade exposure and default fund exposure. Other exposures to QCCPs such as loans, credit lines, investments in the capital of CCP, liquidity facilities, etc. shall continue to be within the existing exposure ceiling of 15 per cent of a AIFI's capital funds to a single counterparty. However, all exposures of an AIFI to a non-QCCP shall be within the exposure ceiling of 15 per cent. The Reserve Bank will monitor AIFIs’ clearing exposures to QCCPs. In cases where an AIFI’s exposures to QCCPs are considered high, the Reserve Bank may initiate suitable measures requiring the AIFI to initiate suitable risk mitigation plans such as either reducing the exposure within reasonable time or maintaining a higher level of capital on such exposure.

21.16.1.2 If the regulator/ supervisor of a CCP withdraws its QCCP status, the concerned CCP will be considered a non-QCCP and exposure norms as applicable to non-QCCPs would be applicable.

21.16.2 Rehabilitation of Sick/Weak Industrial Units

The ceilings on single/group exposure limits are not applicable to existing/additional credit facilities (including funding of interest and irregularities) granted to weak/sick industrial units under rehabilitation packages.

21.16.3 Guarantee by the Government of India

The ceilings on single /group exposure limit shall not be applicable where principal and interest are fully guaranteed by the Government of India.

21.16.4 Exposure to banks and other AIFIs

The ceiling on single/group borrower exposure limit will not be applicable to exposure assumed by AIFIs on banks and other AIFIs. The individual AIFIs shall have in place a Board-approved policy to determine the size of the exposure to banks and other AIFIs. However, there is no exemption from the prohibitions relating to investments in unrated non-Government debt securities prescribed in terms of the guidelines on Prudential Norms for Classification, Valuation and Operations of Investment Portfolio by AIFIs, as amended from time to time.

21.16.5 Disinvestment Programme of the Government of India

On account of AIFIs’ financing of acquisition of PSU shares under the Government of India disinvestment programmes, if an AIFI, is likely to exceed the regulatory ceiling of single / group borrower limit, RBI may consider giving relaxation (on receipt of specific requests from the AIFI on a case by case basis), provided that the AIFI’s total exposure to the borrower, net of its exposure due to acquisition of PSU shares under the Government of India disinvestment programme, is within the prudential single/group borrower exposure ceiling prescribed by RBI.

21.16.6 Other Items excluded from Capital Market Exposure

The following items would be excluded from the aggregate exposure ceiling of 40 per cent of net worth and direct investment exposure ceiling of 10 per cent of net worth (wherever applicable):

i. AIFIs’ investments in own subsidiaries, joint ventures, State Finance Corporations (SFCs) and investments in shares and convertible debentures, convertible bonds issued by
institutions forming crucial financial infrastructure such as SME Rating Agency of India Ltd. (ACUITE), India SME Technology Services Ltd (ISTSL), India SME Asset Reconstruction Company Ltd (ISARC), North Eastern Development Finance Corporation Ltd (NeDFi), NSE Clearing Ltd., Central Depository Services (India) Ltd. (CDSL), National Securities Clearing Corporation Ltd. (NSCCL), National Stock Exchange (NSE), Clearing Corporation of India Ltd., (CCIL), a credit information company which has obtained Certificate of Registration from RBI and of which the AIFI is a member, Multi Commodity Exchange Ltd. (MCX), National Commodity and Derivatives Exchange Ltd. (NCDEX), National Multi-Commodity Exchange of India Ltd. (NMCEIL), National Collateral Management Services Ltd. (NCMSL), National Payments Corporation of India (NPCI) and other Public Finance Institutions (PFIs) as defined under Section 2 (72) of Companies Act, 2013. After listing, the exposures in excess of the original investment (i.e. prior to listing) would form part of the Capital Market Exposure.

ii. Tier I and Tier II debt instruments issued by other banks/ AIFIs;
iii. Investment in Certificate of Deposits (CDs) of other banks/ AIFIs;
iv. Preference Shares;
v. Non-convertible debentures and non-convertible bonds;
vi. Units of Mutual Funds under schemes where the corpus is invested exclusively in debt instruments;
vii. Shares acquired by AIFIs as a result of conversion of debt/overdue interest into equity under the Prudential Framework for Resolution of Stressed Assets dated June 7, 2019 applicable to AIFIs as amended from time to time;
viii. Promoters’ shares in the SPV of an infrastructure project pledged to the lending AIFI for infrastructure project lending.
ix. AIFIs exposure to brokers under the currency derivatives segment.

21.17 Reporting

AIFIs shall report their clearing exposures to each QCCP to Reserve Bank through email and to the Chief General Manager-in-charge, Department of Supervision, Central Office, Reserve Bank of India, Mumbai within seven days of each succeeding month. The data on clearing exposure should be the end of day clearing exposures to each QCCP separately for all the days in a month. The reporting format in this respect is given in the Annex 21. In cases where an AIFI's exposures to QCCPs are considered high, the Reserve Bank may initiate suitable measures requiring the AIFI to initiate suitable risk mitigation plans such as either reducing the exposure within reasonable time or maintaining a higher level of capital on such exposure.
Prudential Norms for Off-balance Sheet Exposures of AIFIs

Please refer to our circular DBOD.No.BP.BC.31/21.04.157/2012-13 dated July 23, 2012, in terms of which, any change in any of the parameters of a derivative contract is treated as restructuring and the mark-to-market (MTM) value of the contract on the date of restructuring should be cash settled.

2. There may be situations where the clients of AIFIs may like to reduce the notional exposure of the hedging derivative contract. In such cases, AIFIs may partially or fully terminate the contract before maturity, at their discretion, thereby reducing the notional exposure of the contract. This reduction in notional exposure would not be treated as restructuring of the derivative contract provided all other parameters of the original contract remain unchanged.

3. In such cases, if the MTM value of the derivative contract is not cash settled, AIFIs may permit payment in instalments of the crystallized MTM of such derivative contracts (including Forex Forward Contracts), subject to the following conditions:

   (i) AIFIs should have a Board approved policy in this regard.

   (ii) AIFIs should permit repayment in instalments only if there is a reasonable certainty of repayment by the client.

   (iii) The repayment period should not extend beyond the maturity date of the contract.

   (iv) The repayment instalments for the crystallized MTM should be uniformly received over the remaining maturity of the contract and its periodicity should be at least once in a quarter.

   (v) If the client is permitted to pay the crystallized MTM in instalments and

      a. if the amount becomes overdue for 90 days from the date of partial / full termination of the derivative contract, the receivable should be classified as NPA.

      b. if the amount becomes overdue for 90 days from the due date of payment of subsequent instalments, the receivable should be classified as NPA.

   (vi) AIFIs should reverse the entire MTM which has been taken to Profit and Loss account on accrual basis in case of (v) (a) and (v) (b) above. For the accounting of reversed MTM in these cases, AIFIs should follow an approach similar to the one stipulated in circulars DBOD.No.BP.BC.57/21.04.157/2008-09 dated October 13, 2008 and DBOD.No.BP.BC.28/21.04.157/2011-12 dated August 11, 2011 on 'Prudential Norms for Off-balance Sheet Exposures of Banks'. Accordingly, the crystallized MTM of these derivative contracts should be reversed from Profit and Loss account and credited to another suspense account styled as 'Suspense Account - Crystallised Receivables'.

4. If the client is not granted the facility of paying the crystallised MTM value in instalments and the amount becomes overdue for 90 days from the date of partial / full termination of the derivative contract, the entire receivable should be classified as NPA and AIFIs should follow the instructions stipulated in our circulars dated October 13, 2008 and August 11, 2011, referred to above.

5. There may be cases, where the derivative contract has been terminated, either partially or fully, and crystallized MTM has been permitted to be repaid in instalments but the client subsequently decides to hedge the same underlying exposure again by entering into new contract with same or other bank (provided such re-booking is permissible as per extant RBI guidelines). In such cases, AIFIs may offer derivative contracts to the client provided the client has fully repaid the entire outstanding instalments corresponding to the derivative contract that was used to hedge the underlying exposure previously.
Novation of OTC Derivative Contracts

1. Novation

A novation is the replacement of a contract between two counterparties (Transferor\textsuperscript{217}, who steps out of the existing deal, and Remaining Party\textsuperscript{218}) to an OTC derivatives transaction with a new contract between Remaining Party and a third party (Transferee\textsuperscript{219}). Transferee becomes the new counterparty to Remaining Party. The novation can only be done with the prior consent\textsuperscript{220} of Remaining Party.

2. Purpose of Novation

Novation may be used for management of counter-party exposure and counter-party credit risk, to deal with events such as winding-up of business / lines of business by banks and mergers / acquisitions.

3. Mechanism for Novation

3.1 Under novation, a tripartite agreement is signed between the three parties - Transferor, Remaining Party and Transferee, wherein Transferee steps into the contract to face Remaining Party and Transferor steps out. The original contract stands extinguished and is replaced by a new contract with identical terms / parameters such as notional amount, maturity date, etc. to the original contract except for the change in counterparty for the Remaining Party.

3.2 Transferor and Remaining Party are each released from their obligations under the original transaction to each other and their respective rights against each other are cancelled. These rights and obligations identical in their terms to original transaction are reinstated in the new transaction between Remaining Party and Transferee.

3.3 The novation should result in transfer of counterparty credit risk and market risk arising from the derivative contract from Transferor to Transferee.

3.4 Under the novation transaction, the amount corresponding to Mark-to-Market value of the derivative contract at the prevailing market rate on novation date should be exchanged between Transferor and Transferee who are actually economically impacted by the transaction. This exchange\textsuperscript{221} of MTM should be done upfront. There should be no cash-flows for Remaining Party on account of novation transaction.

---

\textsuperscript{217} a party to a transaction that proposes to transfer, or has transferred, by novation to a transferee all its rights, liabilities, duties and obligations with respect to a remaining party and discharges such remaining party.

\textsuperscript{218} a party to a transaction whose consent is required in connection with, or who has consented to, a transferor's transfer by novation and the acceptance thereof by the transferee of all of the transferor's rights, liabilities, duties and obligations with respect to such remaining party.

\textsuperscript{219} a party to a transaction that proposes to accept, or has accepted, a transferor's transfer by novation all of the rights, liabilities, duties and obligations of a transferor with respect to a remaining party.

\textsuperscript{220} The remaining party would have full discretion and may reject the proposed novation. Such rejection can be on account of credit, operational, accounting or other reasons.

\textsuperscript{221} The exact consideration paid may differ from the Mark-to-Market value on account of any balance sheet usage charges that transferee may wish to impose in order to have the derivative transaction on its books for the residual maturity.
3.5 Transferor and Transferee may agree on the charge / fee between them for the transfer of the trade. The fees and their settlement terms may not form part of the novation agreement since these arrangements do not affect the Remaining Party.

3.6 Any document, which could be related to original contract and underlying exposure, should be transferred from Transferor to Transferee as part of the novation agreement.

4. Documentation
The three parties involved may use the standard novation agreement for this purpose.

5. Other Conditions
5.1 Transferor AIFI can novate a derivative contract only after the contract has been held by Transferor in its books for a minimum period of
   * six months for contracts with original maturity of up to one year, and
   * nine months for contracts with original maturity of more than one year.
However, this condition would not apply in cases where Transferor bank / AIFI is winding-up the business or put under liquidation.

5.2 Transferee AIFI can undertake novation only if Remaining Party is its constituent borrower.

5.3 Transferee AIFI should carry out necessary due diligence independently as required under RBI circular DBOD.No.BP.BC.44/21.04.157/2011-12 dated November 2, 2011 on 'Comprehensive Guidelines on Derivatives : Modifications' and FMRD Master Direction No. 1/2016-17 dated July 5, 2016 on Risk Management and Inter-Bank Dealings as updated from time to time.

222 The clearing exposure in respect of each QCCPs need to be reported in separate tables.

223 The exposures need to be reported in respect of each working day of the month.

224 Trade exposure and default fund exposure as defined in the guidelines on capital requirements for banks’ exposure to central counterparties issued vide Circular DBOD.No.BC.28/21.06.201/2013-14 dated July 2, 2013.

225 All exposures other than trade exposure and default fund exposure should be reported in this column.
Chapter IV- Significant Investments of AIFIs

The following instructions shall be read with the extant prudential norms on Exposures for the AIFIs.

22. Definitions

Financial Services Company: means a company engaged in the 'business of financial services as defined in the Reserve Bank of India (Financial Services provided by Banks) Directions, 2016 dated May 26, 2016 as amended from time to time.

Non-Financial Services Company: means a company not engaged in any of the activities being conducted by a Financial Services Company.

Significant Influence: means significant influence as defined in terms of the Accounting Standards of the Institute of Chartered Accountants of India.

Subsidiary: means a subsidiary as defined in terms of the Accounting Standards of the Institute of Chartered Accountants of India.

23. Prudential limits for investments by AIFIs

AIFIs shall formulate policies, with the approval of their Board, covering the following aspects of investments in financial entities to the extent these are not covered under the cross holding limits prescribed under the Exposure Norms applicable to AIFIs.

(i) Limits in terms of percentage of the paid up capital and reserves of the AIFI as per the last audited balance sheet or a subsequent balance sheet, whichever is lower

a. Investment in equity of a single financial services entity which is not an affiliate of the AIFI
b. Aggregate investment in equity of all financial services entities which are not affiliates of the AIFI
c. Aggregate investment in equity of all financial services entities including the affiliates of the AIFI
d. The aggregate of equity investment in factoring subsidiaries and factoring companies
e. Investment in equity of a single deposit taking NBFC
f. Equity/ Units of a venture capital fund (VCF)

(ii) Requirement for approval of Reserve Bank of India

No AIFI shall, without the prior approval of RBI, make:

(a) Investment in a subsidiary and a financial services company that is not a subsidiary.

Provided that such prior approval shall not be necessary in the following circumstances:

a. The investment is in a company engaged in financial services; and
b. The AIFI has minimum prescribed capital (including Capital Conservation Buffer) and has also made a net profit in the immediate preceding financial year; and
c. The shareholding of the AIFI including the proposed investment is less than 10 per cent of the investee company’s paid up capital226; and

226 SIDBI’s investment limit in MSME dedicated VCFs without the prior approval of the Bank shall be 20%.
d. The aggregate shareholding of the AIFI along with shareholdings, if any, by its subsidiaries or joint ventures or other entities directly or indirectly controlled is less than 20 per cent of the investee company’s paid up capital.

Explanation: Prior approval of RBI shall not be required if the investments in the financial services companies are held under the “Held for Trading” category and are not held beyond 90 days.

(b) Investment in a non-financial services company in excess of 10 percent of such investee company’s paid up share capital.

(c) Investment of more than 10 per cent of the paid up capital/ unit capital in a Category I/Category II Alternative Investment Fund (AIF)

No AIFI shall make an investment in a Category III AIF. Investment by an AIFI’s subsidiary in a Category III AIF shall be restricted to the regulatory minima prescribed by SEBI.

AIFIs shall ascertain the risks arising on account of equity investments in Alternative Investment Funds done directly or through their subsidiaries, within the Internal Capital Adequacy Assessment Process (ICAAP) framework and determine the additional capital required which will be subject to review as part of Supervisory Review and Evaluation Process.

24. **Procedure for seeking approval of Reserve Bank of India:**

An AIFI desirous of making an investment that requires prior approval of RBI shall make an application for its proposed investment along with the details of intended equity contribution in the subsidiary/financial/non-financial services company, Board Note and Resolution approving the AIFI’s proposal and the details of AIFI’s existing equity contribution in its subsidiaries and other financial and non-financial services companies to the Department of Regulation, Central Office, Reserve Bank of India, Mumbai.

25. **Relationship with subsidiaries**

A parent/ sponsor AIFI shall maintain an "arm’s length" relationship with the subsidiary sponsored by it and evolve the following supervisory strategies:

(a) The Board of the parent/sponsor AIFI shall review the working of subsidiaries at periodical intervals.

(b) The parent/sponsor AIFI shall undertake inspection/audit of the books of accounts of the subsidiaries at periodical intervals.

(c) The subsidiary shall not set up another subsidiary, or promote a new company which is not a subsidiary thereof, or undertake any new business without prior approval of RBI.

Explanation: ‘New Business’ shall not mean expansion into the same line of business that is already permitted/approved to be undertaken.

(d) The subsidiary shall not make any portfolio investment in another existing company with an intention of acquiring controlling interest, without prior approval of the Reserve Bank. This shall not apply to the investments made by a Category I and II AIF set up by a subsidiary.

(e) A subsidiary shall not have any on-line access to customers’ accounts maintained with the AIFI. The information between an AIFI and its subsidiary may be shared subject to maintaining arm’s length relationship.

(f) The AIFI shall not grant any unsecured advances to the subsidiary without prior approval of the Reserve Bank.
(g) Transactions between an AIFI and its subsidiary shall be at arm’s length. No preferential treatment shall be given to the subsidiary vis-à-vis a counterparty with similar risk characteristics.
Chapter V - Prudential Norms for Classification, Valuation and Operation of Investment Portfolio by AIFIs

The Reserve Bank of India issues guidelines for the investment portfolio of the AIFIs, keeping in view the developments in the financial markets and taking into consideration the evolving international practices. This Chapter consolidates the guidelines/circulars issued by the Reserve Bank of India on prudential norms for classification, valuation and operation of investment portfolio by AIFIs.

26. Investment Policy

26.1 Objectives of Investments

AIFIs have been undertaking transactions in securities on their own Investment Account, on behalf of Portfolio Management Scheme (PMS) clients in their fiduciary capacity, and on behalf of other clients, either as custodians of their investments or purely as their agents. With the approval of their respective Boards, AIFIs should clearly lay down the broad investment objectives to be followed while undertaking transactions in securities under each category mentioned above, clearly define the authority to put through deals, procedure to be followed for obtaining the sanction of the appropriate authority, procedure to be followed while putting through deals, various prudential exposure limits, and the reporting system. While laying down such investment policy guidelines, AIFIs should strictly observe the following instructions.

26.2 Transaction / Trading in Government Securities

The following instructions should be followed in conducting the trade in Government securities:

26.2.1 Transactions through SGL Account

26.2.1.1 For purchase / sale of securities through SGL A/c under the Delivery Versus Payment (DVP) System wherein the transfer of securities takes place simultaneously with the transfer of funds, it is necessary for both the selling and the buying entities to maintain current account with the RBI. As no overdraft facility in the current account would be extended, adequate balance in current account should be maintained by the AIFIs for effecting any purchase transaction. The following instructions should be followed by the AIFIs:

(i) All transactions in Govt. Securities for which SGL facility is available should be put through SGL A/cs only.

(ii) Under no circumstances, a SGL transfer form issued by an AIFI in favour of another entity should bounce for want of sufficient balance of securities in the SGL A/c of seller or for want of sufficient balance of funds in the current a/c of the buyer.

(iii) The SGL transfer form received by purchasing AIFIs should be deposited in their SGL A/cs. immediately i.e. the date of lodgement of the SGL transfer form with RBI shall be within one working day after the date of signing of the Transfer Form. While in cases of over the counter (OTC) trades, the settlement has to be only on "spot" delivery basis as per Section 2(i) of the Securities Contract (Regulation) Act, 1956, in cases of deals on the recognised Stock Exchanges, settlement should be within the delivery period as per their rules, bye laws and regulations. In all cases, participants must indicate the deal / trade / contract date in Part C of the SGL form under 'Sale date'. Where this is not completed the SGL Form will not be accepted by the Reserve Bank of India (RBI).

(a) No sale should be effected by way of return of SGL form held by the AIFI.
(b) SGL transfer forms should be signed by two authorised officials of the AIFI whose signatures should be recorded with the respective PDOs of the Reserve Bank and other banks / AIFIs.

(c) The SGL transfer forms should be in the standard format prescribed by the Reserve Bank and printed on semi-security paper of uniform size. They should be serially numbered and there should be a control system in place to account for each SGL form.

(d) If a SGL transfer form bounces for want of sufficient balance in the SGL A/c, the (selling) AIFI which has issued the form will be liable to the following penal action against it:

   a. The amount of the SGL form (cost of purchase paid by the purchaser of the security) would be debited immediately to the current account of the selling AIFI with the Reserve Bank.

   b. In the event of an overdraft arising in the current account following such a debit, penal interest would be charged by the Reserve Bank on the amount of the overdraft at a rate of three percentage points above the SBI Discount and Finance House of India's (SBIDFHII) call money lending rate on the day in question. However, if the SBIDFHII's closing call money rate is lower than the prime lending rate of the AIFI, the applicable penal rate to be charged will be three percentage points above the prime lending rate of the FI concerned.

   c. If the bouncing of the SGL form occurs thrice, the AIFI will be debarred from trading with the use of the SGL facility for a period of six months from the occurrence of the third bouncing. If, after restoration of the facility, any SGL form of the concerned AIFI bounces again, the AIFI will be permanently debarred from the use of the SGL facility in all the PDOs of the Reserve Bank.

   d. The bouncing on account of insufficient balance in the current account of the buying AIFI would be reckoned (against the buying AIFI concerned) for the purpose of debarment from the use of SGL facility on par with the bouncing on account of insufficient balance in SGL a/c. of the selling AIFI (against selling AIFI). Instances of bouncing in both the accounts (i.e., SGL a/c and current a/c) will be reckoned together against the SGL account holder concerned for the purpose of debarment (i.e., three in a half-year for temporary suspension and any bouncing after restoration of SGL facility, for permanent debarment.)

26.2.1.2 All AIFIs should necessarily hold their investments in Government securities portfolio in either SGL (with RBI) or CSGL (with a scheduled commercial bank / State Cooperative Bank / PD / AIFI and SHCIL or in a dematerialised account with depositories (NSDL / CDSL). For further reducing the scope for trading in physical form, the AIFIs are required to fully comply with following measures:

   * Only one CSGL or dematerialised account can be opened by the AIFIs.

   * In case the CSGL accounts are opened with a scheduled commercial bank or State Cooperative bank, the account holder has to open a designated funds account (for all CSGL related transactions) with the same bank.

   * In case a CSGL account is opened with any of the non-banking institutions indicated above, the particulars of the designated funds account (with a bank) should be intimated to that institution.
* The entities maintaining the CSGL / designated funds accounts will be required to ensure availability of clear funds in the designated funds accounts for purchases and of sufficient securities in the CSGL account for sales before putting through the transactions.

* No transactions by an AIFI should be undertaken in physical form with any broker.

26.2.2 Transactions on Stock Exchanges

26.2.2.1 In the trading system envisaged under the Scheme, the trades concluded on the exchanges will be cleared by their respective clearing corporations / clearing houses; hence, the AIFIs will need to settle the trade either directly with the clearing corporations / clearing houses (in case they are clearing members) or through a clearing member custodian. The AIFIs, as institutional investors, would be able to undertake the transactions only on the basis of making / receiving delivery.

26.2.2.2 With a view to facilitating participation of the AIFIs on the Stock Exchanges within the regulations prescribed by RBI, SEBI and the Exchanges, the FI have been extended the following facilities:

(i) The AIFIs may open demat accounts with a Depository Participant (DP) of National Securities Depositories Limited (NSDL) / Central Depository Services Limited (CDSL) in addition to their SGL accounts with RBI. (So far, the maintenance of demat account for the Government securities, except the SGL account, was not permissible for the AIFIs).

(ii) Value-free transfer of securities between SGL / CSGL and demat accounts would be enabled by PDO-Mumbai subject to operational guidelines being issued by our Department of Government and Bank Accounts (DGBA) separately. (Value free transfer refers to the transfer of GOI securities from the SGL / CSGL account to the demat account of the same party - which, therefore, does not require payment of any consideration).

26.2.3 Operational Guidelines

26.2.3.1 The AIFIs should ensure compliance with the following guidelines:

(a) The AIFIs should obtain specific approval from their Board to enable them to trade in the Government securities on the stock exchanges;

(b) The AIFIs should put in place enabling IT infrastructure, adequate risk management systems and appropriate internal control systems for the trading / settlement of government securities on stock exchanges. The back office arrangements should ensure that the trading on the NDS / OTC market and on the stock exchanges can be readily tracked for settlement / reconciliation purposes.

(c) The trades done through any single broker will continue to be subject to the extant guidelines on dealings through brokers.

(d) All trades should be settled either directly with clearing corporation / clearing house (in case they are clearing members) or else through clearing member custodians. Brokers / trading members shall not be involved in the settlement process.

(e) At the time of trade, securities must be available with the AIFIs either in their SGL account with the RBI or in the demat account with the depositories. Any sale on (T+3) basis on the Stock Exchanges cannot be covered by a purchase on the NDS / OTC market [even on (T+0) basis] and subsequent transfer from SGL account to their demat
account for effecting deliveries. Similarly, no sale is permitted on NDS / OTC on (T+0) basis against pay-in of securities expected on (T+0) on the Stock Exchanges.

(f) The purchase transactions by the AIFIs should similarly be subject to availability of clear funds in their settlement accounts at the time of pay-in.

(g) All payout of funds should invariably be out of clear funds, i.e. the payout must not be contingent upon the outcome of any clearing to be conducted on that day.

26.2.3.2 Any settlement failure on account of non-delivery of securities / non-availability of clear funds will be treated as SGL bouncing and the current penalties in respect of SGL bouncing will be applicable. Stock Exchanges will report such failures to the respective Public Debt Offices.

26.2.3.3 The AIFIs should regularly report to their Audit Committee of the Board, the details of transaction in Government securities, on aggregate basis, undertaken on the Stock Exchanges and particulars of any "closed-out" transactions on the exchanges.

26.2.3.4 In this context, the attention of the AIFIs is drawn to the Scheme of Non-competitive Bidding available to the retail investors in the primary auctions of Government securities, as amended by guidelines issued from time to time by RBI. A copy of the Scheme is furnished at "Government Securities Market A Primer".

26.3 Investments in Non-Government Debt Securities

26.3.1 Coverage

26.3.1.1 These guidelines apply to the AIFIs’ investments in debt instruments, both in the primary market (public issue as also private placement) as well as the secondary market, in the following categories:

(a) debt instruments issued by companies, banks, AIFIs and State and Central Government sponsored institutions, SPVs, etc.;

(b) debt instruments / bond issued by Central or State Public Sector Undertakings, with or without government guarantee;

(c) units of debt-oriented schemes of Mutual Funds i.e., the schemes where major part of corpus is invested in debt securities; and units of liquid/short term debt schemes (by whatever name called)

(d) Capital gains bonds and the bonds eligible for priority sector status;

26.3.1.2 The guidelines, however, do not apply to the following categories of investments of the AIFIs:

(a) government securities and the units of Gilt Funds;

(b) securities which are in the nature of advance under the extant prudential norms of RBI;

(c) units of the equity oriented schemes of Mutual Funds, viz., the schemes wherein a major part of their corpus is invested in equity shares;

(d) units of the "Balanced Funds", which invest in debt as well as equities, provided a major part of the corpus is invested in equity shares. In case of predominance of investments in
debt securities by the Fund, these guidelines would be attracted.

(e) Units of venture capital funds

(f) Commercial Paper; and

(g) Certificates of Deposits

26.3.2 Definitions

For the purpose of guidelines regarding investment in Non-Government debenture securities the following definitions would apply:

26.3.2.1 Rated Security: A security will be treated as rated if it is subjected to a detailed rating exercise by an external rating agency in India which is registered with SEBI and is carrying a current or valid rating. The rating relied upon will be deemed to be current or valid if:

(ii) The credit rating letter relied upon is not more than one month old on the date of opening of the issue, and

(iii) The rating rationale from the rating agency is not more than one year old on the date of opening of the issue, and

(iv) The rating letter and the rating rationale are a part of the offer document.

(v) In the case of secondary market acquisition, the credit rating of the issue should be in force and confirmed from the monthly bulletin published by the respective rating agency.

26.3.2.2 Unrated Security: Securities, which do not have a current or valid rating by an external rating agency, would be deemed as unrated securities.

26.3.2.3 Listed Debt Security: It is a security, which is listed on a stock exchange. If not so listed, it is an 'unlisted' debt security.

26.3.2.4 Non Performing Investment (NPI): An NPI (similar to a non performing advance) is one where:

(i) In respect of fixed / predetermined income securities, interest / principal / fixed dividend on preference shares (including maturity proceeds) is due and remains unpaid for more than 90 days.

(ii) The equity shares of a company have been valued at Re.1/- per company, on account of the non-availability of the latest balance sheet (as per the instructions contained in para 26 of the Annexure to circular DBS.FID.No.C-9/01.02.00/2000-01 dated November 9, 2000)

(iii) If any credit facility availed of by the issuer is classified as NPA in the books of the FI, investment in any of the securities, including preference shares issued by the same issuer would also be treated as NPI and vice versa. However, if only the preference shares are classified as NPI, the investment in any of the other performing securities issued by the same issuer may not be classified as NPI and any performing credit facilities granted to that borrower need not be treated as NPA.  

227 The preference share are subordinate to bank loans and therefore it is possible that the borrowing
26.3.3 Regulatory Requirements

26.3.3.1 The AIFs must not invest in unrated debt securities but only in rated ones, which carry a minimum investment grade rating from a credit rating agency registered with SEBI.

26.3.3.2 The investment grade rating should have been awarded by an external rating agency, operating in India, as identified by the IBA / FIMMDA. The list of such agencies would also be reviewed by IBA / FIMMDA at least once a year.

26.3.3.3 The AIFs should not invest in debt securities of original maturity of less than one-year other than Commercial Paper and Certificates of Deposits, which are covered under the RBI guidelines.

26.3.3.4 The AIFs should undertake usual due diligence in respect of investments in debt securities including the securities which do not attract these guidelines.

26.3.3.5 The AIFs should ensure that all fresh investments in debt securities are made only in listed debt securities of companies, which comply with the requirements of the SEBI, except to the extent indicated in paragraph 27.4.5 below.

26.3.3.6 The unlisted debt securities in which the AIFs may invest up to the limits specified in paragraph 27.4.5 below, should be rated and disclosure requirements as prescribed by the SEBI for listed companies should be followed by the issuer company.

26.3.4 Internal Assessments

Since the debt securities are very often a credit substitute, the AIFs would be well advised to:

(i) subject all their investment proposals relating to debt securities to the same standards of credit appraisal as for their credit proposals, irrespective of the fact that the proposed investments may be in rated securities;

(ii) make their own internal credit analysis and assign internal rating even in respect of externally rated issues and not to rely solely on the ratings of external rating agencies; and

(iii) strengthen their internal rating systems which should also include building up of a system of regular (quarterly or half-yearly) tracking of the financial position of the issuer with a view to ensuring continuous monitoring of the rating migration of the issuers / issues.

26.3.5 Prudential Limits

26.3.5.1 The total investment in the unlisted debt securities should not exceed 10 per cent of the AIFs' total investment in debt securities, which fall within the ambit of these guidelines, as on March 31 (June 30 in case of NHB), of the previous year. However, the investment in the following instruments will not be reckoned as 'unlisted debt securities' for monitoring compliance with the above prudential limits:

- Company is generating enough surplus to service the bank loan, but not to pay dividend on the preference shares. In addition, the non-payment of dividend on preference shares does not expose the borrowing entity to the risk of initiation of bankruptcy proceedings by the holders of the preference shares. Therefore, it is not necessary to downgrade loans in a situation where the investments in the preference shares had become non-performing investments. However, the converse is not true. If a loan becomes non-performing, the investment in preference shares being subordinate to bank loans will have certainly turned non-performing.
26.3.5.2 As a matter of prudence, the AIFIs should stipulate, with the approval of the Board, minimum ratings / quality standards and industry-wise, maturity-wise, duration-wise, issuer-wise, etc., exposure limits, for acquiring exposure in debt securities, which fall within the ambit of these guidelines, to address the concentration risk and the risk of illiquidity.

26.3.5.3 With effect from April 1, 2027, the total investment by AIFIs in liquid/short term debt schemes (by whatever name called) of mutual funds with weighted average maturity of portfolio of not more than 1 year, shall be subject to a prudential cap of 10 per cent of their net worth as on March 31 of the previous year. The weighted average maturity would be calculated as average of the remaining period of maturity of securities weighted by the sums invested.

26.3.6 Role of the Board of Directors

26.3.6.1 The AIFIs should ensure that their investment policies, duly approved by the Board, are formulated duly taking into account all the relevant aspects specified in these guidelines. The AIFIs should put in place proper risk management systems for capturing and analysing the risk in respect of investment in debt securities and for taking timely remedial measures. The AIFIs should also put in place appropriate systems to ensure that investment in privately placed instruments is made in accordance with the systems and procedures prescribed under the AIFI's investment policy.

26.3.6.2 The Board should put in place a monitoring system to ensure that the prudential limits prescribed in paragraphs 27.4.5 above are scrupulously complied with, including the system for addressing the breaches, if any, due to rating migration.

26.3.6.3 Boards of the AIFIs should review, twice a year, the following aspects of investment in debt securities covered by these guidelines:

(a) Total turnover (investment and divestment) during the reporting period;

(b) Compliance with the RBI-mandated prudential limits as also those prescribed by the Board for such investments;

(c) Rating migration of the issuers / securities held in the books of the AIFIs and consequent diminution in the portfolio quality; and

(d) Extent of non-performing investments in the fixed income category.

26.3.7 Reporting Requirements

26.3.7.1 In order to help in the creation of a central database on private placement of debt, the investing AIFIs should file a copy of all offer documents with all Credit Information Companies (CIC) which have obtained certificate of registration from RBI in terms of Section 5 of the Credit Information Companies (Regulation) Act, 2005. When the AIFIs themselves raise debt through private placement, they should also file a copy of the offer document with all the CICs.
26.3.7.2 Any default relating to payment of interest / repayment of instalment in respect of any privately placed debt should also be reported to the CIC by the investing FIs along with a copy of the offer document.

26.3.7.3 The AIFIs should also report to the RBI such particulars in respect of their investments in unlisted securities as may be prescribed by RBI from time to time.

26.3.8 Disclosures
The AIFIs should disclose the details of the issuer composition of investments made through private placement and the non-performing investments in the ‘Notes on Accounts’ of the balance sheet in the format furnished in Annex 22.

26.3.9 Trading and Settlement in Debt Securities
As per the SEBI guidelines, all trades, with the exception of the spot transactions, in a listed debt security, shall be executed only on the trading platform of a stock exchange.

In addition to complying with the SEBI guidelines, AIFIs should report their secondary market OTC trades in Corporate Bonds within 15 minutes of the trade on any of the stock exchanges (NSE, BSE and MCX-SX). All OTC trades in corporate bonds shall necessarily be cleared and settled through the National Securities Clearing Corporation Ltd. (NSCCL) or Indian Clearing Corporation Ltd. (ICCL) or MCX-SX Clearing Corporation Ltd. (MCX-SX CCL) as per the norms specified by the NSCCL, ICCL and MCX-SX CCL from time to time.

26.3.10 Holding of Instruments in Dematerialised Form
AIFIs are permitted to make investments in equity instruments and hold them in dematerialised form.

27. Internal Control System
27.1 Guidelines for Internal Control Systems
The AIFIs should observe the following guidelines for internal control system in respect of investment transactions:

(i) There should be a clear functional separation of (a) trading, (b) settlement, monitoring and control and (c) accounting.

(ii) In the interest of maintaining integrity and orderly conditions in the Government securities market, all SGL / CSGL account holders should adhere to the FIMMDA code of conduct while executing trades on NDS-OM and in the OTC market.

(iii) For every transaction entered into, the trading desk should prepare a deal slip which should contain data relating to nature of the deal, name of the counterparty, whether it is a direct deal or through a broker, and if through a broker, name of the broker, details of security, amount, price, contract date and time. The deal slips should be serially numbered and controlled separately to ensure that each deal slip has been properly accounted for. Once the deal is concluded, the dealer should immediately pass on the deal slip to the back office for recording and processing. For each deal, there must be a system of issue of confirmation to the counterparty. The timely receipt of requisite written confirmation from the counterparty, which must include all essential details of the contract should be monitored by the back office.
(iv) Once a deal has been concluded, there should not be any substitution of the counterparty bank / AIFI by another bank / AIFI by the broker, through whom the deal has been entered into; likewise, the security sold / purchased in the deal should not be substituted by another security.

(v) On the basis of vouchers passed by the back office (which should be done after verification of actual contract notes received from the broker / counterparty and confirmation of the deal by the counterparty) the Accounts Section should independently write the books of accounts.

(vi) Records of SGL transfer forms issued & received, should be maintained. Balances as per AIFIs' books should be reconciled at quarterly intervals with the balances in the books of PDOs. If the number of transactions so warrant, the reconciliation should be undertaken more frequently, say on a monthly basis. The internal audit department shall also periodically check this reconciliation. Any bouncing of SGL transfer forms issued by selling bank / AIFIs in favour of the buying bank / AIFI, should immediately be brought to the notice of the Department of Regulation (DOR) of the RBI by the buying bank / AIFI. Similarly, a record of BRs issued / received should be maintained. A system for verification of the authenticity of the BRs and SGL transfer forms received from other bank / AIFIs and confirmation of authorised signatories should be put in place.

(vii) AIFIs should put in place a reporting system to report to the top management, on a weekly basis, the details of transactions in securities, details of bouncing of SGL transfer forms issued by other bank / AIFIs and BRs outstanding for more than one month, and review of investment transactions undertaken during the period.

(viii) It is reiterated that AIFIs should not draw cheques on their account with RBI for third party transactions including inter-bank / AIFI transactions. For such transactions, bankers' cheques / pay orders should be issued.

(ix) The Internal Audit Department should audit the transactions in securities on an ongoing basis and monitor compliance with the laid down management policies and prescribed procedures and report the deficiencies directly to the management of AIFIs.

27.2 Dealing through Brokers

27.2.1 For engagement of brokers to deal in investment transactions, the AIFIs should observe the following guidelines:

(a) Transactions between one AIFI and another bank / AIFI should not be put through the brokers' accounts. The brokerage on the deal payable to the broker, if any (if the deal was put through with the help of a broker), should be clearly indicated on the notes / memorandum put up to the top management seeking approval for putting through the transaction and separate account of brokerage paid, broker-wise, should be maintained.

(b) If a deal is put through with the help of a broker, the role of the broker should be restricted to that of bringing the two parties to the deal together.

(c) While negotiating the deal, the broker is not obliged to disclose the identity of the counterparty to the deal. On conclusion of the deal, he should disclose the counterparty and his contract note should clearly indicate the name of the counterparty.

(d) On the basis of the contract note disclosing the name of the counterparty, settlement of deals between banks / AIFIs, viz. both fund settlement and delivery of security, should be directly between the banks / AIFIs and the broker should have no role to play in the process.
(e) With the approval of their top managements, AIFIs should prepare a panel of approved brokers, which should be reviewed annually, or more often if so warranted. Clear-cut criteria should be laid down for empanelment of brokers, including verification of their creditworthiness, market reputation, etc. A record of broker-wise details of deals put through and brokerage paid, should be maintained.

(f) A disproportionate part of the business should not be transacted through only one or a few brokers. AIFIs should fix aggregate contract limits for each of the approved brokers. A limit of 5% of total transactions through brokers (both purchase and sales) entered into by an AIFI during a year should be treated as the aggregate upper contract limit for each of the approved brokers. This limit should cover both the business initiated by an AIFI and the business offered / brought to the AIFI by a broker. FIs should ensure that the transactions entered into through individual brokers during a year normally did not exceed this limit. However, if for any reason it becomes necessary to exceed the aggregate limit for any broker, the specific reasons therefore should be recorded, in writing, by the authority empowered to put through the deals. Further, the Board should be informed of this, post facto.

(g) The concurrent auditors who audit the treasury operations should scrutinise the business done through brokers also and include it in their monthly report to the Chief Executive Officer of the AIFI. Besides, the business put through any individual broker or brokers in excess of the limit, with the reasons therefor, should be covered in the half-yearly review to the Board. These instructions also apply to subsidiaries of the AIFIs.

**Exception:** The above norm of 5% would not be applicable to AIFIs dealings through Primary Dealers.

### 27.2.2 Inter-bank securities transactions

Inter-bank securities transactions should be undertaken directly between banks / AIFIs and no AIFI should engage the services of any broker in such transactions.

**Exception:**

AIFIs may undertake securities transactions among themselves or with non-bank clients through members of the National Stock Exchange (NSE) and the Stock Exchange, Mumbai (BSE), where the transactions are more transparent. Transactions with non-bank clients, if such transactions are not undertaken on the NSE or BSE, should be undertaken by AIFIs directly, without use of brokers.

Although the Securities Contracts (Regulation) Act, 1956 defines the term ‘securities’ to mean corporate shares, debentures, Govt. securities and rights or interest in securities, for the purpose of the aforesaid exception, the term ‘securities’ would exclude corporate shares. Further, the Provident / Pension Funds and Trusts registered under the Indian Trusts Act, 1882, will be outside the purview of the expression ‘non-bank clients’ for the purpose of aforesaid exception.

### 27.3 Audit, Review and Reporting of Investment Transactions

#### 27.3.1 The AIFIs should follow the following instructions in regard to audit, review and reporting of investment transactions:

(a) AIFIs should undertake a half-yearly review (as of September 30 and March 31) of their investment portfolio, which should, apart from other operational aspects of investment portfolio, clearly indicate and certify adherence to laid down internal investment policy and procedures and Reserve Bank guidelines, and put up the same before their respective Boards within a month, i.e., by end-April and end-October.
(b) A copy of the review report put up to the AlFI's Board, should be forwarded to the Reserve Bank (concerned Regional Office of DOS) by November 15 and May 15 respectively. The half-yearly reviews of the investment portfolio of the FIs should be submitted to the Regional Offices of the Department of Supervision (DOS), within whose jurisdiction the Head Office of the AlFI concerned is located.

(c) In view of the possibility of abuse, treasury transactions should be separately subjected to concurrent audit by internal auditors and the results of their audit should be placed before the Chairman & Managing Director (CMD)/ Chairman of the AlFI once every month. The major irregularities observed in the concurrent audit report of the treasury transactions as also the position of compliance therewith should be incorporated in the half-yearly reviews of the investment portfolio to be submitted to the Regional Offices of the DOS.

27.4 Monitoring of Subsidiaries

27.4.1 Over the years, financial institutions have diversified their activities into financial services such as merchant banking, venture capital, mutual funds, investment banking, housing finance, etc. and some others are in the process of doing so. Some financial institutions have set up subsidiaries or companies in which they have a significant stake, to carry out such activities. The parent AlFIs have considerable stake in the health of these institutions and any setback in their working could have an adverse effect on the parent AlFIs. It is therefore, important that the AlFIs should keep themselves informed about their activities and exercise adequate supervision over them.

27.4.2 While the parent AlFI has to maintain "arms length" distance from subsidiaries / sponsored by it in regard to business parameters (such as taking undue advantage in borrowing / lending funds / transferring / selling / buying of securities at rates other than market rates, giving special consideration for securities transactions, overindulgence in supporting / financing the subsidiary, financing the bank's clients when the bank itself is not able or is not permitted to do so, etc.), it has to ensure that they operate in a healthy manner and in conformity with prudential requirements. The supervision by the parent AlFI should not, however, result in interference in the day to day management of the affairs of the subsidiary. With this end in view, AlFIs should evolve such strategies as may be appropriate in this regard. Some important points in this context are indicated below:

(i) The Board of the parent / sponsor AlFI should review the working of the subsidiaries at periodical intervals (say, once in six months) covering the major aspects relating to their functioning and give proper guidelines / suggestions for improvement, whenever considered necessary. Copies of such report along with the Board resolutions should be forwarded to RBI for information.

(ii) The parent AlFI should cause inspection / audit of the books and accounts of the subsidiaries at periodical intervals, as appropriate, and ensure that the deficiencies noticed are rectified without lapse of time. If the AlFI feels that its own inspection staff is not adequately equipped to undertake the inspection / audit, the task should be entrusted to outside agencies like firms of Chartered Accountants. In case there is technical difficulty for causing inspection / audit (e.g. on account of non-existence of an enabling clause in the Memorandum and Articles of Association of the subsidiary or Asset Management company), steps should be taken to amend the same suitably.

(iii) In cases of Asset Management Companies, monitoring should be done keeping in view the guidelines issued by the Securities and exchange Board of India (SEBI) from time-to-time.
(iv) Even in cases where the AIFI have equity participation by way of portfolio investment in companies offering financial services, they should review the working of the latter at least on an annual basis and put up the review note to the Board. A copy of the review note together with the Board resolution should be sent to us for our information.

27.4.3 In some cases, the companies have been promoted jointly by AIFI where each of them holds a substantial equity stake, though the promoted institution is not a subsidiary of any of the promoter financial institutions. In such cases, monitoring of the companies / institutions should be carried out by an AIFI having the majority or the largest stake in the promoted company / institution. In the case of equal shareholding among the promoter AIFIs, a suitable arrangement for the purpose should be devised amongst the promoter institutions and RBI may be advised of the name of the parent institution/s entrusted with the responsibility of such supervision for our information. Likewise, some companies may have been promoted by some AIFIs jointly with banks; in these cases also, a suitable arrangement for ensuring broad supervision should be devised by consent amongst all the equity holders, under advice to RBI.

28. Classification of Investments

28.1 Three Categories

The entire investment portfolio of the AIFIs will be classified under three categories viz. 'Held to Maturity', 'Available for Sale' and 'Held for Trading'. The securities acquired by the AIFIs with the intention to hold them till maturity will be classified under Held to Maturity. The securities acquired by the AIFIs with the intention to trade by taking advantage of the short-term price / interest rate movements etc. will be classified under Held for Trading. The securities, which do not fall within the above two categories, will be classified under Available for Sale.

28.2 Decision of Category at the Time of Acquisition

AIFIs should decide the category of the investment at the time of acquisition and the decision should be recorded on the investment proposals.

28.3 Held to Maturity

28.3.1 In keeping with the international norms, only debt securities are to be classified under the HTM category. The only exceptions permitted (as detailed at para 28.3.4 below) are the equity held in the subsidiaries and joint ventures, investments in preference shares in the nature of advance, non project related redeemable shares and the investments in units of close ended schemes of mutual funds only if such units are listed on the stock exchanges (as listed units of close ended schemes can be sold off in the market at any point of time; which should therefore be placed in AFS or HFT category).

28.3.2 The investments included under "Held to Maturity" should not exceed 25 per cent of the total investments. The AIFIs may include, at their discretion, under Held to Maturity category securities less than 25 per cent of total investment.

28.3.3 AIFI's aggregate investment in Tier II bonds issued by other FIs / banks shall be permitted up to 10 per cent of the total capital of the investing AIFI. The total capital for this purpose will be the same as that reckoned for the purpose of capital adequacy.

28.3.4 Computation of the 25% Ceiling

For computing the ceiling of 25% for the HTM category, the following type of investments should be excluded from the total investments and 25% of the balance amount would constitute the ceiling:
(a) Equity held in subsidiaries / Joint Ventures;
(b) Bonds / debentures and preference shares meeting the prescribed criteria and treated in the nature of advance;
(c) Other investments (equity shares) in the nature of advance which may be held in the AFS category.
(d) Re-capitalisation bonds received from the Government of India towards their own re-capitalisation requirement and held in investment portfolio.

28.3.5 Exclusions from the 25% Ceiling
The following investments will be included under "Held to Maturity" but will not be counted for the purpose of ceiling of 25% for the category:

(a) Investment in Subsidiaries and Joint Ventures
A Joint Venture would be an entity in which an AIFI (along with the holdings, if any, by its subsidiary) holds more than 25% of equity capital pursuant to a Joint Venture agreement duly entered into between / amongst the AIFI and the joint venture partner(s) for furtherance of a commercial objective. Besides, the companies floated by the AIFIs and in which the AIFI (along with the holdings, if any, by its subsidiaries) holds more than 25 per cent of the equity share capital, would also be classified as a Joint Venture. A distinction ought to be made between the transfer of an investment and transmission of an investment to an AIFI on account of the operation of a statute. Thus, if the shares of a corporate entity were transmitted to an AIFI on account of operation of a statute, and were not acquired of its own volition, such entities could be treated as a Joint Venture and the shares held therein classified and valued accordingly, as per the extant RBI norms.

Only such equity holdings, as also the equity held in subsidiaries, should be placed in the HTM category - and not where an AIFI, along with its subsidiaries, acquires equity in excess of 25% on account of conversion of loan, venture capital assistance, etc.

(b) The Investments in Debentures / Bonds, which are Deemed to be in the Nature of an Advance
The bonds and debentures should be treated in the nature of advance when:
* The debenture / bond is issued as part of the proposal for project finance and the tenor of the bond / debenture is for three years and above and
* The AIFI has a significant stake (i.e. 10% or more) in the issue and
* The issue is a part of private placement i.e. the borrower has approached the AIFI, and not part of a public issue where the AIFI has subscribed in response to an invitation.

(c) Preference Shares
The preference shares, other than convertible preference shares, on account of their definite maturity period, may be included in the HTM category, regardless of their period of maturity, subject to the following:
* The preference shares, other than convertible preference shares, acquired as a part of project financing and meeting the extant criteria for treating the bonds and debentures as 'in the nature of advance', should be treated in the nature of advance. Such preference shares would also not be counted for the purpose of the ceiling of 25% on the investments in the HTM category.
* The preference shares acquired by conversion of loans / debentures which qualify as in the nature of advance as per the extant criteria should also be treated in the nature of
advance and categorised and valued accordingly. Such preference shares would also not be counted for the purpose of the ceiling of 25% on the investments in the HTM category.

All other preference shares, if kept in the HTM category, should be reckoned within the ceiling of 25% for the investments in the HTM category. Such shares should be valued at the acquisition cost unless acquired at a premium, in which case they should be valued at the amortised cost. Any diminution, other than temporary, in value of these shares should be determined and provided for each investment individually and should not be set off against appreciation in other preference shares.

Profit on sale of investments in this category should be first taken to the Profit & Loss Account and thereafter be appropriated to the Capital Reserve Account. Loss on sale will be recognised in the Profit & Loss Account.

28.4   Available for Sale & Held for Trading

28.4.1 The AIFIs will have the freedom to decide on the extent of holdings under Available for Sale and Held for Trading categories. This will be decided by them after considering various aspects such as basis of intent, trading strategies, risk management capabilities, tax planning, manpower skills, capital position.

28.4.2 The investments classified under Held for Trading category would be those from which the AIFI expects to make a gain by the movement in the interest rates / market rates. These securities are to be sold within 90 days. If the AIFI is not able to sell the security within 90 days due to exceptional circumstances such as tight liquidity conditions, or extreme volatility, or market becoming unidirectional, the security should be shifted to the Available for Sale category.

28.4.3 Profit or loss on sale of investments in both the categories will be taken to the Profit & Loss Account.

28.5   Shifting among Categories

28.5.1 AIFIs should shift investments to / from Held to Maturity category with the approval of the Board once a year. Such shifting will normally be allowed at the beginning of the accounting year. No further shifting to / from this category will be allowed during the remaining part of that accounting year.

28.5.2 AIFIs should shift investments from Available for Sale category to Held for Trading category with the approval of their Board / ALCO / Investment Committee. In case of exigencies, such shifting may be done with the approval of the Chief Executive of the AIFI / Head of the ALCO, but should be ratified by the Board / ALCO.

28.5.3 Shifting of investments from Held for Trading category to Available for Sale category is generally not allowed. However, it will be permitted only under exceptional circumstances as mentioned above subject to depreciation, if any, applicable on the date of transfer, with the approval of the Board / ALCO / Investment Committee.

28.5.4 Transfer of scrips from one category to another, under all circumstances, should be done at the acquisition cost / book value / market value on the date of transfer, whichever is the least, and the depreciation, if any, on such transfer should be fully provided for.

28.5.5 If the value of sales and transfers of securities to / from HTM category exceeds 5 per cent of the book value of investments held in HTM category at the beginning of the year, AIFI should disclose the market value of the investments held in the HTM category and indicate the excess of book value over market value for which provision is not made. This disclosure is required to be made in 'Notes to Accounts' in AIFI's audited Annual Financial Statements.
29. **Valuation of Investments**

29.1 **Held to Maturity**

29.1.1 Investments classified under Held to Maturity category need not be marked to market and will be carried at acquisition cost unless it is more than the face value, in which case the premium should be amortised over the period remaining to maturity.

29.1.2 AIFIs should recognise any diminution, other than temporary, in the value of their investments in subsidiaries / joint ventures, which are included under Held to Maturity category and provide therefor. Such diminution should be determined and provided for each investment individually.

29.1.3 The need to determine whether impairment has occurred is a continuous process and the need for such determination will arise in the following circumstances:

(a) On the happening of an event which suggests that impairment has occurred. This would include:
   (i) the company has defaulted in repayment of its debt obligations.
   (ii) the loan amount of the company with any bank / AIFI has been restructured.
   (iii) the credit rating of the company has been downgraded to below investment grade.

(b) When the company has incurred losses for a continuous period of three years and the networth has consequently been reduced by 25% or more.

(c) In the case of new company or a new project when the originally projected date of achieving the break-even point has been extended i.e., the company or the project has not achieved break-even within the gestation period as originally envisaged.

29.1.4 When the need to determine whether impairment has occurred arises in respect of a subsidiary, joint venture or a material investment, the AIFI should obtain a valuation of the investment by a reputed/qualified valuer and make provision for the impairment, if any.

29.2 **Available for Sale**

29.2.1 The individual scrips in the available for Sale category will be marked to market at the year-end or at more frequent intervals. The net depreciation under each classification mentioned below should be recognised and fully provided for, the net appreciation under these classifications should be ignored. The book value of the individual securities would not undergo any change after the revaluation.

29.2.2 The classifications of investment will be (i) Government securities, (ii) Other approved securities, (iii) Shares, (iv) Debentures & Bonds, (v) Subsidiaries / joint ventures and (vi) Others (CP, Mutual Fund Units, etc.).

29.2.3 Securities under this category shall be valued scrip-wise and depreciation / appreciation shall be aggregated for each classification as above. Net depreciation, if any, shall be provided for. Net appreciation, if any, should be ignored. Net depreciation required to be provided for in any one classification should not be reduced on account of net appreciation in any other classification.
29.2.4 The provisions required to be created on account of depreciation in the Available for Sale category in any year should be debited to the Profit & Loss Account and an equivalent amount (net of tax benefit, if any) or the balance available in the Investment Fluctuation Reserve Account, whichever is less, shall be transferred from the Investment Fluctuation Reserve Account to the Profit & Loss Account. In the event provisions created on account of depreciation in the Available for Sale category are found to be in excess of the required amount in any year, the excess should be credited to the Profit & Loss Account and an equivalent amount (net of taxes, if any) should be appropriated to the Investment Fluctuation Reserve Account to be utilised to meet future depreciation requirement for investments in this category. The amounts debited to the Profit & Loss Account for provision and the amount credited to the Profit & Loss Account for reversal of excess provision should be debited and credited respectively under the head "Expenditure - Provisions & Contingencies". The amounts appropriated from the Profit & Loss Account and the amount transferred from the Investment Fluctuation Reserve to the Profit & Loss Account should be shown as 'below the line' items after determining the profit for the year.

29.3 Held for Trading

The individual scrips in the Held for Trading category will be revalued at monthly or at more frequent intervals and the net appreciation / depreciation under each of the six classifications referred to above will be recognised in the income account. The book value of the individual scrip will change with the revaluation.

29.4 General

In respect of securities included in any of the three categories where interest / principal is in arrears, AIFIs should not reckon income on the securities and should also make appropriate provisions for the depreciation in the value of the investment. AIFIs should not set-off the depreciation requirement in respect of these non-performing securities against the appreciation in respect of other performing securities.

29.5 Market Value

The 'market value' for the purpose of periodical valuation of investments included in the Available for Sale and the Held for Trading categories would be the market price of the scrip as available from the trades / quotes on the stock exchanges, price of SGL Account transactions, price list of RBI, prices declared by Primary Dealers Association of India (PDAI) jointly with the Fixed Income Money Market and Derivative Association of India (FIMMDA) periodically. In respect of unquoted securities, the procedure as detailed below should be adopted.

29.6 Valuation of Unquoted Securities

29.6.1 Central Government Securities

(i) The AIFIs should value the unquoted Central Government Securities on the basis of the prices / YTM rates put out by the FBIL at periodical intervals.

(ii) Treasury Bills should be valued at carrying cost.

(iii) For the limited purpose of valuation, all special securities issued by the Government of India, directly to the beneficiary entities, which do not carry SLR status, may be valued at a spread of 25 bps above the corresponding yield on Government of India securities. At present, such special securities comprise: Oil Bonds, Fertiliser Bonds, bonds issued to Unit Trust of India, IFCI Ltd., Food Corporation of India, the erstwhile Industrial Development Bank of India and the erstwhile Shipping Development Finance Corporation.
29.6.2 State Government Securities

Unquoted State Government securities will be valued applying the YTM method by marking it up by 25 basis points above the yields of the Central Government Securities of equivalent maturity put out by FBIL periodically.

29.6.3 Other 'Approved' Securities

The Other 'approved' Securities will be valued applying the YTM method by marking it up by 25 basis points above the yields of the Central Government Securities of equivalent maturity put out by FBIL periodically.

29.6.4 Debentures / Bonds

All debentures / bonds other than debentures / bonds which are in the nature of advance should be valued on the YTM basis. Such debentures may be of different companies having different ratings. These will be valued with appropriate mark-up over the YTM rates for Central Government securities as put out by FBIL periodically.

The mark-up will be graded according to the ratings assigned to the debentures / bonds by the rating agencies subject to the following:

(a) The rate used for the YTM for rated debentures / bonds should be at least 50 basis points above the rate applicable to a Government of India loan of equal maturity.

(b) The rate used for the YTM for unrated debentures / bonds should not be less than the rate applicable to rated debentures / bonds of equivalent maturity. The Mark-up for the unrated debentures / bonds should appropriately reflect the credit risk borne by the FI.

(c) Where interest / principal on the debenture / bond is in arrears, the provision should be made for the debentures / bonds as in the case of debentures / bonds treated as advances. The depreciation / provision requirement towards debentures where the interest is in arrears or principal is not paid as per due date, shall not be allowed to be set-off against appreciation against other debentures / bonds.

Where the debenture / bond is quoted and there have been transactions within 15 days prior to the valuation date, the value adopted should not be higher than the rate at which the transaction is recorded on the stock exchange.

29.6.5 Zero Coupon Bonds (ZCBs)

AIFIs should not invest in zero coupon bonds (ZCBs) unless the issuer builds up sinking fund for all accrued interest and keeps it invested in liquid investments / securities (Government bonds). It had come to our notice that banks / AIFIs are investing in bonds which carry very low coupons that are not market related and therefore are redeemed at maturity with substantial premium. These bonds therefore carry credit risk similar to ZCBs. AIFIs should not invest in such Low Coupon Bonds unless the issuer builds up a sinking fund to the extent of the difference in the accrued interest calculated on the basis of YTM applicable to the bond and the actual coupon payable on the bond and keeps it invested in liquid investments / securities (Government bonds). Further AIFIs should put in place conservative limits for their investments in such investments.

29.6.6 Preference Shares

A. Preference Shares not in the Nature of Advance

The valuation of preference shares should be on YTM basis. The preference shares will be issued by companies with different ratings. These will be valued with appropriate mark-up over the YTM rates for Central Government Securities put out by the FBIL periodically. The
mark-up will be graded according to the ratings assigned to the preference shares by the rating agencies subject to the following:

(a) The YTM rate should not be lower than the coupon rate/ YTM for a GoI loan of equivalent maturity.

(b) The rate used for the YTM for unrated preference shares should not be less than the rate applicable to rated preference shares of equivalent maturity. The mark-up for the unrated preference shares should appropriately reflect the credit risk borne by the bank.

(c) Investments in preference shares as part of the project finance may be valued at par for a period of two years after commencement of production or five years after subscription whichever is earlier.

(d) Where investment in preference shares is as part of rehabilitation, the YTM rate should not be lower than 1.5% above the coupon rate/ YTM for GoI loan of equivalent maturity.

(e) Where preference dividends are in arrears, no credit should be taken for accrued dividends and the value determined on YTM should be discounted by at least 15 per cent if arrears are for one year, and more if arrears are for more than one year. The depreciation/provision requirement arrived at in the above manner in respect of nonperforming shares where dividends are in arrears shall not be allowed to be set-off against appreciation on other performing preference shares.

(f) The preference share should not be valued above its redemption value.

(g) When a preference share has been traded on stock exchange within 15 days prior to the valuation date, the value should not be higher than the price at which the share was traded.

B. Preference Shares in the Nature of Advance

Preference shares in the nature of advance, as defined earlier should be valued by notionally extending to them the asset-classification of the outstanding loans of the issuing company and provision for depreciation in the value of preference shares made accordingly. In case the said loans are in the standard category, provision as per norms applicable to the standard loan assets would be required for the depreciation in the value of these shares. In case the loans are in the doubtful category, the preference shares held should be treated as an unsecured facility and fully provided for.

The preference shares acquired by conversion of loans / debentures in the nature of advance could be viewed as loan equivalent. Such shares would also carry an obligation of dividend payment.

Hence, in cases where there was no loan outstanding against a borrower company which had issued the shares, the record of dividend receipt on the preference shares should be looked into to determine the asset classification of the preference shares, as per record of recovery. For the purpose of asset classification, the due date of dividend payment on preference shares should be reckoned as the date of the closing of annual accounts of the company concerned.

Accordingly, if the dividend on preference shares is not received within 90 days from the date of closing of annual accounts of the issuing company, the shares should be treated as NPI and provided for accordingly.
C. Non Project Related and Redeemable Preference Shares

Such preference shares being eligible to be kept in the HTM category, within the 25% ceiling, could be valued at acquisition cost / amortised cost subject to provisioning for permanent diminution, if any, in value - for which payment of dividend would also be a relevant factor.

29.6.7 Equity Shares

A. Equity Shares in the Nature of Advance

The equity holdings in the nature of advance should be compulsorily placed in the 'Available For Sale' category. The equity shares should be considered to be in the nature of advances if the equity shares were issued as part of a proposal for project finance. Such equity should be valued by notionally extending to it the asset-classification of the outstanding loans of the issuing company and provision for depreciation in the value of equity made accordingly. In case the said loans are in the standard category, provision as applicable to the standard loan assets would be required for the depreciation in the equity value but in case the loans are in the doubtful category, the equity held should be treated as an unsecured facility and fully provided for.

The equity shares in the nature of advance, in cases where no loan against the company issuing the shares was outstanding, should be valued at market price, if listed and quoted, provided the latest market quotation was not more than 30 day-old as on the date of valuation.

The market price in such cases should not be based on a solitary or small value transaction but on price observed in a reasonable volume transaction, between two independent parties in an arm's-length relationship.

If such shares happen to be "thinly traded shares", they should be valued as per the extant norms.

The unquoted equity shares or where current quotations are not available, should be valued at "break up" value (without considering revaluation reserves, if any) derived from the company's latest balance sheet. In case the latest balance sheet is not available the shares are to be valued at rupee one per company.

B. Equity Shares not in the Nature of Advance

In respect of other investments in equity shares valuation should be done as per the market value which would be the market price of the scrip as available from the trades / quotes on the stock exchange. Those scrips for which current quotations are not available or where the shares are not quoted on Stock Exchange, should be valued at break-up value (without considering revaluation reserves, if any) which is to be ascertained from the company's latest balance sheet. In case the latest balance sheet is not available the shares are to be valued at rupee one per company.

Definitions

(a) Quoted Equity Share

An equity share, if the latest market quotation available, as at the date of valuation, is more than 30 day-old, it should be considered to be an unquoted investment and valued at break up value, as prescribed. Furthermore, the market price for valuation of quoted equity shares should not be derived from a solitary trade for a small- volume transaction but should be the price observed for a reasonable volume of transaction between two independent parties in an arms-length relationship.
(b) Thinly-Traded Shares / equity related securities’ (such as convertible debentures, equity warrants, etc.) should be identified and valued as detailed below.

Thinly traded equity shares / equity related securities would be those for which the trading in a month is for less than Rs.5 lakh or the total trading volume is less than 50,000 shares.

Where the stock exchange concerned identifies such securities as per the foregoing criteria and publishes / provides such information for the preceding calendar month along with the daily quotations, such latest quotations should be used for valuation of such shares.

In case the equity is listed on a stock exchange, which does not provide such information, the FIs should undertake their own analysis as per above criteria to determine whether the share is a thinly traded one. If so, the latest available quotation should be used for valuation.

**The Age of the "Latest" Balance Sheet**

In respect of companies, which close their annual accounts on dates other than 31 March, the latest balance sheet used for determining the break up value should not be older than 21 months, as on the date of valuation.

(The period of 21 months was introduced as against 12 months in view of certain operational problems pointed out by FIs in case of companies which close their annual accounts on dates other than 31st March.)

**29.6.8 Mutual Funds Units**

Investment in quoted Mutual Fund Units should be valued as per Stock Exchange quotations. Investment in non-quoted Mutual Fund Units is to be valued on the basis of the latest re-purchase price declared by the Mutual Fund in respect of each particular Scheme. In case of funds with a lock-in period, where repurchase price / market quote is not available, Units could be valued at NAV. If NAV is not available, then these could be valued at cost, till the end of the lock-in period.

**29.6.9 Commercial Paper**

Commercial paper should be valued at the carrying cost.

**29.6.10 Prudential Guidelines - Investment in Venture Capital Funds (VCFs)**

It is observed that the exposure of AIFIs to Venture Capital Funds (VCFs) has been steadily increasing over the last few years. While significance of venture capital activities and need for AIFIs’ involvement in financing of venture capital funds is well recognized, it is also considered important to address the relatively higher risks inherent in such exposures. In view of this, we have reviewed the entire issue of financing of VCFs and revised the prudential framework governing AIFIs’ exposure to VCFs. AIFIs are advised to comply with the prudential requirements relating to financing of VCFs set out in the Annex 23.

**30. Repo Accounting**

AIFIs may refer to Para 13 of directions FMRD.DIRD.01/14.03.038/2018-19 dated July 24, 2018 on Repurchase Transactions (Repo) (Reserve Bank) Directions, 2018 for guidelines on Repo Accounting.

Prudential Guidelines on AIFI’s Investment in Venture Capital Funds (VCF)

1. Prudential exposure limits

1.1 All exposures to VCFs (both registered and unregistered) will be deemed to be on par with equity and hence will be reckoned for compliance with the capital market exposure ceilings (ceiling for direct investment in equity and equity linked instruments as well as ceiling for overall capital market exposure).

2. Valuation and classification of AIFIs’ investment in VCFs

2.1 The quoted equity shares / bonds / units of VCFs in the AIFI’s portfolio should be held under Available for Sale (AFS) category and marked to market preferably on a daily basis, but at least on a weekly basis in line with valuation norms for other equity shares as per existing instructions.

2.2 AIFIs’ investments in unquoted shares / bonds / units of VCFs made after December 1, 2010 will be classified under Held to Maturity (HTM) category for initial period of three years and will be valued at cost during this period. For the investments made before issuance of these guidelines, the classification would be done as per the existing norms.

2.3 For this purpose, the period of three years will be reckoned separately for each disbursement made by the AIFI to VCF as and when the committed capital is called up. However, to ensure conformity with the existing norms for transferring securities from HTM category, transfer of all securities which have completed three years as mentioned above will be effected at the beginning of the next accounting year in one lot to coincide with the annual transfer of investments from HTM category.

2.4 After three years, the unquoted units / shares / bonds should be transferred to AFS category and valued as under:

(i) Units:
In the case of investments in the form of units, the valuation will be done at the Net Asset Value (NAV) shown by the VCF in its financial statements. Depreciation, if any, on the units based on NAV has to be provided at the time of shifting the investments to AFS category from HTM category as also on subsequent valuations which should be done at quarterly or more frequent intervals based on the financial statements received from the VCF. At least once in a year, the units should be valued based on the audited results. However, if the audited balance sheet / financial statements showing NAV figures are not available continuously for more than 18 months as on the date of valuation, the investments are to be valued at Rupee 1.00 per VCF.

(ii) Equity:
In the case of investments in the form of shares, the valuation can be done at the required frequency based on the break-up value (without considering ‘revaluation reserves’, if any) which is to be ascertained from the company’s (VCF’s) latest balance sheet (which should not be more than 18 months prior to the date of valuation). Depreciation, if any on the shares has to be provided at the time of shifting the investments to AFS category as also on subsequent valuations which should be done at quarterly or more frequent intervals. If the latest balance sheet available is more than 18 months old, the shares are to be valued at Rupee 1.00 per company.
(iii) Bonds:
The investment in the bonds of VCFs, if any, should be valued as per prudential norms for classification, valuation and operation of investment portfolio by AIFIs issued by RBI from time to time.

3. Risk Weight and capital charge for market risk for exposures in VCFs

3.1 Shares and units of VCFs
Investments in shares / units of VCFs may be assigned 150% risk weight for measuring the credit risk during first three years when these are held under HTM category. When these are held under or transferred to AFS, the capital charge for specific risk component of the market risk as required in terms of the present guidelines on computation of capital charge for market risk, may be fixed at 13.5% to reflect the risk weight of 150%. The charge for general market risk component would be at 9% as in the case of other equities.

3.2 Bonds of VCFs
Investments in bonds of VCFs will attract risk weight of 150% for measuring the credit risk during first three years when these are held under HTM category. When the bonds are held under or transferred to AFS category, these would attract specific risk capital charge of 13.5%. The charge for general market risk may be computed as in the case of investment in any other kind of bonds as per existing guidelines.

3.3 Exposures to VCFs other than investments
The exposures to VCFs other than investments may also be assigned a risk weight of 150%.

4. Exemption under guidelines relating to non-Government debt securities

As per extant guidelines relating to non-Government debt securities, an AIFI's investment in unlisted non-Government debt securities should not exceed 10 per cent of its total investment in non-Government debt securities as on March 31, of the previous year. Further, AIFIs must not invest in unrated non-SLR securities. The investments in unlisted and unrated bonds of VCFs will be exempted from these guidelines.

5. RBI approval for strategic investments in VCFs by FIs
AIFIs should obtain prior approval of RBI for making strategic investment in VCFs i.e. investments equivalent to more than 10% of the equity / unit capital of a VCF.

However, in case of SIDBI the following guidelines will be applicable:

(i) SIDBI's investment limit to VCF without our prior approval is increased from existing 15% to 20% subject to the proviso that they will maintain a capital charge of 175%. For specific risk where SIDBI's CME is between 20% and 30%, the capital charge will be at 200% and for CME above 30% and up to 40% the capital charge on specific risk will be 225%.

(ii) SIDBIs investment in any venture fund may be reckoned as MSME dedicated, as long as the Fund invests at least twice the contribution made by SIDBI or 50% of its funds, whichever is more to MSMEs.
Chapter VI - Resource Raising Norms

31. Introduction

AIFIs play an important role in the financial markets and facilitate raising of funds, allocation of resources, etc. Initially, the RBI had prescribed instrument-wise limits for mobilisation of resources by the select AIFIs through the specified instruments. The instrument-wise ceilings were replaced by an “umbrella limit” linked to the ‘net owned funds’ of the AIFI concerned, which constituted the overall ceiling for borrowing by the AIFI through the specified instruments. It has been decided to introduce Leverage Ratio for the AIFIs under Basel III Capital Regulations and dispense with the limits on the borrowings by AIFIs, including the umbrella limit. However, the resource mobilization by the AIFIs through the specified instruments shall continue to be governed by the norms prescribed in paragraph 32 of this Chapter.

32. Norms for Resource Raising

The terms and conditions relating to resource mobilization through each of the specified instruments viz. term deposits, term money borrowings, certificates of deposits (CDs) and commercial papers (CPs) are set out below.

32.1 Term Deposits

<table>
<thead>
<tr>
<th>Item</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maturity Period</td>
<td>1 to 5 years.</td>
</tr>
<tr>
<td>Interest Rates</td>
<td>AIFIs are free to fix the interest rates.</td>
</tr>
<tr>
<td>Minimum Size</td>
<td>Rs.10,000/-</td>
</tr>
<tr>
<td>Brokerage</td>
<td>1% of the deposits accepted.</td>
</tr>
</tbody>
</table>
| Premature Withdrawal  | (i) In the case of premature withdrawal before completion of one year due to death of depositor, medical exigencies, educational expenditure and other such reasons, the following norm should be applied:  

(a) Premature withdrawal before six months - no interest to be paid  

(b) Premature withdrawal between six months and one year - interest to be paid at the rate of average of the minimum and maximum saving deposit rates as published in the weekly statistical supplement (WSS) to the monthly RBI Bulletin.  

(ii) Beyond 1 year, AIFIs have freedom to fix their own penal rate of interest on premature withdrawal of deposits |
| Rating                | Rating from the rating agencies approved by the SEBI is mandatory.        |
| Other terms and conditions | AIFIs should not provide any loan against the term deposits accepted. |

32.2 Term Money Borrowings

<table>
<thead>
<tr>
<th>Item</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maturity Period</td>
<td>Not less than 3 months and not exceeding 6 months.</td>
</tr>
<tr>
<td>Interest Rates</td>
<td>AIFIs are free to fix interest rates.</td>
</tr>
<tr>
<td>Borrowings from</td>
<td>AIFIs are eligible to borrow ‘term money’ from Scheduled Commercial Banks and Co-operative banks only.</td>
</tr>
</tbody>
</table>
32.3 Certificates of Deposit (CDs)

AIFIs shall be governed by the instructions contained in ‘Master Direction on Money Market Instruments: Call/Notice Money Market, Commercial Paper, Certificates of Deposit and Non-Convertible Debentures (original maturity up to one year)’ issued vide circular reference FMRD.Master Direction No. 2/2016-17 dated July 7, 2016.

32.4 Commercial Papers (CPs)

AIFIs shall be governed by the instructions contained in Reserve Bank Commercial Paper Directions, 2017 issued vide circular reference FMRD.DIRD.2/14.01.002/2017-18 dated August 10, 2017.

33. Norms regarding Issue of Bonds / Debentures

33.1 AIFIs are not required to seek issue-wise prior approval/registration from the RBI for raising resources by way of issue of bonds, whether by public issue or through private placement, subject to the fulfillment of the following conditions:

i) The minimum maturity of the bond should be 3 years;

ii) In respect of bonds having call / put or both options, the same should not be exercisable before the expiry of one year from the date of issue of bonds;

iii) No ’Exit’ option on the bonds should be offered before the end of one year, from the date of issue.

33.2 In case of floating rate bonds, AIFIs should seek prior approval from the Reserve Bank, in regard to ’reference rate’ selected and the methods of floating rate determination. The same is not required for subsequent individual issues so long as the underlying reference rate and method of floating rate determination remain unchanged.

33.3 AIFIs should take note to comply with the prudential requirements of other regulatory authorities such as SEBI, etc.
Chapter VII - Exemptions and Interpretations

34. Exemptions
The Reserve Bank of India may, if it considers necessary for avoiding any hardship or for any other just and sufficient reason, grant extension of time to comply with or exempt any AIFI, from all or any of the provisions of these Directions either generally or for any specified period, subject to such conditions as the Reserve Bank of India may impose.

35. Interpretations
For the purpose of giving effect to the provisions of these Directions, the Reserve Bank of India may, if it considers necessary, issue necessary clarifications in respect of any matter covered herein and the interpretation of any provision of these Directions given by the Reserve Bank of India shall be final and binding on all the parties concerned.
